- D. The rider or policy form should specify the actions required, if any, to prevent policy termination if premium or interest expected to be capitalized would result in a total accelerated benefit payment exceeding the percentage or dollar maximum amount specified in the rider or policy form. Any such excess may be required to be paid in cash within an appropriate grace period in order to prevent policy termination. The rider or policy form may also specify that future premiums or interest becoming due must be paid in cash. If not specifically addressed, the rider or policy should remain in force and be administered with no change from the premium or interest requirement that existed immediately prior to the time at which the maximum was reached and the accelerated benefit would not be increased beyond the maximum specified in the rider or policy form.
- E. The rider or policy form may specify whether the accelerated benefit provision would apply to the original base insurance policy death benefit or the current insurance policy death benefit. If not specifically addressed, the rider or policy form should be administered as if maximums are automatically increased, but not automatically decreased.
- F. The rider or policy form may specify that an accelerated benefit is not available unless established prior to the policyholder's election of or lapse to ETI or RPU. If not specifically addressed, the rider or policy forms should be administered to provide an accelerated benefit after election of or lapse to ETI or RPU.
- G. The rider or policy form may specify that an accelerated benefit is not available if the policy has an irrevocable beneficiary or is assigned when accelerated benefits are initially claimed. Alternatively, the irrevocable beneficiary or assignee must provide a signed acknowledgement of concurrence for payout. The rider or policy form may specify that the policy may not be assigned (except to the insurer) after an accelerated benefit has been paid.

Actuarial Guideline XXVIII

STATUTORY CLAIM RESERVES FOR GROUP LONG-TERM DISABILITY CONTRACTS WITH A SURVIVOR INCOME BENEFIT PROVISION

Background

Many of the major writers of group long-term disability income insurance have included survivor benefits in such contracts. Provisions related to the survivor benefit include minimum disability periods, benefit amounts defined in terms of a number of months of disability benefits and a specified percentage of the monthly disability benefit.

This benefit is sometimes overlooked in the valuation process or ignored as being trivial in amount.

Drafting Note: Please see the 1990 "Proceedings," Vol. 2, Pages 995-999, and the 1991 "Proceedings," Vol. 1B, Pages 1321-1328.

Text

Claim reserves for survivor income benefits contained in group long-term disability contracts must be established based on the design of the survivor income benefit including the minimum period of disability before the spouse of a disabled person becomes eligible for a survivor income benefit and the amount of the benefit. A suitable approximation to the sum of the reserves for the basic disability benefit and the reserve for the survivor income benefit can be calculated by computing the reserve for the basic disability at an interest rate less than the maximum valuation interest rate.

Before any approximation can be accepted, rigorous testing of the approximation to the combined reserves for both the basic disability claim and the survivor income benefit must be performed. Tests indicated that basic disability reserves and survivor income benefit based on a 12-month disability requirement and a maximum survivor income benefit duration of 24 months with a survivor income benefit of .667 of the disability income with all reserves based on a valuation interest rate of 5.5% can be adequately approximated by basic disability reserves alone but calculated at a 3.5% valuation interest rate.

Actuarial Guideline XXIX

GUIDELINE CONCERNING RESERVES OF COMPANIES IN REHABILITATION

Preamble

The life insurance and annuity contracts of life insurance companies can be restructured by court order in rehabilitation proceedings. The contract restructuring may take the form of reduction in account values and/or guaranteed interest crediting premiums. Typically, the court order imposes restrictions on surrender of the contract while the company is in rehabilitation. These restrictions can include bans on surrenders while a rehabilitation plan is being developed and temporary limitations on the cash that can be obtained upon surrender. These restrictions are intended to prevent *en masse* surrenders while the company faces liquidity problems.

Several issues have arisen as to the interpretation of the Standard Valuation Law in these circumstances. The issues relate to the interpretation of the Commissioners' Reserve Valuation Method (CRVM) and the Commissioners' Annuity Reserve Valuation Method (CARVM), the determination of the guaranteed nonforfeiture benefits provided in the restructured contract and identification of the issue date of the contract after restructuring.

The Standard Valuation Law does not specifically address minimum reserve requirements after a contract has been restructured by court order. The minimum reserve requirements should be interpreted in the context of court-ordered contract restructuring to result in the most appropriate reserves under the particular circumstances. In general, this should be left to the regulators to determine.

Guideline

The phrase "future guaranteed benefits, including guaranteed nonforfeiture benefits," as used in CARVM, includes the cash surrender values based on contractual guarantees after reduction for any surrender charges available under the contract. In general, the value of future guaranteed benefits under CARVM may not be reduced by contingent surrender charges which may not be available upon cash surrender. See *Guideline Covering the Commissioners' Annuity Reserve Valuation Method (CARVM) (1985)*.

Whether or not a court-imposed temporary restriction on the availability of cash on surrender is taken into account under CARVM depends upon whether the rehabilitation plan specifies that the restriction is a reduction in the guaranteed nonforfeiture benefits in the restructured contracts. If the rehabilitation plan imposes a distinct temporary charge to ensure liquidity as opposed to changing common surrender charges that are historically used to determining nonforfeiture benefits, the temporary charges will not reduce guaranteed nonforfeiture benefits for purposes of CARVM.

A similar rule applies for purposes of reporting those reserves on life insurance contracts entitled "For surrender values in excess of reserves otherwise required."

For life insurance contracts, CRVM does not dictate that a particular method must be applied after a contract has been restructured. In the case of policies providing for a varying amount of insurance or requiring the payment of varying premiums, reserves are calculated by a method consistent with CRVM applicable to policies providing for a uniform amount of insurance and requiring the payment of uniform premiums.

A method consistent with CRVM adopted for purposes of a rehabilitation program should consider the valuation bases and expense allowance prior to restructuring as well as after restructuring. Depending upon the types of changes to the restructured contract, it may or may not be appropriate to take into account the guaranteed benefits and premium structure prior to restructuring.

The issue date for purposes of determining the applicable mortality tables and interest rates also depends on the circumstances. For example, it may be appropriate to treat annuity contracts as newly issued so that reserves are required to be recomputed using more current discount rates. However, in the same rehabilitation plan it may be inappropriate to treat a restructured level premium whole life contract as newly issued. Accordingly, whether a contract is treated as having a new issue date after contract restructuring depends upon the terms of the rehabilitation plan and the restructured contracts. In general, contracts are not treated as newly issued unless the rehabilitation plan or state filing for the restructured contracts so provides.

Similarly, the appropriate CRVM expense allowance will depend upon the terms and the intent of the restructuring and rehabilitation plan. Depending upon the types of changes to the restructured contract, it may be appropriate to carry forward an unamortized expense allowance based on original policy date. In other cases, a new unamortized expense allowance would be calculated as of the restructure date. In general, a new unamortized expense allowance is not calculated unless the rehabilitation plan or the state filing for the restructured contract so provides.

Actuarial Guideline XXX

GUIDELINE FOR THE APPLICATION OF PLAN TYPE TO GUARANTEED INTEREST CONTRACTS (GICs) WITH BENEFIT RESPONSIVE PAYMENT PROVISIONS USED TO FUND EMPLOYEE BENEFIT PLANS

Background Material

Guaranteed Interest Contracts (GICs) that are used to fund employee benefit plans often times contain a provision that allows individual participants to voluntarily move funds on a book value basis to other investment opportunities. These contracts also allow for the withdrawal of funds on a book value basis to provide employee benefits such as a death benefit to a surviving beneficiary, disability benefits and benefits paid upon bona fide termination of employment. In the situations described above, the individual participant is to be distinguished from the policyholder. Typical contractual language is as follows:

1. Withdrawal for Redirection of Investments - Subject to the provisions of Subsection___above, the contract owner shall direct the withdrawal and transfer to the contract owner of the pro rata amounts from the accumulation accounts for the purpose of redirecting an employee investment to an equity fund in accordance with the provision of the Plan.
2. Withdrawal for Plan Benefit Payments - Subject to the provisions of Subsection___above, the contract owner shall direct the withdrawal and transfer to the contract owner of the pro rata amounts from the accumulation account due to distribution made to participants (or to their beneficiaries, in case of the participant's death) under the Plan.

Both examples of contractual language make reference to the "provisions of the Plan." Plan provisions reduce the disintermediation (C-3) risk, from the insurance company standpoint, associated with GICs. For example, plan provisions may restrict the opportunity for the 401 (k) plan participant to move funds from the GIC option to a competing "guarantee of principal" option within the plan.

The Standard Valuation Law utilizes a concept known as Plan Type to distinguish between different levels of voluntary withdrawal rights by policyholders. Voluntary withdrawal rights are contractual policyholder rights which may be exercised at the option of the policyholder and do not include such items as scheduled contractual payouts or payouts upon termination. The greater the level of voluntary withdrawal right afforded to the policyholder, the more conservative is the resulting valuation interest rate. Plan Types are designated in the Standard Valuation Law as with Plan Type A, Plan Type B or Plan Type C and are defined as follows:

1. Plan Type A is a plan under which the policyholder may not withdraw funds, or may withdraw funds at any time but only (a) with an adjustment to reflect changes in interest rates or asset values since receipt of the funds by the insurance company, (b) without such an adjustment but in installments over five years or more, or (c) as an immediate life annuity.
2. Plan Type B is a plan under which the policyholder may not withdraw funds before expiration of the interest rate guarantee, or may withdraw funds before such expiration but only (a) with an adjustment to reflect changes in interest rate or assets values since receipt of the funds by the insurance company, or (b) without such an adjustment but in installments over five years or more. At the end of the interest rate guarantee, funds may be withdrawn without such adjustment in a single sum or installments over less than five years.

3. Plan Type C is a plan under which the policyholder may withdraw funds before expiration of the interest rate guarantee in a single sum or installments over less than five years either (a) without adjustment to reflect changes in interest rates or asset values since receipt of the funds by the insurance company, or (b) subject only to a fixed surrender charge stipulated in the contract as a percentage of the funds.

Text

For purposes of the application of the Standard Valuation Law to Guaranteed Interest Contracts (GICs) with benefit responsive provisions, the withdrawal of funds at book value for the purpose of redirecting or withdrawing an employee investment shall be considered a withdrawal by the policyholder unless the underlying plan or GIC contain written provisions which are designed to reduce the C-3 risk to the insurance company. As an example, a provision which meets this criteria would include both the following:

1. No direct transfer to competing funds, whether such funds are alternate funds of the insurance company or not. This provision prohibits direct transfer of funds from the GIC option to a competing plan option that offers either a guarantee of principal or to an option in which the risk of loss of principal is small such as a money market fund or short-term bond fund. Any transfer to such an option must first go through a non-competing plan option and reside there for at least 90 days or three months.

and

2. For GICs that fund plan investment options where interest is allocated to plan participants based on how much of their account balance is in each particular interest rate "cell," participants are not allowed to redirect any of the balance they have in a GIC funding a particular cell to a competing fund until the GIC's maturity date.

In addition, the valuation actuary must be satisfied that the GIC provisions designed to reduce the C-3 risk are administered by the insurer in the designed manner.

This requirement may be fulfilled by obtaining from the appropriate insurance company officer a certificate of intent regarding the insurance company administration of the provisions.

In addition, the valuation actuary must periodically review the actual experience under the contract to verify the appropriateness of the Plan Type assumption with reference to this Guideline.

Actuarial Guideline XXXI

VALUATION ISSUES VS. POLICY FORM APPROVAL

Background

Occasionally, the NAIC Life and Health Actuarial Task Force addresses valuation (reserve) issues related to a policy form or benefit design that has not been accepted or approved by a particular state. The development of reserving methods or providing guidance concerning reserve questions for such policy forms is necessary because the annual statement filed in each state, including states for which a particular policy form has not been approved for use, must reflect appropriate reserve for all policy forms and associated benefits.

Text

The adoption of an Actuarial Guideline by the NAIC Life and Health Actuarial Task Force dealing with a reserve issue associated with a particular policy form or benefit does not represent an endorsement for the approval of the particular policy form or benefit.

Not for Distribution

Actuarial Guideline XXXII

RESERVE FOR IMMEDIATE PAYMENT OF CLAIMS

Background Material

Section 5 Reserve Valuation Method—Life Insurance and Endowment Benefits of the NAIC Standard Valuation Law refers to an annual premium in defining the commissioners reserve valuation method. However, it has been general practice to hold an additional reserve where fractional premiums are paid and any fractional premium not yet due in the policy year of death is waived and to hold a further additional reserve for the refund of any premium paid beyond the end of the month in the policy year of death. These additional reserves are called for in the Miscellaneous Section of Exhibit 8 of the annual statement. These additional reserves are generally included in the basic reserves where an insurer uses an assumption of continuous payment of premiums.

Although Section 7 of the NAIC Standard Nonforfeiture Law for Life Insurance explicitly permits in calculating nonforfeiture “the assumption that any death benefit is payable at the end of the policy year of death,” there is no similar explicit permission to use such assumption in the NAIC Standard Valuation Law. The annual statement instructions are silent on any adjustment. A long time ago some life insurance policies provided that claims would be paid at the end of the policy year of death. However, for many years many policies have provided that claims will be paid immediately upon satisfactory proof of death. In fact, some states require that interest shall accrue from date of death.

Many insurers have held a reserve for immediate payment of claims either by an adjustment to curtable reserves or by including provision therefore in the basic reserves calculated on a continuous payment of claims basis.

Text

RESERVES FOR IMMEDIATE PAYMENT OF CLAIMS

- I. Reserves based on either fully continuous functions or on semi-continuous functions where the death portion reflects approximately one half of one year’s valuation rate of interest are considered as making appropriate provision for immediate payment of claims.
- II. Where the basic reserves are based on curtable functions with no provision for immediate payment of claims:
 1. For any policy where the contract calls for payment of death claims at the end of the policy year in which death occurs, no adjustment to curtable reserves need be made.
 2. For any policy where the contract calls for payment of death claims immediately upon receipt of due proof of death of the insured, the death portion of curtable reserves shall be increased by one third of one year’s valuation rate of interest. (Approximations may be used to split the total curtable reserves into death portion and the pure endowment portion.)
 3. For any policy where the contract provides for payment of interest on the death proceeds from date of death to date of payment, the death portion of curtable reserves shall be increased by one half of one year’s valuation rate of interest. (Approximations may be used to split the total curtable into the death portion.)

- III. Where an insurer pays interest on death proceeds at an earlier point than as required by contract, it is appropriate that the statutory formula reflect such practice.
- IV. Where the actual formula reserves are more conservative than minimum statutory formula reserves, an insurer using curtate functions without provision for immediate payment of claims must demonstrate compliance with minimum statutory formula reserves adjusted in accordance with II above.
- V. This guideline shall apply to all new life insurance policies issued beginning January 1 following the date the guideline is adopted.
- VI. The guideline shall be applicable to policies issued prior to the date the guideline is adopted with any additional reserve graded in as follows for the years following the date the guideline is adopted:
 1. First year 20%
 2. Second year 40%
 3. Third year 60%
 4. Fourth year 80%
 5. Fifth and later years 100%

Actuarial Guideline XXXIII

DETERMINING CARVM RESERVES FOR ANNUITY CONTRACTS WITH ELECTIVE BENEFITS

Background Information

1. Introduction

The Standard Valuation Law (SVL) defines the methods and assumptions which are to be used in determining minimum statutory formula reserves. This law establishes the standards for annuity contracts (which therefore includes any annuity riders or endorsements, and any or all components of which, such as premiums, benefits, contract charges, primary or secondary accumulation values or other components, either relating to annuity benefits provided by the contract or providing separate annuity benefits) and includes the criteria for the interest and mortality assumptions to be used in determining minimum formula contract reserves. The 1980 revisions to the SVL provide for the maximum statutory formula reserve interest rate to be determined through a dynamic formula in order to incorporate changes in economic conditions, liquidity needs and the risks inherent in certain types of contracts.

The SVL defined methodology for annuity contracts, the commissioners annuity reserve valuation method (CARVM), requires that reserves be the greatest of the respective excesses of the present values, at the date of valuation, of the future guaranteed benefits, including guaranteed nonforfeiture benefits, provided for by such contracts at the end of each respective contract year, over the present value, at the date of valuation, of any future valuation considerations derived from future gross considerations, required by the terms of such contracts, that become payable prior to the end of such respective contract year. Such reserves are established to adequately fund all guaranteed contract obligations, including those obligations which are optional to the contract owner and which may not have yet been elected.

Industry practices and methods of reserving under CARVM for annuity contracts with multiple benefit streams have not been found to be consistent. These range from a low reserve equal to the cash surrender value to a reserve representing the greatest actuarial present value of the future benefit streams under all potential annuity or other nonforfeiture benefit election options using a conservative rate of interest.

The major purpose of this Actuarial Guideline is to provide clarification and consistency in applying CARVM to annuities with multiple benefit streams. Some of the areas requiring clarification include: the valuation of annuitization benefits; the application of incidence rates in CARVM; the application of the integrated benefit stream approach in CARVM; how to determine valuation interest rates and mortality tables for multiple benefit streams; and certain practical considerations regarding multiple benefit streams.

2. Annuitization Benefits

Varying forms of contracts provide that the cash value available to the contract owner is less than the amount available to purchase an annuitization option under the terms of the contract.

For purposes of this Actuarial Guideline, “accumulation fund” is defined as the policy value which is used to purchase an annuity option under the terms of the contract.

Frequently there are significant discontinuities in the reserves, both upward and downward, at the time a settlement option is elected, between the reserve held immediately prior to the settlement as

compared to the reserve required for the greatest actuarial present value of the annuitization option elected.

One of the most significant reasons for discontinuities in the reserve patterns at the time of election is the difference in the SPIA valuation rate available at the time of election as compared to the valuation rate used based on the date of issue of the original SPDA contract. Another significant reason is the difference between the guaranteed purchase rate contained in the contract and used for reserve development as compared to the rate actually used to purchase the annuity option at the time of election.

3. Application of Incidence Rates in CARVM

Since CARVM was adopted, there has been an increase in the types of benefits offered under certain annuity contracts, including enhanced death benefits, nursing home benefits, and various partial withdrawal provisions, including some dependent on values other than those used to determine cash values and which may allow for benefits to continue past the point where the cash value is zero. For some of these benefit types, the SVL is not explicit as to whether incidence tables prescribed under the SVL may be used to determine such benefits, versus requiring consideration of all contract owner options available under the contract, and choosing the set of incidence rates which produce the greatest present value.

4. Integrated Benefit Stream Approach

CARVM requires that reserves be based on the greatest present value of all potential future guaranteed benefits. For annuity contracts offering more than one type of potential benefit stream, the SVL is not explicit regarding whether or how blends of more than one type of benefit must be considered under CARVM.

Under the integrated benefit stream approach, any potential benefit stream must be considered, including blends reflecting the interaction of more than one type of benefit. Such potential benefit streams include all types of benefits for which the greatest present value concept is required. Additionally, adjustments must be made to all such potential benefit streams to reflect those benefit types for which prescribed incidence tables are required (e.g., death benefits).

For example, consider an annuity contract offering surrender, annuitization and death benefits. Potential benefit streams that would be considered include surrender streams, annuitization streams, and streams reflecting blends of surrender and annuitization benefits. All such streams would also be adjusted to reflect death benefits and to discount all benefits for survivorship (based on the mortality table prescribed in the SVL).

5. Valuation Interest Rates

For annuities offering more than one type of benefit, the SVL is not explicit as to how valuation interest rates should be determined. The SVL is also not explicit as to how valuation interest rates should be determined for certain types of benefits offered under annuity contracts, such as death and nursing home benefits.

Purpose

The purpose of this Actuarial Guideline is to codify the basic interpretation of CARVM and does not constitute a change of method or basis from any previously used method, by clarifying the assumptions and methodologies which will comply with the intent of the SVL. This Actuarial Guideline shall apply to all annuity contracts subject to CARVM, where any elective benefits (as defined below) are available to the contract owner under the terms of the contract. However, life or health insurance riders attached to an annuity contract, where all components of the rider (e.g., premiums, benefits, contract charges, accumulation values and other components) are separate and distinct from the components of the annuity contract, should be treated as a separate life or health insurance contract not subject to this Actuarial Guideline. While this Actuarial Guideline applies to all annuity contracts subject to CARVM, in the event an actuarial guideline or regulation dealing with reserves is developed for a specific annuity product design, the product specific actuarial guideline or regulation will take precedence over the Actuarial Guideline.

Definitions

1. Elective and Non-Elective Benefits in CARVM

For purposes of determining reserves under CARVM, each benefit available under the annuity contract must be placed into one of the two categories defined as follows:

Non-Elective Benefits: Benefits that are payable to contract owners or beneficiaries only after the occurrence of a contingent or scheduled event independent of a contract owner's election of an option specified in the contract, including (but not limited to) death benefits, accidental death benefits, disability benefits, nursing home benefits, and benefits payable under either a deferred or immediate annuity contract (with or without life contingencies), where no benefit options are available under the terms of the contract.

Elective Benefits: Benefits that do not fall under the non-elective benefits category (i.e., benefit options that may be freely elected under the terms of the contract). Elective benefits include (but are not limited to) full surrenders, partial withdrawals, and full and partial annuitizations.

In some cases it may not be clear whether some benefits are elective or non-elective. The presence of certain types of non-elective benefits may affect other non-elective benefits and/or elective benefits. The Valuation Actuary should use judgment in making these determinations by considering factors such as the degree to which contract owner actions would be influenced by the availability of each benefit in the contract.

2. Elective and Non-Elective Incidence Rates in CARVM

For non-elective benefits, incidence rates from tables prescribed by the SVL should be applied to determine the payment of non-elective benefits and to discount, for survivorship, all benefit payments included in an Integrated Benefit Stream, as defined below. If no incidence tables are prescribed by the SVL, then company or industry experience (with margins for conservatism) may be used, as appropriate. Annuity mortality tables prescribed by the SVL should be used to determine all mortality based benefits under the contract (including, but not limited to, annuitizations and death benefits) and to discount other types of benefit payments for survivorship.

Actuarial judgment should be used as to the appropriateness of applying any non-elective incidence rates other than mortality. For non-elective waiver-of-surrender-charge benefits other than mortality-based benefits and for similar non-elective benefits, incidence rates greater than zero are not to be applied at any time in the projection after the earlier of: (a) the end of the surrender charge period

applicable immediately after the first premium is paid; and (b) when the projected cash value has been depleted.

For elective benefits, incidence rates should not be based on tables reflecting past company experience, industry experience or other expectations. Instead, every potential guaranteed elective benefit stream required to be reserved by CARVM must be considered in the determination of integrated benefit streams as defined below. This is accomplished by considering trial sets of guaranteed elective benefit incidence rates, either through numerical testing or analytical means, to determine which trial set produces the “greatest present value” as described in Text paragraph 1 below. Theoretically, this means that all possible elective benefit incidence rates between 0% and 100% should be considered. However, in practice, such a greatest present value will typically occur by assuming an incidence rate of either 0% or 100%.

3. Integrated Benefit Stream

An integrated benefit stream is one potential blend of guaranteed elective and non-elective benefits available under the contract, determined as the combination of A and B, where:

A equals one potential stream of one or more types of guaranteed elective benefits available under the terms of the contract, based upon a chosen set of elective benefit incidence rates; and

B equals the stream of all guaranteed non-elective benefits provided under the terms of the contract, recognizing the guaranteed elective benefit stream under consideration in A above, and the non-elective incidence rates defined in 2. above.

Both A and B above should be discounted for survivorship, based on the non-elective incidence rates defined in 2. above.

Text

1. Greatest Present Value

All guaranteed benefits potentially available under the terms of the contract must be considered in the valuation process and analysis and the ultimate policy reserve held must be sufficient to fund the greatest present value of all potential integrated benefit streams, reflecting all guaranteed elective and non-elective benefits available to the contract owner. Each integrated benefit stream available under the contract must be individually valued and the ultimate reserve established must be the greatest of the present values of these values, based on valuation interest rate(s) as defined in Section 3 below.

2. Examples of Integrated Benefit Streams That Must Be Considered

A. Cash Value Streams

One mandatory set of integrated benefit streams for a deferred annuity with cash settlement values which must always be considered is any possible blend of future guaranteed partial withdrawals and full surrenders available under the contract, as specified in the SVL, accumulated at the guaranteed credited interest rate(s) and discounted at the valuation rate(s) of interest defined in section 3 below, with appropriate recognition of all guaranteed non-elective benefits available under the contract.

B. Annuitization Streams

A second mandatory set of integrated benefit streams that must be considered is any possible blend of future guaranteed full or partial annuitization elections, as specified in the SVL, available to the contract owner at each election date required by CARVM, with appropriate recognition of all guaranteed non-elective benefits available under the terms of the contract. In determining the integrated benefit streams to value the annuitization option, the guaranteed purchase rates contained in the contract, as well as any other contract provisions, excluding any current purchase rates which may be applicable, are applied to the accumulation fund.

C. Other Elective Benefit Streams

In addition to the cash value and annuitization streams described above, all other possible guaranteed elective benefits available under the contract, including blends of more than one type of guaranteed elective benefit, must be considered in a manner consistent with the mandatory cash value and annuitization streams, with appropriate recognition of all guaranteed non-elective benefits available under the contract.

3. Determination of Valuation Interest Rates

Section 4b of the SVL determines valuation rates for an annuity contract based on the following Parameters:

- A. The basis of valuation (issue year or change in fund);
- B. Whether or not the annuity provides for cash settlement options;
- C. Whether interest is guaranteed on premiums received more than 12 months following issue (or the valuation date for change in fund basis);
- D. The guarantee duration; and
- E. The Plan Type.

Parameters A, B and C above should be determined at a contract level. Additional requirements regarding the change in fund basis of valuation are set forth in Section 5 below. Parameters D and E should be determined at a benefit level, as set forth in Section 4 below.

Under a contract level determination, parameters are set based on the characteristics of the contract as a whole. Under a benefit level determination, parameters are set based on the characteristics of each benefit, resulting in potentially different valuation rates for each benefit type comprising the integrated benefit stream.

4. Determination of Guarantee Duration and Plan Type

Guarantee duration and Plan Type are based upon the specific characteristics of each individual benefit type that comprise the integrated benefit stream, as follows:

- A. For portions of the integrated benefit stream attributable to full surrender and partial withdrawal benefits, the Plan Type should be based upon the withdrawal characteristics of the benefit, as stated in the contract. This may result in a Plan Type A, B or C under the 1980 amendments of the SVL. The guarantee duration is the number of years for which interest rates are guaranteed in

excess of the calendar year statutory valuation interest rate for life insurance policies with guarantee duration in excess of twenty (20) years.

- B. For portions of the integrated benefit stream attributable to full and partial annuitization benefits, the determination of the valuation interest rate involves the use of the appropriate Plan Type and weighting factor as determined by the SVL, with the guarantee duration as the number of years from the original date of issue or date of purchase, to the date the annuitization is assumed to commence. If the underlying assumption is that the contract owner may withdraw funds only as an immediate life annuity or as installments over 5 years or more, this will generally result in a Plan Type A, under the 1980 amendments of the SVL, with the valuation interest rate changing as different assumed annuitization dates determine guarantee durations which will fall into different guarantee duration bands under the SVL. An assumed annuitization option which has a non-life contingent payout period of less than five (5) years shall be considered a Plan Type C, with the valuation interest rate changing as different assumed annuitization dates determine guarantee durations which will fall into different guarantee duration bands under the SVL.
- C. For portions of the integrated benefit stream attributable to non-elective benefits, since the underlying assumption is that no withdrawal is permitted, Plan Type A should generally be used, with a guarantee duration determined as the number of years from issue or purchase to the date non-elective benefits may first be paid. In most cases, the guarantee duration should be less than five years, since non-elective benefit coverage usually begins immediately after issue, with benefits payable commencing in the first contract year.

For benefit types incorporating multiple payments, paragraphs 4(A), 4(B), and 4(C) above should be applied to each separate payment according to the withdrawal, annuitization, or non-elective benefit characteristics of the contract and payment provisions at the time each payment is to be made. If a portion of the integrated benefit stream is part of an immediate life annuity or a series of installments over five (5) years or more, but can be changed directly or indirectly by exercise of contract owner withdrawal options, then it would be inappropriate to apply paragraph 4(B) to that portion of the integrated benefit stream, since the contractholder may withdraw funds other than as a life annuity or in installments of five (5) years or more.

For example, a Guaranteed Lifetime Income Benefit (GLIB) is a guarantee to the owner of a fixed deferred annuity contract, whether traditional or indexed to an external referent such as an equity index, that the owner can have a defined income for life in an amount determined by formula, while the owner retains traditional rights (such as withdrawal) to the other values provided by the underlying deferred annuity and while such values continue to exist. Income benefits are typically deducted from one or more of the annuity's defined values to the extent such values remain positive. Once the GLIB is elected, the contract owner may have rights to stop and restart the income benefit and may also request full or partial surrender of any remaining annuity value, though doing so may negatively impact or eliminate subsequent guaranteed income benefits. Thus, applying 4(A) and 4(B) above, the GLIB benefit stream is seen to be composed of two portions to determine the Plan Type and guarantee duration, as follows:

The first portion consists of the series of defined payments to the extent that the payments, or any fraction thereof, are withdrawals that reduce or deplete the annuity's defined values. Applying paragraph 4(A) to this portion would result in Plan Type A, Plan Type B, or Plan Type C, by following the definitions of such contained within the Standard Valuation Law and reflecting the specific contract provisions, especially with regard to withdrawal. Paragraph 4(A) would also apply to any residual withdrawals that can be made following election of the GLIB benefit.

The second portion is a life annuity without option to take or receive additional amounts under the contract, and consists of the payments not included in the above portion. Applying paragraph 4(B), Plan Type A would generally apply to this segment with the guarantee duration determined using the period from contract issue to commencement of payments in this second portion.

5. Change in Fund Basis

As indicated by section 4b.C.(1)(c)(vi) of the SVL, a company may elect to value annuity contracts with cash settlement options on either an issue year basis or on a change in fund basis. Annuity contracts with no cash settlement options must be valued on an issue year basis. The issue year basis or change in fund basis should be determined for the contract as a whole, and thus must be consistently applied to all portions of all integrated benefit streams available under the annuity contract. The election of issue year or change in fund basis must be made at the issuance of the contract and must not change during the term of the contract without the prior written approval of the commissioner.

6. Purchase Rates

Contracts may provide, as contractual guarantees, the use of preferential purchase rates to those listed in the contract. As an example, a contract may provide that the company will offer, at the time of annuitization, the rates offered to new purchasers of immediate annuities if such rates will provide a higher annuity benefit than would result from the contractually guaranteed rates provided in the contract. This creates a contract guarantee which must be valued under CARVM. Ignoring this benefit in determining reserves will produce reserves less than the statutory formula reserves required under CARVM. Valuation of this benefit, however, is complicated by the fact that the company does not currently know what the exact rate will be at the time of the settlement election. In order to determine conservative statutory formula reserves, if use of future unknown rates are guaranteed, the company shall establish reserves not less than the contract's accumulation fund value, on the valuation date, reduced by an "expense allowance" not to exceed 7% of such fund. This section does not require the calculation of a reserve for the annuitization of business based upon current purchase rates pursuant to the "annuitization streams" described in Paragraph 2.B. above.

Likewise for contracts which provide for additional amounts during the payout period over those guaranteed at the commencement of the annuity payments, the reserve during the deferred period shall not be less than the contract's accumulation fund reduced by an expense allowance not to exceed 7% of such fund.

7. Practical Considerations

The major purpose of this Actuarial Guideline is to provide clarification and consistency in applying CARVM to annuities with multiple benefit streams. However, in practice there may be other acceptable methods of applying CARVM which are substantially consistent with the methods described in this Actuarial Guideline. Such methods may also be used, with prior regulatory approval.

Additionally, in applying this Actuarial Guideline there may theoretically be an infinite number of contract owner options that are possible under the contract. However, it may not be practical, possible or even appropriate to test every conceivable combination of potential integrated benefit streams theoretically available under the contract. This Actuarial Guideline requires that the actuary consider, not necessarily test, all potential integrated benefit streams to determine to what extent each contract owner option has a material impact on the reserve. In practice, the actuary may be able to eliminate some potential integrated benefit streams by analytical methods. The actuary may also be able to demonstrate the reserve adequacy of certain approximations. For example, in certain situations it may

be shown that a CARVM reserve ignoring non-elective benefits, plus an “add-on” reserve for non-elective benefits, is a reasonable approximation for the theoretically correct CARVM reserve.

Effective Date

This guideline shall be effective on December 31, 1998, affecting all contracts issued on or after January 1, 1981. A company may request a grade-in period for contracts issued prior to December 31, 1998 from the domiciliary commissioner upon satisfactory demonstration that the method and level of current reserves held for such contracts are adequate in the aggregate. This phase-in will require establishment of no less than 33 1/3% of the additional reserves resulting from the application of this guideline on December 31, 1998, no less than 66 2/3% on December 31, 1999, and 100% by December 31, 2000.

Actuarial Guideline XXXIV

VARIABLE ANNUITY MINIMUM GUARANTEED DEATH BENEFIT RESERVES

Actuarial Guideline XXXIV was repealed December 30, 2009, and was replaced by *Actuarial Guideline XVIII—CARVM for Variable Annuities*, effective December 31, 2009.

Not for Distribution

Actuarial Guideline XXXV

THE APPLICATION OF THE COMMISSIONERS ANNUITY RESERVE METHOD TO EQUITY INDEXED ANNUITIES

Background

The purpose of this Actuarial Guideline is to interpret the standards for the valuation of reserves for equity indexed annuities. This Guideline codifies the interpretation of the Commissioners Annuity Reserve Valuation Method (CARVM) by clarifying the computational methodologies which will comply with the intent of the Standard Valuation Law (SVL).

Equity indexed deferred annuity products provide policyholders with a minimum guaranteed interest accumulation rate on a portion of all premium payments and a portion of the growth, if any, of an equity based index such as the S&P 500. While there is no “typical” equity indexed product, there are design features that are common to most products. Some of these features are a participation rate guaranteed for one or more years, a cap on the portion of the index growth that is credited to policyholders, and a policy term which defines a time period for which current guarantees are applicable.

Equity indexed immediate annuity products provide policyholders with a minimum guaranteed annuitization rate and an opportunity to receive larger periodic payments based on the growth, if any, in an equity index. The product design may include features such as a participation rate, cap or term.

While contract parameters such as participation rate and cap are guaranteed for a period of time, growth of the underlying index is not. Index growth may be positive or negative. This combination of guaranteed parameters and unknown equity index growth makes the application of CARVM to these products problematic.

CARVM defines minimum statutory reserves as “the greatest of the respective excesses of the present value, at the date of valuation, of the future guaranteed benefits, including guaranteed nonforfeiture benefits, ... over the present value, at the date of valuation, of any future valuation considerations derived from future gross considerations, required by the terms of such contract, that become payable prior to the end of such respective contract year. The future guaranteed benefits shall be determined by using the mortality table, if any, and the interest rate, or rates, specified in such contracts for determining guaranteed benefits.”

In order that all insurers issuing equity indexed annuity products establish reserves for statutory reporting purposes that are consistent with CARVM minimum statutory formula reserves requirements, this actuarial guideline identifies a computational method that is deemed to be consistent with CARVM in situations when specific operational criteria called “Hedged as Required” criteria are met. In addition, two computational methods are defined that are deemed to be consistent with CARVM in the event the “Hedged as Required” criteria are not met.

Two forms of the “Hedged as Required” criteria are provided. The “basic” criteria are applicable when an insurer uses long dated options to hedge the equity risk embedded in an equity indexed annuity. The second set of criteria is applicable when an insurer uses an option replication strategy.

Scope

This Actuarial Guideline applies to all equity indexed annuity contracts, regardless of the date of issue, that are subject to CARVM.

Computational Methods

Computational methods deemed to be consistent with CARVM can be classified into two groups, Type 1 methods and Type 2 methods. The following computational method is considered a Type 1 method: the Enhanced Discounted Intrinsic Method (EDIM). Type 1 computational methods are deemed to be consistent with CARVM if the applicable “Hedged as Required” are met. The following methods are considered Type 2 methods: the Commissioners Annuity Reserve Method with Updated Market Values (CARVM with UMV) and the Market Value Reserve Method (MVRM). Also, an adaptation of the MVRM, known as the Black-Scholes Projection Method (BSPM), is recognized. For a complete description of these methods, please consult Attachment 1.

General Requirements on the Use of Certain Computational Methods

The MVRM and EDIM computational methods are both based on a future value. In the case of MVRM, a projected index is determined. The projected index is then used to determine end of term and interim benefit amounts. CARVM is applied to these benefit amounts. In the case of EDIM, the end of term guaranteed value (a future value) is used to determine an interest rate for calculating terminal reserves for the guaranteed benefits after the initial terminal reserve. Determination of the “term” is an essential component of both computational methods.

The EDIM, MVRM and the BSPM adaptation of the MVRM computational methods are considered acceptable interpretations of CARVM under the following conditions:

1. The policy form design features a single dominant benefit which is the most likely benefit to be provided under the policy form with the determination of the single dominant benefit based on a consideration of product features such as the pattern of guaranteed participation rates, surrender charges, vesting rates, spread deductions, and marketing/advertising material.
2. The point in time associated with the single dominant benefit most likely to be provided under the contract is used as the terminal point of the current term for purposes of applying the computational method and complying with the “Hedged as Required” criteria, if applicable.
3. The appointed actuary has demonstrated to the satisfaction of the regulatory officials in each state in which the insurer is required to submit a statutory financial statement, prior to the use of the MVRM or EDIM computational methods, that the requirements above have been met.

Variations from the MVRM and EDIM as described in Attachment 1, are not acceptable interpretations of CARVM. The BSPM is considered an acceptable adaptation of the MVRM.

Type 1 Methods

A Type 1 computational method is deemed to be consistent with CARVM if an insurer using the method complies with the applicable “Hedged as Required” criteria (Attachment 2) and provides a certification as to compliance with the criteria. The certification must be signed by the appointed actuary. The certification shall be provided with each annual and quarterly statutory financial statement filed with the appropriate insurance regulatory official in each state in which the insurer does business.

For purposes of determining compliance with the “equivalence of characteristics” requirement in the “Hedged as Required” criteria, the current term of an equity indexed deferred annuity policy will be determined based on the requirements in the section captioned “General Requirements on Use of Certain Computational Methods.” For purposes of applying a Type 1 computational method, the time horizon for

present value calculations should be based on the current term of the policy based on the requirements in the section captioned “General Requirements on Use of Certain Computational Methods.”

The Enhanced Discounted Intrinsic Method (EDIM) requires an initial reserve amount that is determined by methods that are not specifically included in the EDIM. For purposes of compliance with statutory minimum formula reserve requirements, the initial reserve under EDIM must be set at least equal to the initial reserve produced by either CARVM with UMV, or the MVRM with assumptions used to compute any necessary option market values reasonable as of the date of issue of the policy. The insurer must provide a certification (Attachment 3) as to the reasonableness of the assumptions.

Type 2 Methods

The use of Type 2 method is not conditioned upon the requirement to meet the “Hedged as Required” criteria. However, an insurer using a Type 2 method must provide a certification (Attachment 4) signed by the appointed actuary with each annual and quarterly statutory financial statement filed with the appropriate insurance regulatory official in each state in which the insurer does business. This certification deals with the assumptions underlying the option market values included in the calculation of reserves using a Type 2 method and the consistency in assumptions between these option market values and the statement value of any options owned by the insurer to support the equity indexed annuity business being valued.

For purposes of applying the MVRM and the BSPM recognized adaptation computational methods, the time horizon for present value calculations should be based on the requirements in the section captioned “General Requirements on Use of Certain Computational Methods.”

Required Change in Method

In the event an insurer that is using a Type 1 computational method for a block of business fails to meet the applicable “Hedged as Required” criteria, the required actuarial certification must disclose this fact. If the reason for failing the “Hedged as Required” criteria is not corrected within one quarterly financial reporting of the initial disclosure of the failure in the actuarial certification, the insurer must use a Type 2 computational method for determining minimum statutory formula reserves for this block of business.

If at a later date, the insurer can demonstrate to the satisfaction of its domiciliary commissioner that it is meeting the applicable “Hedged as Required” criteria, the insurer may, with the approval of the domiciliary commissioner, resume using a Type 1 computational method. In addition, the insurer must notify the appropriate regulatory official in each state in which the insurer does business subject to the change in computational method.

Optional Change in Method

An insurer using either a Type 1 or Type 2 computational method for a block of business, may with the approval of its domiciliary commissioner and after notifying the appropriate regulatory official in all the other states in which the insurer writes this block of business, use a computational method of the other type. If the change in computational methods involves a change from a Type 2 computational method to a Type 1 computational method, the request to the domiciliary commissioner for approval of the change in method must be accompanied with a demonstration of compliance with the applicable “Hedged as Required” criteria.

Plan Type

The use of either a Type 1 computational method or a Type 2 computational method requires a determination of Plan Type for purposes of determining the maximum valuation interest rate. Design features unique to equity indexed annuities, such as an equity enhanced surrender values, vesting schedules, or participation rate, should not be used to determine the Plan Type of a policy form. Only those design features specifically identified in Section 4b, Paragraph C of the NAIC Model SVL may be used to assign a Plan Type to a policy form.

The definition of Plan Type A and Plan Type B in the NAIC Model SVL includes the phrase “with an adjustment to reflect changes in interest rates or asset values since receipt of the funds by the insurance company...” The reference to “change in ... asset values” does not include changes in policy values due to changes in the equity index underlying the policy form.

Other Regulatory Requirements

The guidance provided in this Actuarial Guideline concerning statutory minimum formula reserves for equity indexed annuity products supersedes the valuation guidance in Sections 5 and 6 of the NAIC Interest-Indexed Annuity Contracts Model Regulation.

Asset Adequacy Testing of Reserves

To the extent required by law, regulation, or regulatory requirements, reserves established for equity indexed annuity policies must be tested for adequacy using appropriate methods and assumptions.

Not for Distribution

ATTACHMENT 1
Description of Computational Methods

CARVM-UMV

Step 1: For each duration and each benefit at which an index-based benefit is available, determine the market value of the appropriate call option. The appropriate call option is one that exactly hedges the floor of the benefit at that point in time. This means that the payoff of the call option should exactly equal the difference between the specific benefit available at that point in time (reflecting all relevant contract features) and the guaranteed floor of that benefit. The market value should be determined using an appropriate option pricing technique, such as Black-Scholes or a stochastic scenario method.

Step 2: The market value of all of the call options are projected forward at the appropriate valuation interest rate to the point in time at which the call option would expire. The valuation interest rate should be consistent with the requirements of any applicable Actuarial Guidelines or regulations, such as Actuarial Guideline XXXIII or Actuarial Guideline IX-B.

Step 3: The future guaranteed benefits for each benefit at each time point are determined by adding the guaranteed floors of the benefit to the amounts determined in Step 2.

Step 4: Now a CARVM calculation can be performed. The CARVM calculation should be in accordance with Actuarial Guideline XXXIII and any other applicable regulations or Actuarial Guidelines.

MVRM

Step 1: Calculate the projected index value at the end of the “term” which would produce a benefit at the end of the “term” equal to the sum of (1) the contract guarantee at that time, and (2) the current market value of the call option(s) which would fully hedge the index-based benefit, accumulated at the appropriate valuation interest rate. This calculation should be performed assuming equal annual percentage increases in the index. The call options used are those with maturity dates coterminous with the setting of participation rates, spread, or any other method of determining index-based benefits. The valuation interest rate used to accumulate the call options should be consistent with the requirements of any applicable Actuarial Guidelines or regulations, such as Actuarial Guideline XXXIII or Actuarial Guideline IX-B. Note that the “term” referred to above should be consistent with the “term” described in this Actuarial Guideline.

Step 2: From the current level of the index and the projected level of the index at the end of the term, calculate an implied compound constant growth rate of the index from the valuation date to the end of the term. Use this implied growth rate to project the level of the index at intermediate anniversaries.

Step 3: All annuity benefits can now be determined from the index levels.

Step 4: Now a CARVM calculation can be performed. The CARVM calculation should be in accordance with Actuarial Guideline XXXIII and any other applicable regulations or Actuarial Guidelines.

MVRM Using Black-Scholes Projection Method

This is an adaptation of the basic MVRM approach to accommodate products for which the participation rate, spread, or any other benefit determination method is redetermined during the term (particularly annually).

Step 1: Calculate the cost of a full hedging call option as a percentage of the account value for the period that the benefit determination is guaranteed, accumulate the percentage to the end of that period at the risk-free interest rate, and use the accumulated percentage cost as the projected growth rate of the account value during the period. Perform the same type of calculation for each successive period within the term,

giving recognition to the benefit guarantees, forward interest rates, forward index volatility, and index dividend levels.

Step 2: Determine the index level which would provide the projected account level on each anniversary on the basis of the participation rate, spread, or other benefit determination method used.

Step 3: All annuity benefits can now be determined from the index levels.

Step 4: Now a CARVM calculation can be performed. The CARVM calculation should be in accordance with Actuarial Guideline XXXIII and any other applicable regulations or Actuarial Guidelines.

EDIM

Step 1: The Fixed Component at issue is the formula reserve produced by either CARVM-UMV or MVRM. The Fixed Component at the end of the term is the floor of the benefit actually being hedged.

Step 2: The intermediate values of the Fixed Component are found by solving for an interest rate that would accumulate the initial value to the ending value. For example, assume you purchase options assuming that 90% of policyholders will surrender at maturity, and that 10% of policyholders will annuitize at maturity. The Fixed Component is the sum of (1) 90% of the Fixed Component that grows to the floor of the surrender benefit; and (2) 10% of the Fixed Component that grows to the floor of the annuitization benefit.

Step 3: The Equity Component is equal to the discounted intrinsic value of the options. The discounted intrinsic value of the options is found by taking the intrinsic value at the valuation date, and discounting at the valuation rate for the number of years from the valuation date to the end of the term. The valuation interest rate used to discount the intrinsic value of the call options should be consistent with the requirements of any applicable Actuarial Guidelines or regulations, such as Actuarial Guideline XXXIII or Actuarial Guideline IX-B.

Step 4: The reserve is the sum of a Fixed Component and an Equity Component.

Not for Distribution

ATTACHMENT 2
Hedged as Required Criteria

In order to use a Type 1 computational method, the appointed actuary needs to certify quarterly that it meets either the “Basic” or “Option Replication” criteria.

Basic

1. Required equivalence of characteristics between the option contracts held and the options imbedded in the products with respect to specific contract features such as: Index, averaging features, option type, strike price, term, etc.
2. The amount of hedge purchased, at or near the contract issuance, must be greater than or equal to a Specified Percentage of the product’s account value, at contract issuance. The Specified Percentage varies by the length of the option guarantee (some annual ratchet products may have a term of several years, but the participation rates are only guaranteed for one year, so the “term” for this purpose is 1 year), and allows the company to assume no more than 3% per year of elective benefit decrements, unless the Commissioner agrees to a higher limit. For example, for a five-year point-to-point product, the Specified Percentage would be: $SP\% = (1 - .03)^5 = 86\%$.
3. The Company must have a specific plan for hedging risks associated with interim death benefits, early surrenders, etc.
4. The Company must have a system in place that is used to monitor the effectiveness of the company’s hedging strategy.
5. The Company must have a stated maximum tolerance for differences between the expected performance of the hedge and the actual results of the hedge.

Option Replication

1. Required equivalence of characteristics between the target of an option replication strategy employed, and the options imbedded in the liabilities with respect to specific contract features such as: index, averaging features, option type, strike price, term, etc.
2. At the end of each quarter, the notional amount of the target of the option replication strategy must be greater than or equal to the sum of the Specified Percentages of each contract's account value. The Specified Percentage varies by the length of the remaining option guarantee (some annual ratchet products may have a term of several years, but the participation rates are only guaranteed for one year, so the “term” for this purpose is 1 year), and allows the company to assume no more than 3% per year of elective benefit decrements, unless the Commissioner agrees to a higher limit. For example, if a point-to-point contract has five years remaining, the Specified Percentage for that contract would be: $SP\% = (1 - .03)^5 = 86\%$. Appropriate assumptions for non-elective decrements such as mortality may be added to the assumption for elective decrements.
3. The company must have a specific plan for hedging risks associated with interim death benefits, early surrenders, etc.
4. The Company must have system in place that is used to monitor the effectiveness of the company’s hedging strategy.
5. The Company must have a stated maximum tolerance for differences between the expected performance of the hedge and the actual results of the hedge. The maximum tolerance test and compliance evaluation test must meet the following minimum requirements. The compliance evaluation criteria will be a retrospective correlation test performed at least on a weekly basis.

The Company will compare the change in the market value, from the beginning of the calendar quarter, of the hedge portfolio with the change in the market value of the options embedded in the liability portfolio. The maximum dollar amount of difference permitted between these two changes is 10% of the beginning of period market value of the options embedded in the liabilities. If the difference exceeds this limit, the following steps must be taken:

- If for a second time during a quarter the dollar amount of difference exceeds 10% of the beginning of period market value of the options embedded in the liabilities, but is less than 25% of the beginning of period market value of the options embedded in the liabilities, the Company must notify the Commissioner of Insurance in each state in which the insurer is licensed. The notification must indicate the dollar amount of reserves being hedged by the option replication strategy.
- If at any of the weekly intervals, the difference between the two changes exceeds 25% of the beginning of period market value of the options embedded in the liabilities, the Company must notify the Commissioner of Insurance in each state in which the insurer is licensed. The notification must indicate the dollar amount of reserves being hedged by the option replication strategy and the impact on surplus of reporting the reserves based on the CARVM-UMV.
- If at any point in time during the quarter the difference between the two changes exceeds 35% of the beginning of period market value of options embedded in the liabilities, the insurer is deemed to be out of compliance with the "Hedged as Required" criteria, and the Company must notify the Commissioner of Insurance in each state in which the insurer is licensed. The notification must indicate the dollar amount of reserves being hedged by the option replication strategy and the impact on surplus of reporting the reserves based on the CARVM-UMV.

Drafting Note: The requirements discussed above deal with the situation in which the actual hedge underperforms relative to the expected hedge performance. The ability of an insurer to over-hedge may be constrained by other components of a state's regulatory framework including the state's investment article and regulations concerning the use of derivative instruments. For purposes of this Drafting Note, over-hedged means that at a particular point in time, the hedge portfolio exceeds the portfolio of liabilities being hedged. If over-hedged, the excess hedging instruments are excluded from the measurements required in Item 5 of the Hedged as Required Criteria.

ATTACHMENT 3
Reasonableness of Assumptions Certification

The following certification must be filed in conjunction with each quarterly and annual statutory financial statement filed with the appropriate regulatory official in each state in which the insurer does business. The certification must be signed by the appointed actuary.

I, (state name and professional designation), am the appointed actuary for (company name). I have reviewed the assumptions underlying the values assigned to all equity options used in the determination of the initial statutory reserves under the Enhanced Discounted Intrinsic Method for all equity indexed deferred annuity products issued or reinsured by (company name) and reported in the statutory financial statement as of (the date of valuation). The assumptions used to determine such option market values are reasonable in light of the relevant economic conditions prevalent at the time of issue of each policy valued using the Enhanced Discounted Intrinsic Method.

(Name of actuary)

(Signature of actuary)

(Date of certification)

Not for Distribution

ATTACHMENT 4
Reasonableness and Consistency of Assumptions Certification

The following certification must be filed in conjunction with each quarterly and annual statutory financial statement filed with the appropriate regulatory official in each state in which the insurer does business. The certification must be signed by the appointed actuary.

I, (state name and professional designation), am the appointed actuary for (company name). I have reviewed the assumptions underlying the values assigned to all equity options used in the determination of statutory reserves for all equity indexed annuity products issued or reinsured by (company name) insurance company and reported in the statutory financial statement as of (the date of valuation). The assumptions used to determine such option market values are:

1. reasonable in light of current relevant economic conditions as of the date of valuation, and
2. are consistent with the comparable assumptions used to determine the statement value of any derivative instruments used to hedge the equity indexed based obligations embedded in the equity indexed annuities subject to this certification.

(Name of actuary)

Actuarial Guideline XXXVI

THE APPLICATION OF THE COMMISSIONERS RESERVE VALUATION METHOD TO EQUITY INDEXED LIFE INSURANCE POLICIES

Background

The purpose of this Actuarial Guideline is to clarify statutory and regulatory requirements for the valuation of reserves for equity indexed universal life insurance policies. This Guideline codifies the interpretation of the Commissioners Reserve Valuation Method (CRVM) by clarifying the computational methodologies that are deemed to comply with the intent of the Standard Valuation Law (SVL) and the Universal Life Insurance Model Regulation. These methodologies will be deemed to be consistent with CRVM.

Equity indexed universal life insurance policies include interest credits that are a combination of a guaranteed interest rate and an interest rate based on a percentage of the increase in an equity index, such as the S&P 500. Currently, there are only a few products in the market and the product designs have been straightforward. As new product designs emerge, this Actuarial Guideline may have to be revised.

In order that all insurers issuing equity indexed universal life insurance policies establish reserves for statutory reporting purposes that are consistent with CRVM minimum statutory formula reserves, this Actuarial Guideline identifies a computational method deemed to be consistent when specific operational criteria called “Hedged as Required” criteria are met. In addition, two other computational methods are defined that are deemed to be consistent with CRVM in the event the “Hedged as Required” criteria are not met.

Scope

This Actuarial Guideline applies to all equity indexed universal life insurance policies, regardless of the date of issue, that are subject to CRVM and would otherwise be subject to the reserve requirements under the Universal Life Insurance Model Regulation.

Definitions

Appointed Actuary. The appointed actuary, for purposes of this guideline, is the actuary appointed by the company’s board of directors to provide opinions in accordance with Standard Valuation Law and the model Actuarial Opinion and Memorandum regulation.

Credited. Index-based benefits will be considered to be credited when they are added to the fund and treated in the same manner as other interest credits to the fund.

Term. An index-based benefit crediting period.

Computational Methods

Computational methods deemed to be consistent with CRVM can be classified into three groups, Type 1 methods, Type 2a methods and Type 2 methods. The following computational method is considered a Type 1 method: the Implied Guarantee Rate Method (IGRM). Type 1 computational methods are deemed to be consistent with CRVM only if the “Hedged as Required” criteria are met. The following is considered a Type 2a method: the Commissioners Reserve Valuation Method with Updated Average Market Value (CRVM with UAMV). The following is considered a Type 2 method: the Commissioners Reserve Valuation Method with Updated Market Value (CRVM with UMV). For a complete description of these methods, consult Attachment 1.

The minimum reserve for equity indexed life insurance policies is the statutory reserve calculated under the Universal Life Insurance Model Regulation for an identical policy with no guaranteed index-based benefits. If the reserve produced by Type 1, Type 2a or Type 2, as appropriate, is greater than the minimum reserve, then that Type 1, Type 2a or Type 2 reserve is the minimum reserve.

Type 1 Methods

A Type 1 computational method is deemed to be consistent with CRVM if an insurer using the method complies with the “Hedged as Required” Criteria (Attachment 2) and provides a certification (Attachment 3) as to compliance with the criteria. The appointed actuary must sign the certification. The certification shall be provided with each annual and quarterly statutory financial statement filed with the appropriate insurance regulatory official in each state in which the insurer writes or reinsures equity indexed universal life insurance business.

For purposes of determining compliance with the “equivalence of characteristics” requirement in the “Hedged as Required” criteria, the current term of an equity indexed universal life insurance policy is one year or less. This should be interpreted consistently when a separate index-based benefit guarantee is made on each premium received.

The IGRM computational method is deemed to be consistent with CRVM under the following conditions:

1. The implied guaranteed rate for terms after the first, determined at issue using the method of Attachment 1, paragraph 3 of the IGRM method, is less than or equal to the appropriate maximum valuation interest rate.
2. Index-based benefit terms cannot be greater than one year. This should be interpreted consistently when a separate index- based benefit guarantee is made on each premium received.
3. The appointed actuary has demonstrated at time of filing or in conjunction with a change to a Type 1 Method, to the satisfaction of the regulatory officials in each state in which the insurer writes or reinsures equity indexed universal life insurance business, prior to the use of the IGRM that the requirements in (1) and (2) above have been met.

Type 2a Methods

A Type 2a computational method is deemed to be consistent with CRVM if an insurer using the method complies with Type 2a Prerequisite Criteria below, and provides Reasonableness and Consistency of Assumptions Certification (Attachment 4). The appointed actuary must sign the certification. The certification shall be provided with each annual and quarterly statutory financial statement filed with the appropriate insurance regulatory official in each state in which the insurer writes or reinsures equity indexed universal life insurance business.

Type 2a Prerequisite Criteria are as follows:

1. At issue, the policy satisfies (a) or (b) as follows:
 - (a) The implied guaranteed rate for terms after the first, determined at issue using the method of Attachment 1, paragraph 3 of the CRVM with UAMV method, is less than or equal to the appropriate maximum valuation interest rate; or
 - (b) Policies with identical renewal guarantees issued in three of the past five years would have satisfied condition 1 for the Type 1 method.
2. Index-based benefit terms cannot be greater than one year. This should be interpreted consistently when a separate index- based benefit guarantee is made on each premium received.

3. The appointed actuary has demonstrated at time of filing or in conjunction with a change to a Type 2a Method, to the satisfaction of the regulatory officials in each state in which the insurer writes or reinsures equity indexed universal life insurance business, prior to the use of the CRVM with UAMV that the requirements in (1) and (2) above have been met.

Type 2 Methods

The use of a Type 2 method is not conditioned upon the requirement to meet the “Hedged as Required” criteria or the Type 2a Prerequisite Criteria. However, an insurer using a Type 2 method must provide a certification (Attachment 5) signed by the appointed actuary with each annual and quarterly statutory financial statement filed with the appropriate insurance regulatory official in each state in which the insurer writes or reinsures equity indexed universal life insurance business. This certification deals with the assumptions underlying the option market values included in the calculation of reserves using a Type 2 method and the consistency in assumptions between these option market values and the statement value of any options owned by the insurer to support the equity indexed universal life insurance business being valued.

Required Change in Method

In the event an insurer that is using a Type 1 computational method for a block of business fails to meet the applicable “Hedged as Required” criteria, the required actuarial certification must disclose this fact. If the reason for failing the “Hedged as Required” criteria is not corrected within one quarterly financial reporting period of the initial disclosure of the failure in the actuarial certification, the insurer must choose to use a Type 2a or a Type 2 computational method for determining minimum statutory formula reserves for this block of business.

If, at a later date, the insurer can demonstrate to the satisfaction of its domiciliary commissioner that it is meeting the applicable “Hedged as Required” criteria, the insurer may, with the approval of the domiciliary commissioner, resume using a Type 1 computational method. In addition, the insurer must notify the appropriate regulatory official in each state in which the insurer does business subject to the change in computational method.

Optional Change in Method

An insurer using either a Type 1, Type 2a or Type 2 computational method for a block of business may, with the approval of its domiciliary commissioner and after notifying the appropriate regulatory official in all the other states in which the insurer writes this block of business, use a computational method of another type. If the change in computational methods involves a change from a Type 2 or Type 2a computational method to a Type 1 computational method the request to the domiciliary commissioner for approval of the change in method must be accompanied with a demonstration of compliance with the applicable “Hedged as Required” criteria. If the change in computational methods involves a change from a Type 2 computational method to a Type 2a or Type 1 computational method, the request to the domiciliary commissioner for approval of the change in method must be accompanied with a demonstration of compliance with the “Type 2a Prerequisite Criteria” or the requirements specified in the section captioned “Type 1 Methods.”

Asset Adequacy Testing of Reserves

To the extent required by law, regulation, or regulatory requirements, reserves established for equity indexed life policies must be tested for adequacy using appropriate methods and assumptions.

Attachment 1
Description of Computational Methods

Implied Guaranteed Rate Method (IGRM)

To use this computational method, companies must satisfy the “Hedged as Required” criteria, which are set out in Attachment 2. On the asset side, options will be held in accordance with the rules of the NAIC Accounting and Procedures Manual.

The following describes how the IGRM works:

1. Issue date calculations:

Calculate an implied guaranteed rate, determined at issue, for the period of the initial term equal to: (a) the guaranteed interest rate for the period of the initial term; plus (b) the accumulated option cost expressed as a percent of the policy value to which the indexed benefit is to be applied. The accumulated option cost, determined at issue, is the option cost, which will provide the index-based benefit in excess of any other interest rate guarantee for the initial term, accumulated to the end of the term at the appropriate maximum valuation rate. The option cost should be as of the issue date.

Calculate an implied guaranteed rate, determined at issue, for the terms after the first. The implied guaranteed rates for terms after the first term will be based on historical moving average option costs according to (3) below.

Using the Universal Life Insurance Model Regulation, with the guaranteed interest rates equal to the implied guaranteed rates, calculate the Guaranteed Maturity Premium, Guaranteed Maturity Fund, and net premium for the policy based on guarantees at issue.

2. Valuation date calculations:

Calculate the implied guaranteed rate for the current term based on the current term’s index-based benefit and the option cost at the start of the current term that will provide the indexed benefit, in excess of any other interest rate guarantee, for the current term. The method of calculating the current term implied guaranteed rate is the same as for calculating the rate for the initial term. The implied guaranteed rate for terms after the current is not recalculated as long as neither the interest rate guarantees nor the index-based benefit guarantee have changed. (If guarantees have improved, then the new implied guaranteed rates for future terms will be based on option costs determined at issue according to (3) below.)

Continue the calculation of the reserve according to the Universal Life Insurance Model Regulation. Use the recalculated current term implied guaranteed rate and the implied guaranteed rate for future terms, as determined according to (3) below, when computing future guaranteed benefits at the valuation date. Do not recalculate the Guaranteed Maturity Premium, Guaranteed Maturity Fund, or net premium. This section should be interpreted consistently when a separate index-based benefit guarantee is made on each premium received.

In determining reserves, the net premiums, as determined in Section 1 above, are payable over the period that benefits are projected to be available, but not beyond the end of the net premium payment period determined at issue.

3. Index-based benefit guarantees beyond the current term should be handled as follows:

Calculate an implied guaranteed rate, determined at issue, for the terms after the current term equal to: (a) the guaranteed interest rate for the period of the term; plus (b) the accumulated option cost expressed as a percent of the policy value to which the indexed benefit is to be applied. The accumulated option cost is the historical moving average cost of the option whose term begins at the beginning of the term, which will provide the index-based benefit in excess of any other interest rate guarantee for the term, accumulated for the length of the term at the appropriate maximum valuation rate.

The historical moving average cost of the option will be calculated based on the averages over the sixty months previous to the calendar year of issue of each of the following items: (a) 3% plus the annualized daily actual index volatility as the estimated implied volatility for a one year European At-The-Money option, e.g. if the average index volatility is 15%, the implied volatility for the base case option cost is 18%; (b) index dividend rate; and (c) risk free rate. The base case cost is for a one year European At-The-Money option and must be adjusted to the characteristics of the policy.

In those states that require, by regulation, that the policy valuation interest rates not exceed the “minimum guaranteed interest rate” in the policy, the “minimum guaranteed interest rate” for IGRM is the implied guaranteed rate.

Commissioners Reserve Valuation Method Updated Average Market Value (CRVM with UAMV)

To use this computational method, companies must satisfy the Type 2a Prerequisite Criteria. On the asset side, options will be held in accordance with the rules of the NAIC Accounting and Procedures Manual. Similarly, reinsurance reserve credit will be in accordance with the rules of the NAIC Accounting and Procedures Manual.

The following describes how the CRVM with UAMV works:

1. Issue date calculations:

Calculate an implied guaranteed rate, determined at issue, for the period of the initial term equal to: (a) the guaranteed interest rate for the period of the initial term; plus (b) the accumulated option cost expressed as a percent of the policy value to which the indexed benefit is to be applied. The accumulated option cost, determined at issue, is the option cost that will provide the index-based benefit in excess of any other interest rate guarantee for the initial term, accumulated to the end of the term at the appropriate maximum valuation rate. The option cost should be as of the issue date.

Calculate an implied guaranteed rate, determined at issue, for the terms after the first. The implied guaranteed rates for terms after the first term will be based on historical moving average option costs according to (3) below.

Using the Universal Life Insurance Model Regulation, with the guaranteed interest rates equal to the implied guaranteed rates, calculate the Guaranteed Maturity Premium, Guaranteed Maturity Fund, and net premium for the policy based on guarantees at issue.

2. Valuation date calculations:

When calculating the present value of future guaranteed policy benefits at the valuation date by projecting a fund equal to the greater of the Guaranteed Maturity Fund or the policy value, this fund should be projected to the end of the current term at the guaranteed interest rate and added to

the accumulated option cost for the current term. The option cost should be determined as of the valuation date.

The option should provide for the index-based benefit in excess of any other interest rate guarantee for the current term based on a fund equal to the greater of the Guaranteed Maturity Fund or the policy value. The option cost should be accumulated to the end of the current term at the appropriate maximum valuation rate in accordance with the SVL.

This combined amount should then be projected forward using the implied guaranteed rates for future terms, as determined according to (3) below.

The implied guaranteed rates for terms after the current are recalculated on the valuation date. The implied guaranteed rates for future terms will be based on historical moving average option costs on the valuation date according to (3) below.

Do not recalculate the Guaranteed Maturity Premium, Guaranteed Maturity Fund, or net premium. This section should be interpreted consistently when a separate index-based benefit guarantee is made on each premium received.

In determining reserves, the net premiums, as determined in Section 1 above, are payable over the period that benefits are projected to be available, but not beyond the end of the net premium payment period determined at issue.

3. Index-based benefit guarantees beyond the current term should be handled as follows:

Calculate an implied guaranteed rate, determined either at issue or at a valuation date, for the terms after the current term equal to: (a) the guaranteed interest rate for the period of the term; plus (b) the accumulated option cost expressed as a percent of the policy value to which the indexed benefit is to be applied. The accumulated option cost is the historical moving average cost of the option whose term begins at the beginning of the term, which will provide the index-based benefit in excess of any other interest rate guarantee for the term, accumulated for the length of the term at the appropriate maximum valuation rate.

The historical moving average cost of the option will be set equal to the option cost calculated based on the averages of each of the following items over the sixty months previous to the calendar year of the determination date: (a) 3% plus the annualized daily actual index volatility as the estimated implied volatility for a one year European At-The-Money option, e.g. if the average index volatility is 15%, the implied volatility for the base case option cost is 18%; (b) index dividend rate; and (c) risk free rate. The base case cost is for a one year European At-The-Money option and must be adjusted to the characteristics of the policy.

In those states that require, by regulation, that the policy valuation interest rates not exceed the “minimum guaranteed interest rate” in the policy, the “minimum guaranteed interest rate” for CRVM with UAMV is the implied guaranteed rate.

CRVM with Updated Market Value (UMV) Method

CRVM with UMV applies the Universal Life Insurance Model Regulation to equity indexed life insurance policies using the following methods:

1. Issue date calculations:

When calculating the present value of future guaranteed policy benefits at issue by projecting fund values, the fund should be projected to the end of the initial term at the guaranteed interest rate and added to the accumulated option cost for the initial term. This combined amount should

then be projected forward, using the policy guarantees to determine future death and endowment benefits. The option should provide for the indexed benefit in excess of any other interest rate guarantee for the initial term. The option cost should be as of the issue date. The option cost should be accumulated to the end of the initial term at the appropriate maximum valuation rate in accordance with the SVL. Any index-based benefit guarantees beyond the initial term should be determined as described in (3) below.

Using this method of determining the present value of future guaranteed benefits, calculate the Guaranteed Maturity Premium, Guaranteed Maturity Fund, and net premium for the policy based on guarantees at issue.

2. Valuation date calculations:

When calculating the present value of future guaranteed policy benefits at the valuation date by projecting a fund equal to the greater of the Guaranteed Maturity Fund or the policy value, this fund should be projected to the end of the current term at the guaranteed interest rate and added to the accumulated option cost for the current term. The option cost should be determined as of the valuation date. This combined amount should then be projected forward, using the policy guarantees to determine future death and endowment benefits. The option should provide for the index-based benefit in excess of any other interest rate guarantee for the current term, based on a fund equal to the greater of the Guaranteed Maturity Fund or the policy value. The option cost should be accumulated to the end of the current term at the appropriate maximum valuation rate in accordance with the SVL. Any index-based benefit guarantees beyond the current term should be treated as described in (3) below. Do not recalculate the Guaranteed Maturity Premium, Guaranteed Maturity Fund, or net premium. This section should be interpreted consistently when a separate index-based benefit guarantee is made on each premium received.

In determining reserves, the net premiums, as determined in Section 1 above, are payable over the period that benefits are projected to be available, but not beyond the end of the net premium payment period determined at issue.

3. Index-based benefit guarantees beyond the current term should be handled as follows:

At the time of calculation, fund values projected to the end of the current term should be further projected to the end of the next term at the guaranteed interest rate. This should be added to the accumulated option cost for that term. This should be done successively for each subsequent term, using the appropriate option cost for each term. The option for each term should provide for the index-based benefit in excess of any other interest rate guarantee for the term. The cost for each option should recognize the current relevant economic condition on the calculation date and be priced as if the term began on that date. The option cost for each future term should be accumulated to the end of the term at the appropriate maximum valuation rate in accordance with the SVL.

Attachment 2
Hedged as Required Criteria - Life Products

In order to use a Type 1 computational method, the appointed actuary needs to certify quarterly that it meets either the “Basic” or “Option Replication” criteria.

Basic

1. Required equivalence of characteristics between the option policies held and the options embedded in the policies for the current term with respect to specific policy features such as: index; averaging features; option type; strike price; term; etc.
2. The amount of hedge owned must substantially cover the greater of the account value or reserve. “Substantially” is measured by the guarantees in the specific policy (some policies may have longer term guarantees than others), and allows the company to assume no more than 6% per year of elective benefit decrements, unless the Commissioner agrees to a higher limit. Benefit decrements due to charges in the policy should be taken into account in the same way as they are in the indexed interest formula in the policy (i.e., if indexed interest is credited on an average fund value, then it is the projected average fund value on each policy which should be hedged.)
3. The company must have a specific plan for hedging risks associated with death benefits, early surrenders, unexpected premium payment patterns, and other potentialities. This plan must be available at issue and updated at every valuation date, or as often as the valuation actuary requirements may warrant.
4. The company must have a system in place that is used to monitor the effectiveness of its hedging strategy.
5. The company must have a stated maximum tolerance for differences between expected performance of the hedge and the actual results of the hedge.

Option Replication

1. Required equivalence of characteristics between the target of an option replication strategy employed and the options imbedded in the liabilities for the current term with respect to specific policy features such as: index; averaging features; option type; strike price; term; etc.
2. At the end of each quarter, the notional amount of the target of the option replication strategy must substantially cover the greater of the account value or reserve. “Substantially” is measured by the guarantees in the specific policy (some policies may have longer term guarantees than others), and allows the company to assume no more than 6% per year of elective benefit decrements, unless the Commissioner agrees to a higher limit. Benefit decrements due to charges in the policy should be taken into account in the same way as they are in the indexed interest formula in the policy, (i.e., if indexed interest is credited on an average fund value, then it is the projected average fund value on each policy which should be hedged.)
3. The company must have a specific plan for hedging risks associated with death benefits, early surrenders, unexpected premium payment patterns and other potentialities. This plan must be available at issue and updated at every valuation date, or as often as the valuation actuary requirements may warrant.
4. The company must have a system in place that is used to monitor the effectiveness of the company’s hedging strategy.

5. The company must have a stated maximum tolerance for differences between the expected performance of the hedge and the actual results of the hedge. The maximum tolerance test and compliance evaluation test must meet the following minimum requirements. The compliance evaluation criterion will be a retrospective correlation test performed at least on a weekly basis. The company will compare the change in the market value, from the beginning of the calendar quarter, of the hedge portfolio with the change in the market value of the target of the option replication strategy. The maximum dollar amount of difference permitted between these two changes is 10% of the beginning of period market value of the target of the option replication strategy. If the difference exceeds this limit, the following steps must be taken:
- ◆ If for a second time during a quarter the dollar amount of difference exceeds 10% of the beginning of period market value of the target of the option replication strategy, but is less than 25% of the beginning of period market value of the target of the option replication strategy, the company must notify the Commissioner in each state in which the insurer is licensed. The notification must indicate the dollar amount of reserves being hedged by the option replication strategy.
 - ◆ If at any of the weekly intervals the difference between the two changes exceeds 25% of the beginning of period market value of the target of the option replication strategy, the company must notify the Commissioner in each state in which the insurer is licensed. The notification must indicate the dollar amount of reserves being hedged by the option replication strategy and the impact on surplus of reporting the reserves based on CRVM with UMV, or CRVM with UAMV if the conditions for that method are satisfied.
 - ◆ If at any point in time during the quarter the difference between the two changes exceeds 35% of the beginning of period market value of target of the option replication strategy, the insurer is deemed to be out of compliance with the “Hedged as Required” criteria, and the company must notify the Commissioner in each state in which the insurer is licensed. The notification must indicate the dollar amount of reserves being hedged by the option replication strategy and the impact on surplus of reporting the reserves based on the CRVM with UMV, or CRVM with UAVM if the conditions for that method are satisfied.

The requirements discussed above deal with the situation in which the actual hedge underperforms relative to the expected hedge performance. The ability of an insurer to over-hedge may be constrained by other components of a state’s regulatory framework including the state’s investment article and regulations concerning the use of derivative instruments. For purposes of this Guideline, over-hedged mean that at a particular point in time, the hedge portfolio exceeds the portfolio of liabilities being hedged. If over-hedged, the excess hedging instruments are excluded from the measurements required in Item 5 of the Hedged as Required Criteria.

Attachment 3
Reasonableness of Assumptions Certification
for Implied Guaranteed Rate Method

The following certification must be filed in conjunction with each quarterly and annual statutory financial statement filed with the appropriate regulatory official in each state in which the insurer does business. The appointed actuary must sign the certification.

I, (state name and professional designation) am the appointed actuary for (company name). The company meets the Hedged as Required criteria for policies reserved under the Implied Guarantee Rate Method. I have reviewed the assumptions underlying the values assigned to all equity index options used in the determination of the implied guaranteed rate used in the calculation of reserves under the Implied Guaranteed Rate Method for all equity indexed universal life insurance policies issued or reinsured by (company name) and reported in the statutory financial statement as of (the date of valuation).

The assumptions at the start of the current term used to determine such option values for the current term are:

1. Reasonable in light of current relevant economic conditions at the start of the current term; and
2. Consistent with the comparable assumptions used to determine the statement of value of any derivative instruments as of the valuation date used to hedge the equity index-based obligations embedded in the equity indexed life policies subject to this certification.

The assumptions at issue used to determine equity index option values for terms subsequent to the current term are:

1. Determined in accordance with the Implied Guaranteed Rate Method
2. Based on quantitative data for the base case option (1-year European At-The-Money) of 3% plus ____% average annualized daily actual volatility over the 60 months previous to the calendar year of issue.
3. Reasonably adjusted to reflect the following variances from the base case due to benefit design and capital market reasons (all material adjustments should be listed)
 - a. skew adjustments
 - b. _____ (to be described by appointed actuary)
4. Reliant on the following source(s) for assumptions not prescribed by this Actuarial Guideline:
 - a. _____ (to be described by appointed actuary)

(Name of actuary)

(Signature of actuary)

(Date of certification)

Attachment 4
Reasonableness and Consistency of Assumptions Certification
for Commissioners Reserve Valuation Method with Updated Average Market Value

The following certification must be filed in conjunction with each quarterly and annual statutory financial statement filed with the appropriate regulatory official in each state in which the insurer does business. The appointed actuary must sign the certification.

I, (state name and professional designation) am the appointed actuary for (company name). I have reviewed the assumptions underlying the values assigned to all equity index options used in the determination of statutory reserves using a Type 2a computational method for all equity indexed universal life insurance policies issued or reinsured by (company name) insurance company and reported in the statutory financial statement as of (the date of valuation).

The assumptions used to determine such option values for the current term are:

1. Reasonable in light of current relevant economic conditions as of the date of valuation; and
2. Consistent with the comparable assumptions used to determine the statement of value of any derivative instruments as of the valuation date used to hedge the equity index-based obligations embedded in the equity indexed life policies subject to this certification.

The assumptions used to determine equity index option values for terms subsequent to the current term are:

1. Determined in accordance with the Commissioners Reserve Valuation Method with Updated Average Market Value
2. Based on quantitative data for the base case option (1-year European At-The-Money) of 3% plus ____% 60 -month moving average annualized daily actual volatility
3. Reasonably adjusted to reflect the following variances from the base case due to benefit design and capital market reasons (all material adjustments should be listed)
 - a. skew adjustments
 - b. _____ (to be described by appointed actuary)
4. Reliant on the following source(s) for assumptions not prescribed by this Actuarial Guideline:
 - a. _____ (to be described by appointed actuary)

 (Name of actuary)

 (Signature of actuary)

 (Date of certification)

Attachment 5
Reasonableness and Consistency of Assumptions Certification
for Commissioners Reserve Valuation Method with Updated Market Value

The following certification must be filed in conjunction with each quarterly and annual statutory financial statement filed with the appropriate regulatory official in each state in which the insurer does business. The appointed actuary must sign the certification.

I, (state name and professional designation) am the appointed actuary for (company name). I have reviewed the assumptions underlying the values assigned to all equity index options used in the determination of statutory reserves using a Type 2 computational method for all equity indexed universal life insurance policies issued or reinsured by (company name) insurance company and reported in the statutory financial statement as of (the date of valuation). The assumptions used to determine such option values are:

1. Reasonable in light of current relevant economic conditions as of the date of valuation; and
2. Consistent with the comparable assumptions used to determine the statement of value of any derivative instruments as of the valuation date used to hedge the equity index-based obligations embedded in the equity indexed life policies subject to this certification.

Actuarial Guideline XXXVII

VARIABLE LIFE INSURANCE RESERVES FOR GUARANTEED MINIMUM DEATH BENEFITS

Background

This guideline's primary focus is to clarify the appropriate projection assumptions and methodologies used to determine statutory reserve liabilities for Guaranteed Minimum Death Benefits (GMDBs) offered with variable life insurance products.

For many years, insurance companies have not applied uniform reserve standards to variable life insurance policies in general, and to GMDBs in particular. Four regulatory sources are often looked to for guidance. First, the Standard Valuation Law (SVL) requires that CRVM be based on the present value of future guaranteed benefits. Second, the Variable Life Insurance Model Regulation as revised in 1983 and again in 1989 states "Reserve liabilities for variable life insurance policies shall be established under [SVL] in accordance with actuarial procedures that recognize the variable nature of the benefits provided and any mortality guarantees." Third is the Universal Life Insurance Model Regulation and most recently the Valuation of Life Insurance Policies Model Regulation.

GMDBs are common features of variable life products. Recently, reserve methods for universal life secondary guarantees have been clarified in the Valuation of Life Insurance Policies Model Regulation. These secondary guarantees are similar to GMDBs offered with variable life policies. A Guaranteed Minimum Death Benefit is any guarantee which provides death benefit protection which would not otherwise be provided in the absence of such a guaranteed benefit or provision. An example of a GMDB is a policy in which death benefits continue in-force even if the policy value is zero. This benefit may be contingent on additional qualifications being met, such as cumulative premiums meeting some limit.

Additional examples of GMDBs are provided below. This list is not intended to include all types of GMDBs.

- A Minimum Death Benefit Provision or No Lapse provision where death benefits are guaranteed to remain in-force for a period of time even if the policy value is not greater than zero subject only to certain conditions being met such as cumulative premiums meeting a minimum amount, or if a theoretical policy value is sufficient to meet a minimum amount.
- Death Benefits that are guaranteed to be at least as large as the original face amount, regardless of investment performance which might generate negative Paid Up Additions on a traditional fixed premium variable life insurance policy.

The Variable Life Insurance Model Regulation defines the reserve methodology for variable life policies. However, currently two versions of the model regulation exist and this results in inconsistent treatment by state. These two versions include the 1983 revisions and the 1989 revisions to the model regulation. Many states have not passed either revision and therefore require direct interpretation of SVL. In practice, companies have interpreted these regulations inconsistently with regard to assumptions and/or application to current products available today. The 1983 version of the regulation treats flexible premium policies differently than scheduled premium policies. The 1983 version of the regulation did not anticipate the types of GMDBs available today which require contingent conditions to be met to maintain a death benefit guarantee, for instance specified premiums must be paid. Thus, confusion exists with regard to which valuation method is appropriate. The 1989 version makes no distinction between the scheduled premium and flexible premium policies.

This Guideline codifies the basic interpretation of reserve liabilities for variable life GMDBs by clarifying the projection assumptions and methodologies that comply with the SVL. Minimum valuation standards that may be used to determine this reserve and are not specifically addressed in this guideline are defined by SVL and other applicable state regulations. This guideline focuses on the methodology of the 1989 revisions to interpret SVL, as we believe the 1989 revision more appropriately considers the types of products and GMDBs available today.

Interpretations of both the 1983 and 1989 versions reflect the comments made in the December 1972 report which concluded that an acceptable GMDB reserve system should have the following characteristics:

1. The GMDB reserve should be held in the general account of the company so that it will be backed by the general assets of the company, most of which are debt obligations valued at amortized cost and, therefore, are of a fixed dollar nature. It would not be proper to hold the GMDB reserve in the separate account, assuming the reserve is not supported by fixed dollar assets but by assets that are moving in the opposite direction from the risk, i.e. value moving downward while the risk increases and vice versa.
2. The GMDB reserve should be adequate to cover the GMDB death claims for the next year in all but the most extreme circumstances so that the regulatory authorities can be assured the company will not run into financial trouble from this source before the next annual statement is filed.
3. The GMDB reserve should react slowly but steadily through an extended period of poor investment experience of the separate account.
4. The GMDB reserve should not cause unnecessary fluctuations in surplus by increasing too rapidly in a sharp market downswing. Also, the reserve should not decrease too rapidly in a sharp market upswing after a period of poor market performance.

This guideline maintains the four principles above in interpreting the Standard Valuation Law as it relates to variable life business and the methods defined in both the 1983 and 1989 versions of the Variable Life Insurance Model Regulation.

Reserve methodologies which recognize the variable nature of GMDB are defined in the Variable Life Insurance Model Regulation and include a One-Year Term reserve recognizing a 1/3 drop in separate account assets, the Attained Age Level Reserve (AALR) methodology and in the 1983 version, a methodology for flexible premium policies. Reserves for GMDBs are held in the general account.

This guideline recognizes the following principles when determining appropriate reserves for GMDB.

- Determine the guaranteed death benefits which are not valued in the basic policy reserves.
- Establish a reserve for these benefits over the period of time in which revenue is collected to pay for such benefits; however, no greater than the period of time these guaranteed benefits are provided.
- Collected revenue should not be de-minimus in order to reduce the reserve.
- The reserve established is in addition to basic reserves

This guideline interprets the standards for applying these methodologies. This guideline also interprets the projection assumptions to be applied to determine excess guaranteed death benefits. The guideline clarifies the use of the AALR methodology for flexible premium variable life policies with contingent

GMDB benefit structures similar to specified premium contracts. This guideline is based on the belief that the 1983 revisions did not anticipate these types of GMDB benefits on flexible premium contracts. Thus, it makes sense to interpret the 1983 revisions for these types of GMDB benefits by applying the AALR methodology when there is a contingent GMDB structure. For flexible premium plans with other types of GMDBs, the flexible premium language of the 1983 revision is used where applicable.

The AALR methodology, along with the one-year term reserve is generally consistent with the principles above in that additional reserves are established in recognition of all death benefit guarantees not reflected in basic reserves. If multiple guarantees exist all guarantees must be valued and the greatest additional reserve is held. Consecutive GMDBs are treated as a single guarantee. These reserves are funded over the period of time GMDB Revenue will be collected through either policy charges or premiums, however, not to exceed the GMDB benefit period. The AALR methodology funds any GMDB Revenue deficiency over the period of time the Revenue is collected, however, no longer than the end of the guarantee period.

GMDB reserves are held in addition to basic reserves unless the appointed actuary provides satisfactory documentation to the state of domicile insurance department stating why such reserves are redundant. For example, for traditional variable life product designs where reserves are generally determined on a tabular basis and use an assumed interest rate (AIR), if basic reserves are determined based on at least the guaranteed face amount, (i.e. ignoring any negative additions) then the guaranteed death benefit is fully reflected in the basic reserves; therefore, an additional GMDB reserve is redundant. Neither this guideline nor the 1989 amendments specifically address traditional variable life product designs, nor does this guideline specifically exclude these designs from its scope.

An additional purpose of this guideline is to emphasize the impact of Sections 3A(3) and 3A(4) in the Valuation of Life Insurance Policies Model Regulation (“XXX”) relative to reserving for variable life and variable universal life products.

Scope

The guideline applies to all variable life insurance contracts to which the Standard Valuation Law applies and which provide Guaranteed Minimum Death Benefits (GMDBs) either explicitly or implicitly.

Definitions

Attained age level reserve (AALR): The AALR is a methodology described in the 1983 and 1989 revisions to the Variable Life Insurance Model Regulation.

Catch-up provision: A Catch-up provision is a provision in the policy that gives the policyholder the right to catch up on any contingent requirements in order to maintain the GMDB.

Guaranteed Period: The guaranteed period is the period of time over which a GMDB is guaranteed regardless of the basic guarantees in the policy. A policy may have multiple guaranteed periods and GMDBs.

Guaranteed Minimum Death Benefit (GMDB): A Guaranteed Minimum Death Benefit (GMDB) is any guarantee which provides continued death benefit protection which would not otherwise be provided in the absence of such a guaranteed benefit or provision. A policy may have multiple GMDBs.

One-Year Term (OYT) reserve: The OYT reserve covers a period of no more than one year following a 1/3-asset drop. This reserve is fully described in the 1989 revision to the Variable Life Insurance Model Regulation. This guideline clarifies the methodology and the assumptions used to determine OYT reserves.

Policy Value: Policy value means, as of the valuation date, the greater of (a) zero and (b) the amount to which separately identified interest credits and/or investment return and mortality, expense, or other

charges are made under a variable life insurance policy. Subsequent to the valuation date, “policy value” means the amount determined in accordance with the procedures specified in this guideline.

Projection Assumptions: The Projection Assumptions are used to determine guaranteed death benefits. This projection of policy values uses the following assumptions:

1. Cost of insurance rates are equal to the minimum valuation mortality.
2. The GMDB is assumed to be in effect for the maximum period of the GMDB. All minimum requirements necessary to maintain the GMDB in force subsequent to the valuation date are assumed to be met at the latest point in time sufficient to maintain the GMDB through its maximum period. Contingent requirements, if any, required to reinstate or catch-up as of the valuation date are assumed to occur on the valuation date. If the GMDB would continue in effect subsequent to the valuation date with no additional actions required, contingent requirements are assumed not to resume until the latest point in time which would prevent the termination of the GMDB.
3. The general account policy values and separate account policy values are projected at the valuation interest rate. The assumed investment rate, if any, is used when determining the OYT reserve.
4. The guaranteed period covered is determined assuming all contingent requirements are met.
5. Policy options and benefits are assumed to continue unchanged as of the valuation date. Examples include fixed and variable account allocation and the death benefit option.
6. The projection of policy values is made for the entire guarantee period, regardless of whether projected policy values are positive or negative at any point in the projection. Any negative policy value would be set to zero.

The policy value is projected forward from the valuation date with valuation interest rate credits, any payments required to maintain the guarantee and valuation mortality charges (and no other credits or charges). The Guideline stipulates that “A death benefit in the absence of the guarantee is assumed to be provided as long as the projected policy value is greater than zero,” and “Any negative policy value would be set to zero.” An AALR need not be established for a VUL policy to provide for any period during which there would be a death benefit in the absence of the guarantee, since this benefit would be provided for by the policy’s basic reserve. This means that for an AALR to develop, the mortality charges must exceed the required payments plus interest credits by enough to reduce the policy value to zero during the guarantee period. Surrender charges are not relevant to this determination.

GMDB Revenue: GMDB Revenue is policy charges or premium, either implicit or explicit. These charges or premiums may or may not be explicitly stated to cover GMDB benefits. An example of an implicit premium is a positive premium necessary to maintain a target policy value in order to maintain benefits.

Term cost: Term costs are based on the guaranteed minimum death benefits in excess of the death benefits that would be provided in absence of such guarantee based on a projection of policy values using the Projection Assumptions defined above. These costs are then discounted to the valuation date. The term costs are based on minimum valuation mortality standards and a discount rate not to exceed the maximum valuation interest rate.

1/3-Asset Drop: A 1/3 reduction in separate account assets that is used in the calculation of the one-year term reserve. This 1/3 drop is not applied to fixed account assets.

Text

1. Basic Reserves:

Basic Reserves include the reserve held for death benefits provided in the absence of a GMDB. Reserve liabilities for variable life insurance policies shall be established consistent with the methodologies described in the Standard Valuation Law and in accordance with actuarial procedures that recognize the variable nature of the benefits provided and any mortality guarantees. Reserve methods described in the Variable Life Insurance Model Regulation and the Universal Life Insurance Model Regulation may be appropriately utilized to determine reserve liabilities such that application of these methods is consistent with the principles of the Standard Valuation Law.

2. Guaranteed Minimum Death Benefit Reserves:

Additional reserves are required to provide for liabilities of GMDB provisions which provide benefits that would not be provided in the absence of the guarantee. In measuring these liabilities, the basic reserve provides for death benefits which occur in the absence of the guarantee. GMDB reserves provide for the contingency of death occurring when the guaranteed minimum death benefit exceeds the death benefit that would be paid in absence of the guarantee. A consistent reserve methodology should be used regardless of whether a contract has scheduled premiums or flexible premiums.

When a contract provides multiple GMDBs and/or multiple guarantee periods, a reserve is established based on the guaranteed period which produces the greatest reserve as of the valuation date. Consecutive GMDBs are treated as a single guarantee period. The reserve methodology reflects all potential guarantee periods assuming that contingent requirements are met such as: contingent premiums paid, Catch-up Provisions or any pre-funding of contingent requirements.

For a policy under the 1989 revisions or a flexible premium policy with contingent GMDBs similar to a specified premium contract under the 1983 revision, the GMDB reserve equals the greater of (1) and (2) where (1) equals “the aggregate total of term costs” (OYT) which covers a period of no more than one year following a 1/3-asset drop, and (2) equals the AALR as described below.

For a flexible premium policy under the 1983 revisions not covered above, (where the GMDB guarantee is not contingent on any policyholder requirement), reserve liabilities for any guaranteed minimum death benefit shall be maintained in the general account of the insurer and shall be not less than the aggregate total of the term costs, if any, covering the period provided for in the guarantee not otherwise provided for by the reserves held in the separate account assuming a 1/3-asset drop, projected at the valuation interest rate.

a) One Year Term Reserves (OYT):

This reserve component equals the “aggregate total of term costs”, if any, covering a period of one full year from the valuation date, or, if less, covering the period of time death benefits are provided which are not otherwise provided for by the basic reserves. This reserve assumes any contingent requirements to maintain the GMDB are met by reflecting any Catch-up Provisions or any pre-funding of contingent requirements.

“Aggregate total term costs” equals the present value of guaranteed minimum death benefits in excess of death benefits that would be provided in absence of such guarantee, if any, prior to the end of one full year or the end of the guaranteed period if sooner. A death benefit in the absence of the guarantee is assumed to be provided as long as the projected policy value is greater than zero. Death benefits are determined by projecting the policy value following a 1/3-asset drop and using the Projection Assumptions defined above. Present values are determined using valuation mortality rates and the maximum valuation interest rate.

b) Attained Age Level Reserves (AALR):

This reserve component allows for funding GMDBs over no longer than the guaranteed period. This reserve assumes contingent requirements are met to maintain the GMDB and reflect any prepaid contingent requirements or Catch-up provisions. A death benefit in the absence of the guarantee is assumed to be provided as long as the projected policy value is greater than zero. This reserve component exists until no later than the end of the guarantee period if, on any prior valuation date, projected policy values resulted in guaranteed minimum death benefits in excess of death benefits that would be provided in absence of such guarantee. To the extent long term favorable investment performance results in redundant reserves, the valuation actuary may request permission from the state of domicile insurance department to release all or a portion of the redundant GMDB reserves. This projection of policy value is based on the Projection Assumptions defined above and does not incorporate a 1/3-asset drop.

The AALR reserve component shall not be less than zero and shall equal the “residue,” as described in paragraph (1) below, of the prior year’s AALR on the contract, with any such “residue,” increased or decreased by a “payment” computed on an attained age basis as described in paragraph (2) below.

- (1) The “residue” of the prior year’s AALR on each variable life insurance contract shall not be less than zero and shall be determined by adding interest at the maximum valuation interest rate to such prior year’s reserve, deducting the tabular claims based on the “excess”, if any, of the guaranteed minimum death benefit over the death benefit that would be payable in absence of such guarantee, and dividing the result by the tabular probability of survival. Hence, tabular costs are only deducted for years where, in the absence of the guarantee, coverage would be less than the guaranteed coverage.
- (2) The “payment” used to increase or decrease the “residue” above shall be computed so that the present value of a level payment of that amount each year over the future period for which GMDB Revenue will be collected under the contract is equal to (A) minus (B) minus (C), where, (A) is the present value of future guaranteed minimum death benefits. The future guaranteed minimum death benefits are the projected future death benefits including the GMDB. (B) is the present value of the projected future death benefits that would be payable in the absence of the GMDB. The guaranteed benefit for (A) and (B) should be calculated for the life of the policy. Both (A) and (B) are calculated based on the Projection Assumptions. (C) is any “residue,” as described in paragraph (1) above, of the prior year’s AALR on such variable contract. Minimum standards of valuation mortality assumptions and maximum valuation interest rates are used to determine present values and net level payments. The period of time in which GMDB Revenue will be collected is limited to the period of time policy values are sufficient to collect policy charges or the period of time contingent requirements will be paid to maintain the GMDB. In no event will the time period be greater than the time to the end of the guarantee period. It should also be noted that the “payment” may be negative resulting in the reserve running off over the remaining guarantee period.

c) Other Flexible Premium Policies under the 1983 revisions not included above:

The present value of potential guaranteed minimum death benefits in excess of death benefits that would be provided in absence of such guarantee is determined by using

minimum standards of valuation mortality assumptions and maximum valuation interest rates.

3. Issues:

Sections 3A(3) and 3A(4) of “XXX” state the following:

3A(3): This regulation shall not apply to any variable life insurance policy that provides for life insurance, the amount or duration of which varies according to the investment experience of any separate account or accounts.

3A(4): This regulation shall not apply to any variable universal life insurance policy that provides for life insurance, the amount or duration of which varies according to the investment experience of any separate account or accounts.

The language of these sections is clear. The reserving for variable life and variable universal life is in no way affected by the provisions of “XXX.” In particular, the 19-year select factors and the “X” factor are not applicable to the calculation of reserves for variable life and variable universal life products.

Effective Date

This guideline affects all variable life insurance contracts issued. Where the application of this Guideline produces higher reserves than the company had otherwise established by their previously used interpretation, such company must comply with this guideline effective December 31, 2001. However, such company may request a grace in period, not to exceed three (3) years, from the domiciliary Commissioner upon satisfactory demonstration of the previous interpretation and that such delay of implementation will not cause a hazardous financial condition or potential harm to its policyholders.

Retroactive application of the guideline to in-force policies to develop the current residue portion of the AALR will generally not be feasible. Therefore, the residue as of 12/31/2000 should be set equal to the greater of the amount established by the company under its current method or \$0 if the company did not previously calculate an AALR.

Actuarial Guideline XXXVIII

THE APPLICATION OF THE VALUATION OF LIFE INSURANCE POLICIES MODEL REGULATION

Introduction

The revised version of the *Valuation of Life Insurance Policies Model Regulation* (Model #830) was adopted by the NAIC in March 1999. Since that date, some questions have been raised regarding whether and how Model #830 applies to various product designs. The purpose of this guideline is to provide direction as to the application of Model #830 to such products. Specifically, this guideline provides examples of various policy features that constitute “guarantees” and gives directions on how to reserve for these guarantees in accordance with Model #830.

Obviously, new policy designs will emerge subsequent to the development of this document. No statute, regulation, or guideline can anticipate every future product design, and common sense and professional responsibility are needed to assure compliance with both the letter and the spirit of the law. While Model #830 is a complex regulation, its intent is clear: reserves need to be established for the guarantees provided by a policy. Policy designs which are created to simply disguise those guarantees or exploit a perceived loophole must be reserved in a manner similar to more typical designs with similar guarantees.

Text

The following product designs have been brought to the attention of the NAIC Life Actuarial (A) Task Force. The list below specifies reserving approaches which the Task Force regards as being most consistent with the letter and spirit of Model #830. However, the specified reserving approaches should be modified as needed to comply with the intent of this guideline that similar reserves be established for policy designs that contain similar guarantees.

1. An initial level premium rate is guaranteed for 10 years followed by increased guaranteed premiums for an additional 20 years. However, the company cannot increase premiums after year 10 (i.e., the initial premium continues to be charged) unless some specified event occurs.

The initial reserve segment is 30 years. Since the contract contains provisions that limit the company’s ability to increase premiums, then the initial premium should be treated as guaranteed for the entire 30-year period. It would be contrary to the conservative nature of statutory accounting to treat this policy the same as one in which the ability to raise premiums is unrestricted.

2. A term policy has an illustrated level premium for 30 years, the first 10 of which are guaranteed. Additionally, there is a refund option which provides that a specified refund will be paid if the premium ever increases. The refund must be requested within a limited time (e.g., 30 days) of receiving notice of the increase. Coverage terminates if the option is exercised.

This example differs from the one above in that there is no specified event that has to occur in order for the company to impose a premium increase; however, the company must provide an additional benefit to the policyholder if it exercises this right. Thus the company does not have an unrestricted right to impose an increase after 10 years. If the contract contains provisions that require that additional benefits be provided to the policyholder in the event of a premium increase, even if these benefits are lost if not claimed within a stated time frame, then the initial premiums should be treated as guaranteed for the entire 30 year period. It would be contrary to the conservative nature of statutory accounting to treat this policy the same as one in which the

ability to raise premiums does not require that additional benefits be provided. Therefore, the initial segment for this policy is 30 years.

3. An initial level premium rate is guaranteed for 10 years followed by increased guaranteed premiums for an additional 20 years. However, after year 10 the policyholder is protected against premiums being increased above the initial level, with the protection provided by a second company through either reinsurance, a second policy issued to the consumer, or an agreement between the companies.

The combined reserves of the direct writer and the second company should be no less than the amount which the direct writer would hold if (a) there were no second company and (b) the initial reserve segment were 30 years. If this condition is not met, reserve credits for the direct writer should be disallowed. The reserve held by the direct writer should be based on the initial level premium being guaranteed for 30 years.

4. A product has relatively high gross premiums but with a guaranteed dividend or guaranteed refund schedule, or by some other means guarantees a low net cost to the policyholder.

The net amount of premium (i.e., gross premium less dividends or refunds) should be used in the reserve calculation. That represents the amount the insured actually pays for coverage.

For products reinsured on either a coinsurance or modified coinsurance basis, the reinsurer's reserve calculation should also be based on the net premium (i.e., gross premiums less dividends or refunds guaranteed to be paid to the policyholder).

5.
 - a) A re-entry term product has an initial rate guarantee for 10 years, with loose or non-existent re-entry underwriting, allowing the policyholder to re-enter for an additional 20 years at specified favorable rates.
 - b) A universal life policy has provisions such that, if the UL policy lapses prior to the 10th policy anniversary because the actual accumulation value (or cash value, depending on design) falls below zero but stipulated premiums have been paid, a substitute policy is guaranteed to be issued providing the same amount of insurance coverage at the same stipulated premium for the remainder of the 10-year period plus an additional 20 years.

The reentry periods and premiums should be treated as a continuation of the initial guarantees for reserve calculation purposes. The initial reserve segment applicable to the original policy should be 30 years if the stipulated premium for the substitute policy is not high enough to trigger a new reserve segment. When the substitute policy is issued, reserves should be determined as if the coverage had been issued at the issue age and issue date of the original policy. Effectively, the company has guaranteed coverage for 30 years at the time the initial policy is issued, and the reserves established should reflect that guarantee.

6. A reinsurance treaty provides for 30 years of level premiums on a current scale but directly guarantees those premiums for only the first 10 years. However, if the reinsurer increases the premiums after 10 years, the reinsurer agrees to increase the expense allowance such that the net payments (premium minus allowance) by the direct writer remains unchanged.

Relative to the reinsurer's reserve calculation, the initial reserve segment should be 30 years and the valuation premium should be level over that period. In this instance, the additional "expense allowance" has no relationship to the expenses actually incurred by the direct writer in administering the reinsured policies. Although a bona fide expense allowance would typically not be considered in determining the valuation premiums and reserve segments, in this instance the

additional “expense allowance” has no relationship to the expenses actually incurred by the direct writer in administering the reinsured policies.”

7. A universal life policy has a cumulative “premium catch-up provision” in which the coverage is guaranteed to remain in force as long as a stipulated premium is paid each year, and if the insured is paying less than is required to maintain the guarantee, there is an unlimited right to make up past premium deficiencies.

Model #830 requires that “when a policy contains more than one secondary guarantee, the minimum reserve shall be the greatest of the respective minimum reserves at that valuation date of each unexpired secondary guarantee, ignoring all other secondary guarantees.” Since secondary guarantees with “catch-up” provisions are capable of being reinstated up to the end of the secondary guarantee period, they constitute “unexpired secondary guarantees” which must be incorporated into the calculation of “the greatest of the respective minimum reserves at that valuation date of each unexpired secondary guarantee, ignoring all other secondary guarantees.”

The basic and deficiency reserves for a secondary guarantee with a catch-up provision should be computed as if the stipulated premium requirement had been met. The basic reserve shall be reduced by the product of (a) the “catch-up amount,” if any, which would be required on the valuation date and (b) the ratio of the “initial” (i.e., before adjustment) basic reserve to the sum of the “initial” basic and deficiency reserves. In no event shall the “reduced” basic reserve be reduced below zero. The deficiency reserve shall be reduced by the product of (a) the “catch-up amount,” if any, which would be required on the valuation date and (b) the ratio of the “initial” deficiency reserve to the sum of the “initial” basic and deficiency reserves. In no event shall the “reduced” deficiency reserve be reduced below zero.

If a universal life policy with a “premium catch up provision” has a shadow account below the level necessary to maintain the secondary guarantee, then the reserve for the secondary guarantee shall be valued according to this example. The basic and deficiency reserves, before deduction for the catch-up amount, shall be calculated as specified in Section 8A, Section 8B, Section 8C or Section 8E, as applicable.

- 8A. For policies and certificates issued prior to July 1, 2005: A universal life policy guarantees the coverage to remain in force as long as the accumulation of premiums paid satisfies the secondary guarantee requirement.

First, the minimum gross premiums (determined at issue) that will satisfy the secondary guarantee requirement must be derived.

Second, for purposes of applying Sections 7B and 7C of Model #830, the “specified premiums” are the minimum gross premiums derived in “Step One.”

Third, a determination should be made of the amount of actual premium payments in excess of the minimum gross premiums. For policies utilizing shadow accounts, this will be the amount of the shadow account. For policies with no shadow accounts but which specify cumulative premium requirements, this excess will be the amount of the cumulative premiums paid in excess of the cumulative premium requirements; the cumulative premium payments and requirements should include any interest credited under the secondary guarantee (with interest credited at the rate specified under the secondary guarantee).

Fourth, a determination should be made of the single payment necessary at the valuation date to fully fund the remaining secondary guarantee assuming that the minimum gross premiums have been paid, up through the valuation date, during the secondary guarantee period. The result from “Step Three” should be divided by this number.

Fifth, compute the net single premium on the valuation date for the coverage provided by the secondary guarantee for the remainder of the secondary guarantee period, using any valuation table and select factors authorized in Section 5A of Model #830.

Sixth, the “net amount of additional premiums” is determined by multiplying the ratio from “Step Four” by the difference between the net single premium from “Step Five” and the basic and deficiency reserve, if any, computed in “Step Two.”

Seventh, a “reduced deficiency reserve” should be computed by multiplying the deficiency reserve, if any, by the one minus the ratio from “Step Four,” but not less than zero. This “reduced deficiency reserve” is the deficiency reserve to be used for purposes of Section 7D(1) of Model #830.

Eighth, the actual reserve used for purposes of Section 7D(1) of Model #830 is the lesser of: (1) the net single premium from “Step Five,” and (2) the amount of the excess from “Step Six” plus the basic reserve and the deficiency reserve, if any, computed in “Step Two.” Reduce this result by the applicable policy surrender charges, i.e., the account value less the cash surrender value. If the resulting amount is less than the sum of the basic and deficiency reserve from Step Two, then the basic and deficiency reserves to be used for the purposes of Section 7D(1) are those calculated in Step Two, and no further calculation is required.

Ninth, an “increased basic reserve” should be computed by subtracting the “reduced deficiency reserve” in “Step Seven” from the reserve computed in “Step Eight.” This “increased basic reserve” is the basic reserve to be used for purposes of Section 7D(1) of Model #830.

- 8B. For policies and certificates issued on or after July 1, 2005 and on or prior to December 31, 2006: A universal life policy guarantees the coverage to remain in force as long as the accumulation of premiums paid satisfies the secondary guarantee requirement.

First, the minimum gross premiums (determined at issue) that will satisfy the secondary guarantee requirement must be derived.

Second, for purposes of applying Sections 7B and 7C of Model #830, the “specified premiums” are the minimum gross premiums derived in “Step One.” Consistent with Model #830, the remaining steps in this guideline should be calculated on a segmented basis, using the segments that Model #830 defines for the product. Therefore, in the remaining steps, the term “fully fund the guarantee” should be interpreted to mean fully funding the guarantee to the end of each possible segment. The term “remainder of the secondary guarantee period” should be interpreted to mean the remainder of each possible segment. The total reserve should equal the greatest of all possible segmented reserves.

Third, a determination should be made of the amount of actual premium payments in excess of the minimum gross premiums. For policies utilizing shadow accounts, this will be the amount of the shadow account. For policies with no shadow accounts but which specify cumulative premium requirements, this excess will be the amount of the cumulative premiums paid in excess of the cumulative premium requirements; the cumulative premium payments and requirements should include any interest credited under the secondary guarantee (with interest credited at the rate specified under the secondary guarantee).

Fourth, as of the valuation date for the policy being valued, for policies utilizing shadow accounts, determine the minimum amount of shadow account required to fully fund the guarantee. For policies with no shadow accounts but which specify cumulative premium requirements, determine the amount of the cumulative premiums paid in excess of the cumulative

premium requirements that would result in no future premium requirements to fully fund the guarantee; the cumulative premium payments and requirements should include any interest credited under the secondary guarantee (with interest credited at the rate specified under the secondary guarantee). For any policy for which the secondary guarantee can not be fully funded in advance, solve for the minimum sum of any possible excess funding (either the amount in the shadow account or excess cumulative premium payments depending on the product design) and the present value of future premiums (using the maximum allowable valuation interest rate and the minimum mortality standards allowable for calculating basic reserves) that would fully fund the guarantee. The amount determined above for this step is to then be divided by one minus a 7% premium load allowance (0.93). The result from “Step Three” should be divided by this number, with the resulting ratio capped at 1. The ratio is intended to measure the level of prefunding for a secondary guarantee which is used to establish reserves. Assumptions within the numerator and denominator of the ratio therefore must be consistent in order to appropriately reflect the level of prefunding. The denominator is allowed to be inconsistent only by the amount of the premium load allowance as defined in this step. As used here, “assumptions” include any factor or value, whether assumed or known, which is used to calculate the numerator or denominator of the ratio.

[DRAFTING NOTE: The 7% premium load allowance approximates an average premium load level as evidenced by policies currently sold in the market. Rather than have the funding ratio vary according to the actual policy loads (which can fluctuate greatly by company and product), all companies will use an identical premium load allowance at a level approximately equal to the current industry average.]

Fifth, compute the net single premium on the valuation date for the coverage provided by the secondary guarantee for the remainder of the secondary guarantee period, using any valuation table and select factors authorized in Section 5A of Model #830.

Sixth, the “net amount of additional premiums” is determined by multiplying the ratio from “Step Four” by the difference between the net single premium from “Step Five” and the basic and deficiency reserve, if any, computed in “Step Two.”

Seventh, a “reduced deficiency reserve” should be computed by multiplying the deficiency reserve, if any, by the one minus the ratio from “Step Four,” but not less than zero. This “reduced deficiency reserve” is the deficiency reserve to be used for purposes of Section 7D(1) of Model #830.

Eighth, the actual reserve used for purposes of Section 7D(1) of Model #830 is the lesser of: (1) the net single premium from “Step Five,” and (2) the amount of the excess from “Step Six” plus the basic reserve and the deficiency reserve, if any, computed in “Step Two.” Reduce this result by the applicable policy surrender charges, i.e., the account value less the cash surrender value. Multiply this surrender charge by the ratio of the net level premium for the secondary guarantee period divided by the net level premium for whole life insurance. Calculate both net premiums using the maximum allowable valuation interest rate and the minimum mortality standards allowable for calculating basic reserves. However, if no future premiums are required to support the guarantee period being valued, there is no reduction for surrender charges. If the resulting amount is less than the sum of the basic and deficiency reserve from Step Two, then the basic and deficiency reserves to be used for the purposes of Section 7D(1) of Model #830 are those calculated in Step Two, and no further calculation is required.

Ninth, an “increased basic reserve” should be computed by subtracting the “reduced deficiency reserve” in “Step Seven” from the reserve computed in “Step Eight.” This “increased basic reserve” is the basic reserve to be used for purposes of Section 7D(1) of Model #830.

- 8C. For all policies and certificates issued on or after January 1, 2007 and on or prior to December 31, 2012: A universal life policy guarantees the coverage to remain in force as long as the accumulation of premiums paid satisfies the secondary guarantee requirement.

First, the minimum gross premiums (determined at issue) that will satisfy the secondary guarantee requirement must be derived.

Second, for purposes of applying Sections 7B and 7C of Model #830, the “specified premiums” are the minimum gross premiums derived in “Step One.” Consistent with Model #830, the remaining steps in this guideline should be calculated on a segmented basis, using the segments that Model #830 defines for the product. Therefore, in the remaining steps, the term “fully fund the guarantee” should be interpreted to mean fully funding the guarantee to the end of each possible segment. The term “remainder of the secondary guarantee period” should be interpreted to mean the remainder of each possible segment. The total reserve should equal the greatest of all possible segmented reserves. Additionally, for purposes of applying Sections 7B and 7C of Model #830, a lapse rate of no more than 2% per year for the first 5 years, followed by no more than 1% per year to the policy anniversary specified in the following table based on issue age, and 0% per year thereafter may be used. If the duration in the table is less than 5, then a lapse rate of no more than 2% per year may be used through that duration, and 0% per year thereafter.

Issue Age	Duration
0-50	30 th policy anniversary
51-60	Policy anniversary age 80
61-70	20 th policy anniversary
71-89	Policy anniversary age 90
90 and over	No lapse

Third, a determination should be made of the amount of actual premium payments in excess of the minimum gross premiums. For policies utilizing shadow accounts, this will be the amount of the shadow account. For policies with no shadow accounts but which specify cumulative premium requirements, this excess will be the amount of the cumulative premiums paid in excess of the cumulative premium requirements; the cumulative premium payments and requirements should include any interest credited under the secondary guarantee (with interest credited at the rate specified under the secondary guarantee).

Fourth, as of the valuation date for the policy being valued, for policies utilizing shadow accounts, determine the minimum amount of shadow account required to fully fund the guarantee. For policies with no shadow accounts but which specify cumulative premium requirements, determine the amount of the cumulative premiums paid in excess of the cumulative premium requirements that would result in no future premium requirements to fully fund the guarantee; the cumulative premium payments and requirements should include any interest credited under the secondary guarantee (with interest credited at the rate specified under the secondary guarantee). For any policy for which the secondary guarantee can not be fully funded in advance, solve for the minimum sum of any possible excess funding (either the amount in the shadow account or excess cumulative premium payments depending on the product design) and the present value of future premiums (using the maximum allowable valuation interest rate and the minimum mortality standards allowable for calculating basic reserves) that would fully fund the guarantee. The amount determined above for this step is to then be divided by one minus a 7% premium load allowance (0.93). The result from “Step Three” should be divided by this number, with the resulting ratio capped at 1. The ratio is intended to measure the level of prefunding for a secondary guarantee which is used to establish reserves. Assumptions within the numerator and denominator of the ratio therefore must be consistent in order to appropriately reflect the level of prefunding. The denominator is allowed to be inconsistent only by the amount

of the premium load allowance as defined in this step. As used here, “assumptions” include any factor or value, whether assumed or known, which is used to calculate the numerator or denominator of the ratio.

[DRAFTING NOTE: The 7% premium load allowance approximates an average premium load level as evidenced by policies currently sold in the market. Rather than have the funding ratio vary according to the actual policy loads (which can fluctuate greatly by company and product), all companies will use an identical premium load allowance at a level approximately equal to the current industry average.]

Fifth, compute the net single premium on the valuation date for the coverage provided by the secondary guarantee for the remainder of the secondary guarantee period, using any valuation table and select factors authorized in Section 5A of Model #830. For purposes of calculating the net single premium, a lapse rate subject to the same criteria as the lapse rate used in applying Step 2 of 8C above may be used.

Sixth, the “net amount of additional premiums” is determined by multiplying the ratio from “Step Four” by the difference between the net single premium from “Step Five” and the basic and deficiency reserve, if any, computed in “Step Two.”

Seventh, a “reduced deficiency reserve” should be computed by multiplying the deficiency reserve, if any, by the one minus the ratio from “Step Four,” but not less than zero. This “reduced deficiency reserve” is the deficiency reserve to be used for purposes of Section 7D(1) of Model #830.

Eighth, the actual reserve used for purposes of Section 7D(1) of Model #830 is the lesser of: (1) the net single premium from “Step Five,” and (2) the amount of the excess from “Step Six” plus the basic reserve and the deficiency reserve, if any, computed in “Step Two.” Reduce this result by the applicable policy surrender charges, i.e., the account value less the cash surrender value. Multiply this surrender charge by the ratio of the net level premium for the secondary guarantee period divided by the net level premium for whole life insurance. Calculate both net premiums using the maximum allowable valuation interest rate and the minimum mortality standards allowable for calculating basic reserves. If the resulting amount is less than the sum of the basic and deficiency reserve from Step Two, then the basic and deficiency reserves to be used for the purposes of Section 7D(1) of Model #830 are those calculated in Step Two, and no further calculation is required.

Ninth, an “increased basic reserve” should be computed by subtracting the “reduced deficiency reserve” in “Step Seven” from the reserve computed in “Step Eight.” This “increased basic reserve” is the basic reserve to be used for purposes of Section 7D(1) of Model #830.

Business reserved pursuant to Section 8C must be supported by an asset adequacy analysis specific to this business. This asset adequacy analysis must be performed pursuant to the requirements of Section 3 of the Standard Valuation Law. Reserves required by Section 8C shall be increased by any additional reserves required by the asset adequacy analysis.

8D. This Section 8D applies to policies and certificates (1) issued on and after July 1, 2005, (2) issued prior to January 1, 2013, and (3) in force on December 31, 2012, or on any valuation date thereafter: Under a universal life policy with a secondary guarantee, the coverage is guaranteed to remain in force as long as the accumulation of premiums paid satisfies the secondary guarantee requirement.

Notwithstanding the requirements of any of the other sections of this Actuarial Guideline (and in addition to any testing that may be required under Section 8C), this Section 8D describes the

reserving requirements with respect to universal life with secondary guarantee products, with or without a shadow account, with multiple sets of interest rate or other credits, or multiple sets of cost of insurance, expense, or other charges that may become applicable to the calculation of the secondary guarantee measures in any one policy year. This Section 8D does not apply if the minimum gross premiums for the policies are determined by applying the set of charges and credits that produces the lowest premiums, regardless of the imposition of constraints, contingencies, or conditions that would otherwise limit the application of those credits and charges. The requirements of this Section 8D apply to a company on December 31, 2012, and on any subsequent valuation date if (1) on the applicable date, the in force face amount (direct plus assumed) of universal life insurance to which this Section 8D would otherwise apply exceeds 2% of the company's face amount of individual permanent life insurance in force, or (2) on the applicable date, the company's face amount of insurance in force subject to this Section 8D exceeds \$1,000,000,000 (one billion dollars). Any company otherwise meeting these criteria may seek an exemption to the requirements under this Section 8D by filing an exemption request with its state of domicile, which will provide a copy of the request to the NAIC Financial Analysis (E) Working Group (FAWG). If the state of domicile agrees with the exemption request, then the requirements of this Section 8D do not apply to such company, provided FAWG does not conclude that the exemption would allow the company to use a reserving methodology that is not appropriate in relation to the benefits and the pattern of premiums for the plans covered.

a. Primary Reserve Methodology

The company's aggregate gross reserve before reinsurance for the business subject to this Section 8D to be reported in the December 31, 2012, and subsequent annual statutory financial statements of the company will be the aggregate reserve under 1 below, plus any excess of the aggregate reserve determined as defined in 2 below, over 1:

1. The basic and deficiency reserve as of the valuation date determined by the company according to the reserve methodology and assumptions used by the company for the statutorily-reported reserve for the business subject to this Section 8D as of December 31, 2011.
2. The reserve amount as of the valuation date determined according to the same requirements for determining the deterministic reserve in the version of the *Valuation Manual* specified under Section 11 of the *Standard Valuation Law* (Model #820) and adopted by the NAIC to govern the principle-based valuation on the valuation date, but with the two modifications identified below, determined as follows:
 - a) First, future year-by-year cash flows for the block of business subject to this Section 8D are projected as of the valuation date. In making this projection:
 - (I) the projected net investment earnings from the starting assets shall be the lesser of (i) the actual portfolio net investment returns and (ii) net investment returns based on a portfolio of A-rated corporate bonds purchased in the year of issue of the policies based on yields available in the year of issue for those bonds.
 - (II) the projected net investment rate for the reinvestment assets shall be the lesser of (i) the average over a period of 12 months, ending on the June 30 prior to the valuation date, of the monthly average of the composite yield on seasoned corporate bonds, as published by Moody's Investor Services, Inc. and (ii) 7% per annum.

- b) Second, future year-by-year net investment returns are determined from the cash flows generated in Section 8D(a)(2)(a).
- c) Third, the reserve for the policies is computed using the year-by-year net investment returns determined in Section 8D(a)(2)(b) to discount the cash flows applicable to those policies.

The company may calculate the reserves as of any December 31 as of a date no earlier than three months before that December 31 valuation date, using relevant company data, provided an appropriate method is used to adjust those reserves to the valuation date.

If the aggregate reserve determined pursuant to the second calculation above exceeds the aggregate reserve determined pursuant to the first calculation, the additional reserve to be held is deemed to be required pursuant to Model #820, Section 3 and Section 6, which provide for an analysis of reserves pursuant to an asset adequacy analysis with margins for moderately adverse assumptions. Any such excess shall be allocated to each policy in proportion to the Step 1 reserve for that policy.

b. Alternative Reserve Methodology

The requirements of subsection a. above shall not apply to a company that holds a total gross reserve amount, before reinsurance, for the business subject to this Section 8D at least equal to the total reserve determined in accordance with the November 1, 2011 Life Actuarial (A) Task Force Statement on Actuarial Guideline XXXVIII, except that for purposes of determining any deficiency reserves under Model #830, using mortality and lapse assumptions according to the same requirements for determining the deterministic reserve in the *Valuation Manual*.

c. Documentation and Reporting

Under the direction of one or more qualified actuaries, the company shall prepare a stand-alone Actuarial Memorandum covering the reserve analysis performed on the business described in this Section 8D in compliance with Section 7 of the *Actuarial Opinion and Memorandum Regulation* (Model #822) to document the assumptions, analyses and results of the reserve calculations described above. The Actuarial Memorandum shall be prepared regardless of whether the company used the Primary Reserve Methodology described in Section 8D(a) or the Alternative Reserve Methodology described in Section 8D(b). Documentation in the submitted Actuarial Memorandum must be sufficient for another actuary qualified in the same practice area to evaluate the assumptions, analyses and results, and to enable regulatory review and verification that the assumptions, analyses and results satisfy the requirements described above, as they relate to the company. In the event that the *Valuation Manual* is incomplete or unclear as to any matter, the actuary preparing the Actuarial Memorandum shall use his or her best judgment in applying the requirements of the *Valuation Manual* and shall document his or her decisions in the Actuarial Memorandum. For any business subject to this Section 8D that has been ceded by the company, the Actuarial Memorandum shall provide a listing of the assuming companies with face amount, reserve credit taken, and form of reinsurance for such business. The Actuarial Memorandum shall be submitted to the state of domicile of the company by the April 30 following the valuation date.

For reporting years prior to 2015: The state of domicile shall provide a copy of the Actuarial Memorandum to FAWG and, upon request, to any other state in which the company is licensed.

For reporting years 2015 and after: The state of domicile shall provide a copy of the Actuarial Memorandum to FAWG upon request and, upon request, to any other state in which the company is licensed.

For those companies that used the Primary Reserve Methodology described above, the Actuarial Memorandum shall also provide with respect to the business subject to this Section 8D a description of the simplifications, approximations and modeling efficiency (aggregation) techniques used to calculate the reserve amount set forth in Subsection 2 of the Primary Reserve Methodology (i.e., Section 8D(a)(2)) and a clear indication that, upon request, information may be obtained that is adequate to permit the audit of any subgroup of the aggregated reserve amounts to ensure that the total of the seriatim (policy-by-policy) reserve calculations produces a reserve not materially different than the aggregated reserve amount determined pursuant to Subsection 2 of the Primary Reserve Methodology (i.e., Section 8D(a)(2)).

Along with the filing of the Actuarial Memorandum pertaining to the December 31, 2012 valuation date, those companies using the Primary Reserve Methodology above shall also submit a report to its state of domicile indicating what the gross reserve before reinsurance for the business subject to this Section 8D would be as of December 31, 2012 if the reserve had been determined pursuant to the methodology and experience assumptions used to determine the reserve set forth in Subsection 2 of the Primary Reserve Methodology (i.e., Section 8D(a)(2)), except using a net reinvestment return rate assumption not greater than the maximum valuation interest rate for the year of issue of each policy set forth in Model #820. The company shall include in this report what its (i) total adjusted capital and (ii) company action level risk based capital would be if the company held the reserve calculated pursuant to this methodology rather than the reserve actually reported for the applicable business in the annual statement submitted by the company to the NAIC. The report described in this paragraph will be provided by the company to the state of domicile, which will forward a copy to FAWG. Upon request, the state of domicile will also forward a copy of this report to any other state in which the company is licensed. The state of domicile, FAWG, and any other state receiving the report will treat it as containing confidential information. The report is to be provided for informational purposes only, and it is to be considered and used as one additional piece of information to be evaluated in the context of the company's overall financial position.

For reporting years prior to 2015: The domestic state will perform a review of the Actuarial Memorandum in consultation with FAWG to ensure the company's reserve calculations have been performed according to the requirements of this Section 8D.

If:

- the company reports in its financial statements the reserve level required above, adjusted for any phase-in period approved by the company's state of domicile, and
- the company complies with any applicable phase-in period made by the state of domicile with respect to such additional reserves, and
- FAWG agrees with the state of domicile's decisions,

FAWG shall issue a confidential report to non-domiciliary states indicating that the company's reserving methodology is appropriate in relation to the benefits and the pattern of premiums for the plans covered. If FAWG does not agree with the state of domicile's decisions, FAWG shall issue a confidential report to non-domiciliary states indicating that the company's reserving methodology is not appropriate in relation to the benefits and the pattern of premiums for the plans covered.

For reporting years 2015 and after: The domestic state will perform a review of the Actuarial Memorandum to ensure the company's reserve calculations have been performed according to the requirements of this Section 8D and may consult with FAWG regarding this review.

If FAWG does not agree with the state of domicile's decisions, FAWG shall issue a confidential report to non-domiciliary states indicating that the company's reserving methodology is not appropriate in relation to the benefits and the pattern of premiums for the plans covered.

- 8E. For policies and certificates issued on or after January 1, 2013, except for ULSG policies and certificates for which the company elects or is required to apply VM-20 as the reserve standard, per *Valuation Manual* requirements: For a universal life policy or certificate that guarantees the coverage to remain in force as long as the accumulation of premiums paid satisfies the secondary guarantee requirement.

Step 1: The first step is to derive the minimum gross premiums for the policy or certificate (to be determined at issue). Except as indicated for policies and certificates described in Method I Policy Design #3 (described below), the minimum premiums so derived must satisfy the secondary guarantee requirement. Model #830, Section 7A(4) does not apply in determining the minimum gross premiums for policies and certificates described in this Section 8E.

I) Methodology for determining the minimum gross premiums for certain designs ("Method I").

1. Policy Design #1: For a policy containing a secondary guarantee that uses a shadow account with a single set of charges and credits, the minimum gross premium for any policy year is the premium that, when paid into a policy with a zero shadow account value at the beginning of the policy year, produces a zero shadow account value at the end of the policy year, using the guaranteed shadow account charges and credits (e.g., interest credited rate, mortality charges, premium loads and expense charges) specified under the secondary guarantee.
2. Policy Design #2: For a policy that compares paid accumulated premiums to minimum required accumulated premiums (cumulative premium policy), with both accumulations based on a single set of charges and credits specified under the secondary guarantee, the minimum gross premium for any policy year is the premium that, when paid into a policy for which the accumulated premiums equals the minimum required accumulated premiums at the beginning of the policy year, results in the paid accumulated premiums being equal to the minimum required accumulated premiums at the end of the policy year.
3. Policy Design #3: If, for any policy year, a shadow account secondary guarantee, a cumulative premium secondary guarantee design, or other secondary guarantee design, provides for multiple sets of charges and/or credits, then the minimum gross premiums shall be determined by applying the set of charges and credits in that policy year that produces the lowest premiums, ignoring the constraint that such minimum premiums satisfy the secondary guarantee requirement and ignoring any contingencies or conditions that would otherwise limit the application of those charges and credits.

Notwithstanding the language in the approaches described above, the guaranteed (including conditionally guaranteed) policy credits for each year shall be limited as to magnitude in order for minimum gross premiums to be determined consistent with any of the policy designs above. The limitations must be met at the time of each product filing and also when guaranteed credits or charges for each such product are revised. For this purpose, policy credits based on the interest or accumulation rates in the policy shall not exceed the "Index" (defined in the next sentence) plus 3% per annum. The Index used to establish the limitation as to magnitude shall be either (i) the monthly average of the composite yield on seasoned corporate bonds as published by Moody's Investors Service, Inc., for the month immediately preceding the date of the Actuarial Opinion required under this Section 8E and described below, or (ii) the monthly average over a period of twelve months, ending on the June 30 preceding the date of the Actuarial Opinion required below, of the composite yield on seasoned corporate bonds, as published by Moody's Investors Service, Inc. The averaging period chosen by the company must be elected at time of product

filing and consistently used for that product thereafter even if guaranteed credits or charges are subsequently revised for that product.

II) Methodology for determining the minimum gross premiums for other designs (“Method II”).

Unless otherwise provided in this Section 8E, the minimum gross premiums shall be the lowest schedule of premiums that keep the policy in force over the life of the secondary guarantee period and that produce the greatest deficiency reserve at issue. If deficiency reserves produced at issue are all zero, then the smallest absolute value of the difference between “quantity A” set forth in Model #830, Section 5B, over the basic reserve shall be considered the greatest deficiency reserve. For purposes of this Step 1, in deriving the deficiency reserve associated with a particular schedule of gross premiums, the X factors used shall be set equal to 1 for all durations, issue ages, and risk classes.

For policies that use a shadow account, and for cumulative premium policies, the schedule of premiums that keep the policy in force over the life of the secondary guarantee period and that produce the greatest deficiency reserve at issue shall be determined assuming the following premium-paying patterns for premiums actually paid under the policy:

- Level premiums for the life of the secondary guarantee but not beyond the duration that premiums may be paid under the policy, and
- Increasing premiums over the life of the secondary guarantee (including any resulting reserve segments created), but not beyond the durations that premiums may be paid under the policy, and
- Combinations of the above premium patterns including higher initial premiums for funding levels to have access to better charges and credits with combinations of level and increasing premium patterns thereafter.

For all policies and certificates subject to this Step 1 of Method II of this Section 8E, the company shall also perform a good faith high-level analytical review of the product design with respect to the premium payment patterns to be expected with respect to that design. The review should consider whether there are situations whereby the product design is likely to elicit a pattern of premium payments that, if paid, would provide the insured with access to lower charges and/or higher credits than those that would apply assuming the premium paying patterns required to be tested under this Section 8E and thereby result in the need for a deficiency reserve significantly in excess of that determined using the schedules of minimum gross premiums determined pursuant to the premium payment patterns required to be tested under this Section 8E. To the extent identified, the company shall use such other premium payment patterns it determines are likely to result in the need for a greater deficiency reserve than implied by the premium payment patterns required to be tested under this Section 8E in determining the schedule of minimum gross premiums and related deficiency reserve. In performing this analytic review, the company shall consider payment patterns which keep the policy in force over the lifetime of the secondary guarantee.

Step 2: For purposes of applying Section 7B and Section 7C of Model #830, the “specified premiums” are the minimum gross premiums derived in Step 1. Consistent with Model #830, the remaining steps in this guideline should be calculated on a segmented basis, using the segments that Model #830 defines for the product. Therefore, in the remaining steps, the term “fully fund the guarantee” should be interpreted to mean fully funding the guarantee to the end of each possible segment. The term “remainder of the secondary guarantee period” should be interpreted to mean the remainder of each possible segment. The total reserve should equal the greatest of all possible segmented reserves. Additionally, for purposes of applying Section 7B and Section 7C of Model #830, the lapse rate used shall be no more than 2% per year for the first 5 years,

followed by no more than 1% per year to the policy anniversary specified in the following table based on issue age, and 0% per year thereafter. If the duration in the table is less than 5, then a lapse rate of no more than 2% per year may be used through that duration, and 0% per year thereafter.

Issue Age	Duration
0-50	30 th policy anniversary
51-60	Policy anniversary age 80
61-70	20 th policy anniversary
71-89	Policy anniversary age 90
90 and over	No lapse

Step 3: A determination should be made of the amount of actual premium payments greater than or less than the minimum gross premiums. For policies using shadow accounts and qualifying under one of the Policy Designs of Method I, this will be the amount of the shadow account. For policies using shadow accounts whose minimum gross premium is determined under Method II, this will be the amount of the shadow account minus the amount that would be in the shadow account if the minimum gross premiums used to calculate basic and deficiency reserves in Step 2 were paid. This result may be negative. For cumulative premium policies whose minimum gross premiums are determined under Method I, this excess will be the amount of cumulative premiums paid over the cumulative premium requirements. For cumulative premium policies whose minimum gross premiums are determined under Method II, this excess will be the amount of the cumulative premiums paid minus the cumulative premium using the minimum gross premiums used to calculate basic and deficiency reserves in Step 2. This result may be negative. The cumulative premium payments and requirements should include any interest credited under the secondary guarantee (with interest credited at the rate specified under the secondary guarantee).

Step 4: As of the valuation date for the policy being valued, for policies using shadow accounts, determine the minimum amount of shadow account required to fully fund the guarantee. For cumulative premium policies, determine the minimum amount of the cumulative premiums required to fully fund the guarantee less the cumulative premium requirements. For any policy for which the secondary guarantee cannot be fully funded in advance, solve for the minimum sum of any possible excess funding (either the amount in the shadow account or excess cumulative premium payments depending on the product design) and the present value of future premiums (using the maximum allowable valuation interest rate and the minimum mortality standards allowable for calculating basic reserves) that would fully fund the guarantee. For shadow account policies, if the minimum gross premium is determined according to Method II and the Step 3 amount is positive then the amount determined above for this step is reduced by any positive shadow account based on minimum gross premiums. For cumulative premium policies, if the minimum gross premium is determined according to Method II and the Step 3 amount is positive then the amount determined above for this step is reduced by the excess of cumulative premiums, assuming minimum gross premiums are paid, over the cumulative premium requirements. For shadow account policies, if the minimum gross premium is determined according to Method II and the Step 3 amount is negative then the amount determined above for this step is replaced by the amount of the shadow account based on the minimum gross premiums. For cumulative premium policies, if the minimum gross premiums are determined by Method II and the Step 3 amount is negative then the amount determined above for this step is replaced by the excess of cumulative premiums, assuming minimum gross premiums are paid, over the cumulative premium requirements.

The amount determined above for this step is then divided by one minus a 7% premium load allowance (0.93).

The result from Step 3 should be divided by the number above, with the resulting ratio capped at 1 and no less than (-1). The ratio is intended to measure the level of prefunding for a secondary guarantee and is used to establish reserves. Assumptions within the numerator and denominator of the ratio therefore must be consistent in order to appropriately reflect the level of prefunding. The denominator is allowed to be inconsistent only by the amount of the premium load allowance as defined in this step. As used here, “assumptions” include any factor or value, whether assumed or known, that is used to calculate the numerator or denominator of the ratio.

[DRAFTING NOTE: The 7% premium load allowance approximates an average premium load level as evidenced by policies currently sold in the market. Rather than have the funding ratio vary according to the actual policy loads (which can fluctuate greatly by company and product), all companies will use an identical premium load allowance at this 7% level, which is approximately equal to the current industry average.]

Step 5: Compute the net single premium on the valuation date for the coverage provided by the secondary guarantee for the remainder of the secondary guarantee period, using any valuation table and select factors authorized in Section 5A of Model #830. For purposes of calculating the net single premium, a lapse rate subject to the same criteria as the lapse rate used in applying Step 2 may be used.

Step 6: If the amount in Step 3 is positive the “net amount of additional premiums” is determined by multiplying the ratio from Step 4 by the difference between the net single premium from Step 5 and the basic and deficiency reserve, if any, computed in Step 2.

If the amount in Step 3 is negative, the “net amount of additional premiums” is determined by multiplying the ratio from Step 4 by the basic reserves, if any, computed in Step 2. This result will be negative or zero. Subtract the deficiency reserve calculated in Step 2 from this result and then add the following amount, depending on whether the policy is a shadow account policy or a cumulative premium policy:

- a) If a shadow account policy add the following:
The deficiency reserve at issue calculated using X factors associated with the premium paying pattern used in determining the greatest deficiency reserve in Method II, Step 1, multiplied by one minus the ratio of the amount of the shadow account divided by minimum amount in the shadow account that would fully fund the guarantee. This amount in Step 6(a) is not to be less than zero.
- b) If a cumulative premium policy add the following:
The deficiency reserve at issue calculated using X factors associated with the premium paying pattern used in determining the greatest deficiency reserve in Method II, Step 1, multiplied by one minus the ratio of the amount of cumulative premiums paid divided by the minimum amount of cumulative premiums required to fully fund the guarantee. This amount in Step 6(b) is not to be less than zero.

Step 7: A “reduced deficiency reserve” shall be computed by multiplying the deficiency reserve, if any, by one minus the ratio (such ratio not to be set less than zero) from Step 4; this final amount also not to be set less than zero. This “reduced deficiency reserve” is the deficiency reserve to be used for purposes of Section 7D(1) of Model #830.

Step 8: The reserve used for purposes of Model #830, Section 7D(1), is as follows.

- a) Take the lesser of:
 - 1) the “net amount of additional premiums” from Step 6 plus the basic reserve and the deficiency reserve, if any, computed in Step 2, and
 - 2) the net single premium from Step 5.

- b) Reduce the result in Step 8(a) by the applicable policy surrender charges (i.e., the account value less the cash surrender value). Multiply this surrender charge by the ratio of the net level premium for the secondary guarantee period divided by the net level premium for whole life insurance. Calculate both net premiums using the maximum allowable valuation interest rate and the minimum mortality standards allowable for calculating basic reserves.

- c) Calculate the reserve floor:
 - 1) If the result in Step 3 is negative, then the reserve floor shall equal the sum of the Step 2 basic and deficiency reserves and the amount from Step 6.
 - 2) If the result in Step 3 is not negative, then the reserve floor shall equal the sum of the Step 2 basic and deficiency reserves without any adjustment.

The reserve to be used for purposes of Model #830, Section 7D(1) is the greater of the resulting amount from Step 8(b) above and the reserve floor.

Step 9: An “increased basic reserve” shall be computed by subtracting the “reduced deficiency reserve” in Step 7 from the reserve computed in Step 8. This “increased basic reserve” is the basic reserve to be used for purposes of Model #830, Section 7D(1).

Actuarial Opinion and Company Representation Requirements

If a company uses one of the Policy Design methodologies described above in Method I of this Section 8E to determine the minimum gross premiums in Step 1, the company shall submit to its state of domicile at the time of filing/approval of a new product, or by December 31, 2012, for current products that will be issued in 2013 or thereafter, and at any time when rates and/or charges are changed, an Actuarial Opinion signed by the Appointed Actuary and a Representation of the Company signed by a Senior Officer of the company regarding the applicable policy form(s) that states:

Actuarial Opinion

“I, (name and professional designation), am the appointed actuary for (company name). I have examined the actuarial assumptions and actuarial methods used in determining the reserves described herein, and, in my opinion: (1) the product referenced herein meets the definition of Policy Design # ___ described in Method I in Section 8E of Actuarial Guideline XXXVIII (AG 38); (2) notwithstanding the language in Policy Design # ___, the guaranteed (including conditionally guaranteed) policy credits in the product available for any year do not exceed the “Index” defined in Method I in Section 8E of AG 38 plus 3% per annum; and (3) the minimum gross premiums determined under Policy Design # ___ are not inconsistent with the minimum premiums, charges and credits that are expected to apply under the policy.”

(Name of actuary, printed or typed)
 (Signature of actuary)
 (Date signed)

Company Representation

“(company name) hereby represents: (1) that the product referenced herein meets the definition of Policy Design # ___ described in Method I in Section 8E of Actuarial Guideline XXXVIII (AG 38); (2) notwithstanding the language in Policy Design # ___, the guaranteed (including conditionally guaranteed) policy credits in the product available for any year do not exceed the “Index” defined in Method I in Section 8E of AG 38 plus 3% per annum; and (3) the minimum gross premiums determined under Policy Design # ___ are not inconsistent with the minimum premiums, charges and credits that are expected to apply under the policy.”

(Name of company Officer, printed or typed)
 (Signature of company Officer)
 (Date signed)

For reporting years prior to 2015: The state of domicile shall provide a copy of the Actuarial Opinion and the Company Representation to FAWG and, upon request, to any state in which the company plans to issue the policy that is the subject of the Actuarial Opinion and Company Representation.

For reporting years 2015 and after: The state of domicile shall provide a copy of the Actuarial Opinion and the Company Representation to FAWG, upon request, and, upon request, to any state in which the company plans to issue the policy that is the subject of the Actuarial Opinion and Company Representation.

Policy Design

For reporting years prior to 2015: If a company develops reserves based on Method II of this Section 8E, the company shall submit a report from its Appointed Actuary prior to issuing policies on that form to its state of domicile, which will provide a copy to FAWG and (upon request) to any state in which the company plans to issue the product, that briefly describes the analytical review performed, the company’s conclusions following the analytical review, and whether any additional premium payment patterns other than those required by this Section 8E were tested as a result of the review. If FAWG agrees with the state of domicile’s decisions with respect to the company’s Method II reserving methodology, FAWG shall issue a confidential report to non-domiciliary states indicating that the company’s reserving methodology is appropriate in relation to the benefits and the pattern of premiums for the plans covered. If FAWG does not agree with the state of domicile’s decisions with respect to the company’s Method II reserving methodology, FAWG shall issue a confidential report to non-domiciliary states indicating that the company’s reserving methodology is not appropriate in relation to the benefits and the pattern of premiums for the plans covered.

For reporting years 2015 and after: If a company develops reserves based on Method II of this Section 8E, the company shall submit a report from its Appointed Actuary prior to issuing policies on that form to its state of domicile, which will provide a copy to FAWG, upon request, and (upon request) to any state in which the company plans to issue the product, that briefly describes the analytical review performed, the company’s conclusions following the analytical review, and whether any additional premium payment patterns other than those required by this Section 8E were tested as a result of the review. If FAWG does not agree with the state of domicile’s decisions with respect to the company’s Method II reserving methodology, FAWG shall issue a confidential report to non-domiciliary states indicating that the company’s reserving methodology is not appropriate in relation to the benefits and the pattern of premiums for the plans covered.

Effective Date

With the exception of Steps 3 through Step 9 of Section 8A and all of Section 8B, Section 8C, Section 8D and Section 8E, the scope of this guideline shall be inclusive of policies issued on and after the earlier of a state's adoption of the revised Model #830 (adopted by the NAIC in March 1999) or the statutory accounting practices and procedures as set forth in the NAIC *Accounting Practices and Procedures Manual*. All of Section 8A, Section 8B, Section 8C, Section 8D and Section 8E shall be applicable to policies and certificates issued on or after the later of the date of a state's adoption of the revised Model #830 and January 1, 2003, subject to the dates and/or applicable scope specified in Section 8A, Section 8B, Section 8C, Section 8D and Section 8E.

Actuarial Guideline XL

GUIDELINE FOR VALUATION RATE OF INTEREST FOR FUNDING AGREEMENTS AND GUARANTEED INTEREST CONTRACTS (GICS) WITH BAIL-OUT PROVISIONS

PURPOSE

The purpose of this Guideline is to interpret the Standard Valuation Law (SVL) for assignment of appropriate valuation interest rates to risks embedded in bail-out provisions under Funding Agreements and Guaranteed Interest Contracts.

BACKGROUND

Funding Agreements (FAs) and other types of Guaranteed Interest Contracts (GICs) typically issued to tax-exempt municipal bonds, money market funds and securities lending funds, often contain bail-out provisions that allow the contractholders to get their money back at full book value. Such provisions may be triggered by the credit rating downgrade of the issuer below a given level or may be at a given period's notice to the contractholder, e.g. 7, 30, 90 or 180 days' notice. The contract language for these provisions may be as follows:

1. In the event that the investment provider (i.e. the insurance company) is downgraded below *A-/A3* by S & P and/or Moody's respectively, the contract holder has the right to terminate the contract and receive the remaining principal and accrued interest without penalty. [In most cases the issuer has the alternate option to provide a replacement contract or post collateral or do a credit wrap.]
2. Each party has the right to terminate the contract before maturity by giving the other at least *7/30/90 or 180-days* notice in writing. At such termination the principal and accrued interest is payable with no penalty.

Contracts with downgrade provision

The bulk of the contracts issued with a downgrade provision are fixed rate FAs or GICs issued in connection with tax-exempt municipal bonds. These contracts can be short-term or long-term. Short-term contracts typically have an average life of around one-year, and are intended for municipal bond funds for construction, acquisition, housing, tax revenue anticipation notes (TRANS), etc. In these types of funds the cash-flow projections are provided when the case is underwritten, but there may be variability in the actual withdrawals. Any outstanding principal and interest is payable at maturity.

Long-term contracts are issued in connection with the debt service reserve (DSR) or the float fund of the bond issue, and mature at the same time as the bonds, which can be as long as 30 years. The float fund takes in deposits, and pays out the half-yearly interest and principal (if any is due) on the bonds. It runs to near zero about twice a year, after each half-yearly coupon payment. The DSR is a contingent fund for a rainy day to prevent a missed coupon or principal payment on the bond. The DSR has a single deposit that is typically 10% of the bond issue.

Contracts with put provision

FAs or GICs with put provisions are generally issued to money market funds subject to Rule 2a-7 of the Investment Company Act. Rule 2a-7 provides guidelines on liquidity, requiring funds available at book value subject to certain notification periods. Additionally, these contracts usually have downgrade provisions. Even if the downgrade provision is not in the contract, it can be assumed that the put will be exercised on downgrade, since a certain level of credit is also a Rule 2a-7 requirement.

Typically, these FAs or GICs guarantee a floating rate of interest linked to an index like LIBOR, which is paid out and reset periodically. Most contracts have fixed maturity dates when the principal is returned. Generally the FAs or GICs are the higher yielding assets of the money market funds, and therefore puts are not expected to be exercised.

Risks

Both the downgrade and the put provisions present liquidity or concentration type of risks to the issuer, i.e. if a critical event occurs, a substantial part of the whole block of business is likely to be liquidated. Sufficient asset liquidity, prudent A/L management, cash flow testing, hedging strategies, etc. can mitigate these risks. Also, companies generally have contractual provisions providing alternative options.

Downgrade provision:

The main risk here is that, upon downgrade to the trigger level, a company may have to realize its assets at a market loss in order to pay out at book. If the downgrade happens in a falling interest rate environment there is no risk of a market loss as the underlying assets are likely to be at a higher market value. On the other hand if the downgrade occurs in a rising interest rate environment, market value losses would occur when the company sells assets to pay out liabilities at book value.

Companies have written provisions in their contracts that provide alternate options to paying at book value in a rising interest rate environment:

“Novation/Assignment” option: The novation/assignment option allows the company to transfer its liabilities to another funding agreement provider that meets the credit rating requirements of the contractholder. In a rising interest rate environment, the new provider should be willing to pay a “premium” to assume a liability crediting a below market interest rate. In a perfectly efficient market this “premium” should precisely offset the market value loss upon the sale of the asset. In practice, however, it is less likely that the “premium” would fully offset the market value loss since:

- The new provider may view the liability risk somewhat differently
- The new provider may try and take advantage of the situation of the downgraded company
- There may be a large volume of these types of contracts in the market, etc.

However, the “premium” payable by the new provider could provide a substantial offset against the market value loss incurred by the downgraded company.

“Collateralization” option: This option allows the company to post assets as collateral for the benefit of the contractholder, as an alternative to payment at book value. The collateral posted would have to meet the credit requirements of the contractholder, which could be government or agency securities. Usually the collateral posted is required to have a cushion, typically ranging from 102% to 105%.

Upon trigger of the downgrade provision, the company would need to have suitable assets in its portfolio that are available for use as collateral, and also acceptable to the contractholder. In addition, there will be administrative and custodial expenses/fees of establishing and monitoring collateral levels. In some states there may also be legal restrictions on encumbering assets that back policyholder claims.

If the downgraded company can overcome the above constraints, then collateralization is another alternative of maintaining the contract and not having to pay out at book value.

“Credit Wrap” option: Under this arrangement the contract is issued out of a separate account which is guaranteed by a financial guarantee insurer. Effectively, the credit rating of the guarantor passes through to meet the credit requirement of the FA or GIC. [A number of FAs or GICs requiring a higher credit rating are currently being written in this way.]

The contract being wrapped has to meet certain criteria before the financial guarantee insurers are willing to wrap. Generally, the guarantor would also require higher credit rated securities in the separate account, which could be government or agency, and would require these in the 102% to 105% range. There will also be administrative and custodial expenses of establishing and monitoring the separate account in addition to the wrap fee payable to the mono-line insurer.

Although at significant cost, this option does provide the downgraded company a viable alternative to paying out at book value.

Put provision:

The put provision is not tied to a particular event but can contractually be exercised by giving the required days' notice. It has been argued that this provision is there to meet the Rule 2a-7 liquidity requirements and in practice is unlikely to be exercised, particularly since the FAs or GICs are one of the higher yielding assets of the money market portfolio. However, it is a contractual option and if, for example, the issuer were in financial difficulties, it will be exercised. Past experience suggests this is the case.

The put provision therefore presents a liquidity or concentration risk similar to that of downgrade—it is likely to be exercised in bulk upon happening of a critical event. Similar considerations apply, i.e. in a rising interest rate environment market value losses would occur when the company sells assets to pay out liabilities at book value.

Reserves

For reserving the Standard Valuation Law applies. However, when the SVL was enacted, these types of bail-out provisions did not exist, and were therefore not addressed explicitly. The purpose of this Guideline is to interpret the SVL for assignment of appropriate valuation interest rates to risks embedded in these bail-out provisions.

Other Actuarial Guidelines have provided similar interpretations. For example, Guideline XIII addresses interest bailout provisions under annuity contracts, Guideline XXX provides for participant directed withdrawal provisions under GICs, and Guideline XXXIII covers the elective and non-elective benefits under individual annuity contracts.

Plan Types

The SVL utilizes a concept known as Plan Type, which was designed to distinguish between the various levels of disintermediation risks—the greater the disintermediation risk for a company, the more conservative is the resulting valuation rate. Plan Types designated in the model SVL are defined as follows:

Plan Type A: At any time policyholder may withdraw funds only (1) with an adjustment to reflect changes in interest rates or asset values since receipt of the funds by the insurance company, or (2) without such adjustment but in installments over five years or more, or (3) as an immediate life annuity, or (4) no withdrawal permitted.

Plan Type B: Before expiration of the interest rate guarantee, policyholder may withdraw funds only (1) with an adjustment to reflect changes in interest rates or asset values since receipt of the funds by the insurance company, or (2) without such adjustment but in installments over five years or more, or (3) no withdrawal permitted. At the end of interest rate guarantee, funds may be withdrawn without an adjustment in a single sum or installments over less than five years.

Plan Type C: Policyholder may withdraw funds before expiration of interest rate guarantee in a single sum or installments over less than five years either (1) without adjustment to reflect changes in interest

rates or asset values since receipt of the funds by the insurance company, or (2) subject only to a fixed surrender charge stipulated in the contract as a percentage of the fund.

TEXT

For the purpose of the application of the Standard Valuation Law to FAs and GICs, the annuities and GIC valuation interest rates are to be used. The bailout provisions described above shall be treated as a withdrawal by the policyholder at book value, and the underlying contracts shall be classified as Plan Type C.

However, for contracts containing written provisions that allow the insurance company alternate options to paying out at book value, the valuation actuary may use a valuation rate of interest higher than Type C. In no event may the valuation interest rate be greater than that applicable to similar contracts with no put or bailout provisions. If a provision requires over-collateralization and/or use of high credit quality assets, this should be adequately reflected in the reserves.

If a higher interest rate than Type C is used, the valuation actuary must be satisfied and be able to demonstrate that the written provisions substantially reduce the liquidity risk. In addition, the valuation actuary must be satisfied, and should periodically review, that there are other risk management measures in place to reduce the liquidity or concentration risk, taking into consideration at least the following:

- Readily liquidated assets at nil or minimal market-value loss
- Cash-flow testing results
- Standby lines of credit available and other liquidity facilities established
- Hedges in place with liquidity options
- High credit quality assets available for use as collateral.

Not for Distribution

Actuarial Guideline XLI

PROJECTION OF GUARANTEED NONFORFEITURE BENEFITS UNDER CARVM

I. Background

The following is an excerpt from the October 21, 2003, Report of the American Academy of Actuaries' Life Valuation Subcommittee:

Annuity SNFL Impact on Reserves

Per the Standard Valuation Law, Commissioner's Annuity Reserve Valuation Method (CARVM) is:

“the greatest of the respective excesses of the present values, at the date of valuation, of the future guaranteed benefits, *including guaranteed nonforfeiture benefits*, provided for by the contracts at the end of each respective contract year, over the present value, at the date of valuation, of any future valuation considerations derived from future gross considerations, required by the terms of the contract, that become payable prior to the end of the respective contract year.”

Historically the guaranteed nonforfeiture benefit calculation has been determined at issue (e.g. 90 percent of premiums accumulated at three percent interest). The recent change to the Standard Nonforfeiture Law for Individual Deferred Annuities has changed this.

Nonforfeiture Rate

The new Standard Nonforfeiture Law for Individual Deferred Annuities has changed the nonforfeiture rate from being static to being dynamic. Under the old law, the nonforfeiture interest rate was three percent. The revised law bases the nonforfeiture rate on the five-year Constant Maturity Treasury Rate less 125 basis points (bps). The nonforfeiture rate is subject to a minimum of one percent and a maximum of three percent. Additional enhancements include the ability to reset the nonforfeiture rate at a date predetermined in the contract and allowing an additional reduction (offset) for Equity Indexed Annuities.

The nonforfeiture rate can be reset at a date predetermined in the contract (e.g. five years from issue) and based on a formula specified in the contract. The same requirements applicable to the initial rate apply to the re-determined rate.

The revised law allows an additional offset to the nonforfeiture rate for contracts that provide substantive participation in an equity indexed benefit. This offset ranges from 0 bps to 100 bps.

The ability to re-determine the nonforfeiture rate and that the EIA offset may be reevaluated in the future raises some issues with the CARVM calculation.

In doing a CARVM projection, what should be the assumed interest rate? Should the option depend on whether there are re-determination provisions? Should the option depend on whether the product relies on an equity indexed offset?

The Report further states:

The minimum guaranteed interest rate in the contract might be different than the minimum nonforfeiture rate. To the extent that the guaranteed values in the contract are always greater than the minimum nonforfeiture benefits, then the nonforfeiture values do not come into play.

This Guideline specifies how to determine the nonforfeiture interest rate used in determining the minimum nonforfeiture benefits guaranteed under the contract. As noted in the Report, the minimum nonforfeiture benefits may be less the guaranteed values otherwise provided by the contract. Where this is the case, the higher guaranteed values are used in the CARVM calculation, and “the nonforfeiture values do not come into play.”

It should also be noted that requirements for projecting guarantees exist in other regulations and guidelines, such as the specifications in Actuarial Guideline XXXV (“The Application of the Commissioners Annuity Reserve Method to Equity Indexed Annuities”) for projecting equity-indexed guarantees. The specifications of this Guideline are in addition to any other requirements.

II. Scope

This Guideline applies to contracts subject to CARVM and the Standard Nonforfeiture Law for Individual Deferred Annuities (“SNLIDA”).

III. Text

The following assumptions shall be made on the valuation date for purposes of determining the future nonforfeiture interest rate when this rate is not known in advance. For purposes of (B) below, “NI” shall refer to the nonforfeiture interest rate, “VI” shall refer to the valuation interest rate, and “CNI” shall refer to the current nonforfeiture interest rate which will be adjusted for any future durations pursuant to “A” below.

- A. For the period of time during which the additional EIA offset is not known, the additional offset shall be zero.
- B. For the period of time during which the nonforfeiture interest rate is not known,
$$NI = \min [\max \{VI, CNI\}, 3\%]$$

If the redetermination of the nonforfeiture interest rate is based on changes to the value of the underlying index (this will be the five-year Constant Maturity Treasury Rate in the case of the nonforfeiture interest rate), then for purposes of this Guideline it shall be assumed that such rate is not known as of the first date on which the rate may be subject to redetermination.

IV. Applicability

This Guideline is effective December 31, 2006 and affects all contracts issued on or after January 1, 1981.

Actuarial Guideline XLII

THE APPLICATION OF THE MODEL REGULATION PERMITTING THE RECOGNITION OF PREFERRED MORTALITY TABLES FOR USE IN DETERMINING MINIMUM RESERVE LIABILITIES

1. Purpose

The purpose of this Guideline is to provide rules and guidance in the selection of the proper set of mortality rates when a company chooses to use either the 2001 CSO Preferred Class Structure Mortality Table or the 2017 CSO Preferred Class Structure Mortality Table as authorized under a state's requirements.

2. Effective Date and Scope

The 2001 CSO Preferred Class Structure Mortality Table is available for valuation purposes for individual life policy forms (and certain group life products sold to individuals by certificate with premium rates guaranteed from issue for at least two years) for issues as provided by the state's requirements which may be based on the NAIC *Model Regulation Permitting The Recognition of Preferred Mortality Tables for Use in Determining Minimum Reserve Liabilities* (Model #815) and which may use the NAIC *Valuation Manual*.

The 2017 CSO Preferred Class Structure Mortality Table is available for valuation purposes for individual life policy forms (and certain group life products sold to individuals by certificate with premium rates guaranteed from issue for at least two years), for issues as provided by a state's requirements which may use the NAIC *Valuation Manual*.

The applicable CSO Preferred Class Structure Mortality Table is either the 2001 CSO Preferred Class Structure Mortality Table or the 2017 CSO Preferred Class Structure Mortality Table as applicable in context.

3. Definitions

- A. "Anticipated mortality" means the appointed actuary's assumption about the mortality to be experienced in the future on a group of insured lives.
- B. "Appointed actuary" means any individual who is appointed or retained in accordance with the requirements set forth in the Actuarial Opinion and Memorandum Regulation.
- C. "Basic reserves" means reserves calculated in accordance with Section 5 of the Standard Valuation Law.
- D. "Class" means a group of policies under one or more plans of insurance that has similar anticipated mortality, as grouped together by the insurer.
- E. "Credibility" means a measure of the predictive value in a given application that the appointed actuary attaches to a particular body of data (predictive is used here in the statistical sense and not in the sense of predicting the future).
- F. "Deficiency reserves" means the excess over basic reserves, if any, of minimum reserves established in accordance with Section 8 of the Standard Valuation Law.
- G. "Full credibility" means the level at which a particular body of data is assigned full predictive value based on a selected confidence interval.

- H. “Preferred class certification” means the certification required by Section 5 of the Model.
- I. “Underwriting-based justification” means the incorporation of underwriting criteria for use in setting the anticipated mortality assumption.
- J. “Underwriting class” means the insurer’s designation of insureds into a particular premium rate structure, e.g. super preferred, preferred, or standard

4. Selection of Table within the Applicable CSO Preferred Class Structure Mortality Table

VM-20, Section 3C of the *Valuation Manual* contains the requirements governing the set of mortality rates to be used for the purpose of calculating reserves based on the applicable CSO Preferred Class Structure Mortality Table. The election of the applicable CSO Preferred Class Structure Mortality Table is on a policy form and calendar year of issue basis, although once a calendar year cohort of policy forms is placed on the applicable CSO Preferred Class Mortality Structure Table basis, it may not subsequently revert back to the standard applicable CSO basis without the approval of the commissioner. This would be considered a basis change for annual statement reporting purposes. For those calendar years of issue in which a company opts to use the applicable CSO Preferred Class Structure Mortality Table, it must use the entire applicable CSO Preferred Class Structure Mortality Table for the chosen policy forms, i.e. a company may not use the preferred classes from the applicable CSO Preferred Class Structure Mortality Table and use the applicable Standard CSO Mortality Table for the non-preferred class(es). Additionally, if the company sells two similar policy forms in the same market the appointed actuary must use the same version of the table for both forms and may not use the applicable CSO Preferred Class Structure Mortality Table on one and the applicable Standard CSO Mortality Table on the other. A characteristic of this two-form scenario is that preferred lives would be attracted to one form and non-preferred lives would be attracted to the other.

The Model contains a requirement that at the time of election and annually thereafter, except for business valued under the applicable Residual Standard Nonsmoker Table or the applicable Residual Standard Smoker Table, the appointed actuary shall certify that the following tests of sufficiency were passed:

- a. For each class, the present value of death benefits over the next ten years after the valuation date using the anticipated mortality experience without recognition of mortality improvement beyond the valuation date for each class is less than the present value of death benefits using the valuation basic table corresponding to the valuation table being used for that class.
- b. For each class, the present value of death benefits over the future life of the contracts using anticipated mortality experience without recognition of mortality improvement beyond the valuation date for each class is less than the present value of death benefits using the valuation basic table corresponding to the valuation table being used for that class.

In the event that the class does not contain any policies with expiry dates ten or more years into the future, the sufficiency test based on the present value over the future life of the contracts shall be the only test required.

In order to choose the proper set of mortality rates within the applicable CSO Preferred Class Structure Mortality Table and to develop the preferred class certification, the following considerations shall be made:

A. Creation of Classes

The appointed actuary should consider the composition and characteristics of the policies issued under a plan of insurance in determining the appropriate classes that will be applicable under that plan. The policies that comprise classes generally have similar underwriting or mortality experience characteristics. When classes are similar across various plans of insurance, these classes may be combined into a single aggregate class. The appointed actuary shall not combine classes that are expected to have dissimilar anticipated mortality as a means to produce reserves that are materially lower than those developed if the classes were not combined.

The appointed actuary should consider the presence of reinsurance in creating classes. Anticipated mortality should be assessed and classes should be created on a gross basis. To the extent that anticipated mortality on reinsurance ceded or assumed is materially different from that on direct business, the appointed actuary should consider creating separate classes to properly reflect the anticipated mortality.

If, due to differences in actual experience by policy form and underwriting class, groupings of classes are changed from those used in the prior actuarial certifications, the change and the effect of the change shall be disclosed to the commissioner in the actuarial certification.

Separate classes may be established for a single policy form if there are significant anticipated mortality differences for different cohorts of insured lives, such as age groups or policy sizes. For instance, if a company has different underwriting thresholds for policies with face amounts of \$1 million or more, it may be appropriate to have a class for policies with face amounts of less than \$1 million and a separate class for policies of \$1 million or more.

B. Deriving Anticipated Mortality

- i. If relevant company experience for a particular class is available and has full credibility, the appointed actuary shall use that experience as the basis for deriving anticipated mortality.
- ii. In situations where relevant company experience for a particular class is available but does not have full credibility, the appointed actuary shall derive the anticipated mortality by blending the relevant company experience for the class with actual relevant, credible experience and past trends in experience of other similar types of business, either in the same company, in other companies (including reinsurance companies), or from other sources, generally in that order of preference provided that the appointed actuary supplies underwriting-based justification. The blending process shall be based on a credibility methodology that is recognized by the actuarial profession as acceptable practice as provided for in published transactions and scientific journals.
- iii. In situations where relevant company experience for a particular class is not available (e.g. a new product), the appointed actuary may derive the anticipated mortality using actual relevant credible experience and past trends in experience of other similar types of business either in the same company, in other companies (including reinsurance companies), or from other sources, generally in that order

of preference, provided that the appointed actuary supplies underwriting-based justification.

- iv. Underwriting-based justification shall include an analysis of the relationship between the underwriting-based criteria for the class where no experience data is available or does not have full credibility and the underwriting-based criteria that underlie the actual relevant credible experience data.
- v. If no sufficient underwriting-based or experienced-based justification is made to derive anticipated mortality for a class, the company shall not use the applicable CSO Preferred Class Structure Mortality Table for valuation.

C. Periodic Assessment of Anticipated Mortality

The appointed actuary shall annually review relevant emerging experience and underwriting methods for the purpose of assessing the appropriateness of anticipated mortality for each class and, in aggregate, for all classes combined. If the results of statistical or other testing indicate that previously anticipated mortality for a given class is inappropriate, then the appointed actuary shall set a new anticipated mortality assumption for the class. After analyzing the appropriateness of the anticipated mortality for each class, the appointed actuary shall analyze the appropriateness of the anticipated mortality assumptions at the aggregate level. If the analysis at the aggregate level indicates that aggregate anticipated mortality is inadequate, then the appointed actuary shall adjust the anticipated mortality assumption for one or more of the classes until the appointed actuary is satisfied that the anticipated mortality assumptions are adequate at the aggregate level.

D. Tests of Sufficiency

After the anticipated mortality is established, each class must be tested for sufficiency. If a class fails any required sufficiency test, the class must be re-valued using a different set of mortality rates from the applicable CSO Preferred Class Structure Mortality Table. A company must choose a set of mortality rates under which all required tests of sufficiency can be passed.

E. Calculation of Present Value

When a class is tested for sufficiency, the calculation of the present value of death benefits shall be based on a projection of death benefits, without the effect of lapse, at the valuation interest rate used to determine basic reserves for the class. If the class contains policies with several valuation interest rates, the lowest valuation interest rate used to determine the base reserves for any policy within the class shall be used for that class.

F. Right of Commissioner to Change the Table Used by the Company

The commissioner may require a company to change the mortality table if it is determined by the commissioner that inadequate justification of anticipated mortality is provided by the company.

5. Communications and Disclosures

The appointed actuary shall provide to the commissioner an annual certification that, as of the valuation date, the anticipated mortality experience of each class of business (other than Residual Standard Class) meets the criteria of 4(a) and 4(b) above. Additionally, the appointed actuary shall prepare an annual report in support of the certification. The report shall include the following items:

- A. The certification that the report supports;
- B. The specified plans of insurance for which the company has elected to use the Preferred Class Structure Table, briefly describing each plan and the amount of in force business (count, face amount, and reserves) on each plan on the valuation date;
- C. Compliance with the certification criteria;
- D. Description of sources of information used as a basis for determining anticipated mortality;
- E. Analysis performed to evaluate the credibility of relevant historical company experience when establishing anticipated mortality for each class;
- F. Analysis performed to evaluate the relationship between the underwriting-based criteria and the anticipated mortality established in each class.
- G. Statistical or other quantitative analyses performed in assessing the continued appropriateness of the anticipated mortality assumption for each class and for all classes in aggregate, and a summary of changes made as a result of the analyses;
- H. Anticipated Mortality, without recognition of mortality improvement beyond the date of valuation, for each class and for all classes in aggregate;
- I. For each class, the ratio of Anticipated Mortality to the mortality rates in the Valuation Basic Table corresponding to the set of valuation mortality rates being used for that class;
- J. Any changes made in the approach or parameters applied to the statistical analyses or tests performed compared to those performed at the last annual valuation; and,
- K. Disclosure of the financial impact of any change in the chosen set of valuation mortality rates

Drafting Note: Annual actuarial opinions, certifications and reports for the use of “X” factors have been required since the implementation of the NAIC *Valuation of Life Insurance Model Regulation*. The work and analysis to be performed for Preferred Class Certification is very similar to the requirements for the use of the “X” factors and the appointed actuary may combine the selection and analysis of “X” factors and the selection and analysis of applicable CSO Preferred Class Structure Mortality Table into one actuarial opinion, certification and annual experience report, if the appointed actuary wishes to do so.

6. Other Items of Note

- A. If a class of business is assigned to a different set of mortality rates within the applicable CSO Preferred Class Structure Mortality Table (either a higher or lower level of mortality rates) from that used in the prior valuation, the change is not considered a basis change, and the reserve change must be accounted for in the calculation of gain from operations.
- B. Multiple underwriting classes on a policy form can be mapped into the same set of mortality rates within the applicable CSO Preferred Class Structure Mortality Table, if, in aggregate, the underwriting classes can be shown to have anticipated mortality no greater than the valuation basic table underlying the set of mortality rates selected.
- C. If a company chooses to use the applicable CSO Preferred Class Structure Mortality Table for basic reserves, the same table must be the basis for the calculation of deficiency reserves, if applicable.

Not for Distribution

Actuarial Guideline XLIII

CARVM FOR VARIABLE ANNUITIES

Appendix 11	1994 Variable Annuity MGDB Mortality Table

Section I) Background

The purpose of this Actuarial Guideline (Guideline) is to interpret the standards for the valuation of reserves for variable annuity and other contracts involving certain guaranteed benefits similar to those offered with variable annuities. The Guideline codifies the basic interpretation of the Commissioners Annuity Reserve Valuation Method (CARVM) by clarifying the assumptions and methodologies that will comply with the intent of the Standard Valuation Law (SVL). It also applies similar assumptions and methodologies to contracts that contain characteristics similar to those described in the scope, but that are not directly subject to CARVM.

For many years regulators and the industry have struggled with the issue of applying a uniform reserve standard to these contracts and in particular some of the guaranteed benefits referenced above. Current approaches make assumptions about product design, contractholder behavior and economic relationships and conditions. The economic volatility seen over the last few decades, combined with an increase in the complexity of these products, have made attempts to use these approaches for measuring economic-related risk less successful.

The Guideline addresses these issues by including an approach that applies principles of asset adequacy analysis directly to the risks associated with these products and guarantees.

The NAIC is currently using a similar approach to calculate risk-based capital (RBC) for similar contracts (i.e., the C-3 Phase II project). The methodology in the Guideline is based on that approach, and the intent of the Guideline is to, where possible, facilitate a framework whereby companies may determine both reserve and RBC in a consistent calculation.

In developing the Guideline, two regulatory sources were looked to for guidance. First, the SVL requires that CARVM be based on the greatest present value of future guaranteed benefits. Second, the NAIC Model Variable Annuity Regulation (VAR) states that the “reserve liability for variable annuities shall be established pursuant to the requirements of the Standard Valuation Law in accordance with actuarial procedures that recognize the variable nature of the benefits provided and any mortality guarantees.”

The Guideline requires that reserves for contracts falling within its scope be based on a minimum floor determined using a standard scenario (referred to as the Standard Scenario Amount) plus the excess over this minimum floor, if any, of a reserve calculated using a projection of the assets and estimated liabilities supporting these contracts over a broad range of stochastically generated projection scenarios and using prudent estimate assumptions (referred to as the Conditional Tail Expectation Amount). Within each of these scenarios, the greatest of the present values of accumulated losses ignoring Federal Income Tax is determined. The assumed fund performance for these scenarios must meet the mandated calibration standards contained in the Guideline. The reserve calculated using projections is based on a Conditional Tail Expectation measure of the results for each scenario.

Conditional Tail Expectation (CTE) is a statistical risk measure that provides enhanced information about the tail of a distribution above that provided by the traditional use of percentiles. Instead of only identifying a value at a particular percentile and thus ignoring the possibility of extremely large values in the tail, CTE recognizes a portion of the tail by providing the average over all values in the tail beyond the CTE percentile. Thus where the tail of the distribution of losses approximates that of a standard normal distribution, CTE (70) will approximate the 88th percentile; where the tail is “fatter” than that of a standard normal distribution, CTE (70) will exceed the 88th percentile; and where the tail is not as “fat” as a standard normal distribution, CTE (70) will be lower than the 88th percentile. Therefore, for distributions with “fat tails” from low probability, high impact events, such as those covered by the Guideline, the use of CTE will provide a more revealing measure than use of a single percentile requirement.

For certain products (e.g., variable annuities with Guaranteed Minimum Death Benefits only), a company can use an Alternative Methodology in place of the modeling approach outlined above to determine the Conditional Tail Expectation Amount.

The projection methodology used to calculate the Conditional Tail Expectation Amount, as well as the approach used to develop the Alternative Methodology, is based on the following set of principles. These principles should be followed when applying the methodology in the Guideline and analyzing the resulting reserves.¹

Principle 1. The objective of the approach used to determine the Conditional Tail Expectation Amount is to quantify the amount of statutory reserves needed by the company to be able to meet contractual obligations in light of the risks to which the company is exposed.

Principle 2. The calculation of the Conditional Tail Expectation Amount is based on the results derived from an analysis of asset and liability cash flows produced by the application of a stochastic cash flow model to equity return and interest rate scenarios. For each scenario the greatest present value of accumulated surplus deficiency is calculated. The analysis reflects Prudent Estimate (see the definition of Prudent Estimate in Section III) assumptions for deterministic variables and is performed in aggregate (subject to limitations related to contractual provisions)² to allow the natural offset of risks within a given scenario. The methodology utilizes a projected total statutory balance sheet approach by including all projected income, benefit and expense items related to the business in the model and sets the Conditional Tail Expectation Amount at a degree of confidence using the conditional tail expectation measure applied to the set

¹ Note the following when considering these principles:

- a. The principles should be considered in their entirety.
- b. The Guideline requires companies to meet these principles with respect to only those contracts that fall within the scope of the Guideline and are in force as of the valuation date to which the requirements are applied.

² Examples where full aggregation between contracts may not be possible include experience rated group contracts and the operation of reinsurance treaties.

of scenario specific greatest present values of accumulated statutory deficiencies that is deemed to be reasonably conservative over the span of economic cycles.

Principle 3. The implementation of a model involves decisions about the experience assumptions and the modeling techniques to be used in measuring the risks to which the company is exposed. Generally, assumptions are to be based on the conservative end of the actuary's confidence interval. The choice of a conservative estimate for each assumption may result in a distorted measure of the total risk. Conceptually,³ the choice of assumptions and the modeling decisions should be made so that the final result approximates what would be obtained for the Conditional Tail Expectation Amount at the required CTE level if it were possible to calculate results over the joint distribution of all future outcomes. In applying this concept to the actual calculation of the Conditional Tail Expectation Amount, the actuary should be guided by evolving practice and expanding knowledge base in the measurement and management of risk.

Principle 4. While a stochastic cash flow model attempts to include all real world risks relevant to the objective of the stochastic cash flow model and relationships among the risks, it will still contain limitations because it is only a model. The calculation of the Conditional Tail Expectation Amount is based on the results derived from the application of the stochastic cash flow model to scenarios while the actual statutory reserve needs of the company arise from the risks to which the company is (or will be) exposed in reality. Any disconnect between the model and reality should be reflected in setting Prudent Estimate assumptions to the extent not addressed by other means.

Principle 5. Neither a cash flow scenario model, nor a method based on factors calibrated to the results of a cash flow scenario model, can completely quantify a company's exposure to risk. A model attempts to represent reality, but will always remain an approximation thereto and hence uncertainty in future experience is an important consideration when determining the Conditional Tail Expectation Amount. Therefore, the use of assumptions, methods, models, risk management strategies (e.g., hedging), derivative instruments, structured investments or any other risk transfer arrangements (such as reinsurance) that serve solely to reduce the calculated Conditional Tail Expectation Amount without also reducing risk on scenarios similar to those used in the actual cash flow modeling are inconsistent with these principles. The use of assumptions and risk management strategies should be appropriate to the business and not merely constructed to exploit 'foreknowledge' of the components of the required methodology.

The methodology prescribed in the Guideline is applied to a company's entire portfolio of variable annuities (whether or not they contain guaranteed benefits), as well as other affected products that contain guaranteed benefits. Current guaranteed benefits include Guaranteed Minimum Death Benefits, Guaranteed Minimum Accumulation Benefits, Guaranteed Minimum Income Benefits, Guaranteed Minimum Withdrawal Benefits, Guaranteed Lifetime Withdrawal Benefits, and Guaranteed Payout Annuity Floors. It is also expected that the methodology in the Guideline will be applied to future variations on these designs and to new guarantee designs.

Since statutory reporting requires companies to report reserves prior to reinsurance, the Guideline clarifies standards for adjusting the various components of the reserve so that the reserve may be reported both prior to and net of reinsurance.

The Guideline also requires an allocation of the total reported reserve between the General and Separate Accounts and prescribes a method for doing this allocation.

³ The intent of Principle 3 is to describe the conceptual framework for setting assumptions. Appendix 9 provides the requirements and guidance for setting contractholder behavior and includes alternatives to this framework if the actuary is unable to fully apply this principle.

Actuarial certification of the work done to calculate reserves is required by the Guideline. A qualified actuary (referred to throughout the Guideline as “the actuary”) shall certify that the work has been done in a way that meets all applicable Actuarial Standards of Practice.

For more details on the development of these requirements, including the development of the calibration criteria, see the American Academy of Actuaries recommendation on C-3 Phase II risk-based capital.

This Guideline and its Appendices require the actuary to make various determinations, verifications and certifications. The company shall provide the actuary with the necessary information sufficient to permit the actuary to fulfill the responsibilities set forth in this Guideline and its Appendices and responsibilities arising from applicable Actuarial Standards of Practice, including ASOP No. 23, *Data Quality*.

The risks reflected in the calculation of reserves under this Guideline arise from actual or potential events or activities which are both:

- a) Directly related to the contracts falling under the scope of this Guideline or their supporting assets; and
- b) Capable of materially affecting the reserve.

Categories and examples of risks reflected in the reserve calculations include but are not necessarily limited to:

- a) Asset Risks
 - (i) Separate Account fund performance;
 - (ii) Credit risks (e.g., default or rating downgrades);
 - (iii) Commercial mortgage loan rollover rates (roll-over of bullet loans);
 - (iv) Uncertainty in the timing or duration of asset cash flows (e.g., shortening (prepayment risk) and lengthening (extension risk));
 - (v) Performance of equities, real estate, and Schedule BA assets;
 - (vi) Call risk on callable assets;
 - (vii) Risk associated with hedge instrument (includes basis, gap, price, parameter estimation risks, and variation in assumptions); and
 - (viii) Currency risk.
- b) Liability Risks
 - (i) Reinsurer default, impairment or rating downgrade known to have occurred before or on the valuation date;
 - (ii) Mortality/longevity, persistency/lapse, partial withdrawal and premium payment risks;
 - (iii) Utilization risk associated with guaranteed living benefits;
 - (iv) Anticipated mortality trends based on observed patterns of mortality improvement or deterioration, where permitted;
 - (v) Annuitization risks; and
 - (vi) Additional premium dump-ins (high interest rate guarantees in low interest rate environments);
- c) Combination Risks
 - (i) Risks modeled in the company’s risk assessment processes that are related to the contracts, as described above;
 - (ii) Disintermediation risk (including such risk related to payment of surrender or partial withdrawal benefits); and
 - (iii) Risks associated with Revenue Sharing Income.

The risks not necessarily reflected in the calculation of reserves under this Guideline are:

- a) Those not reflected in the determination of Risk-Based Capital; and

- b) Those reflected in the determination of Risk-Based Capital but arising from obligations of the company not directly related to the contracts falling under the scope of this Guideline, or their supporting assets, as described above.

Categories and examples of risks not reflected in the reserve calculations include but are not necessarily limited to:

- a) Asset Risks
 - Liquidity risks associated with a “run on the bank.”
- b) Liability Risks
 - (i) Reinsurer default, impairment or rating downgrade occurring after the valuation date;
 - (ii) Catastrophic events (e.g., epidemics or terrorist events);
 - (iii) Major breakthroughs in life extension technology that have not yet fundamentally altered recently observed mortality experience; and
 - (iv) Significant future reserve increases as an unfavorable scenario is realized.
- c) General Business Risks
 - (i) Deterioration of reputation;
 - (ii) Future changes in anticipated experience (reparameterization in the case of stochastic processes) which would be triggered if and when adverse modeled outcomes were to actually occur;
 - (iii) Poor management performance;
 - (iv) The expense risks associated with fluctuating amounts of new business;
 - (v) Risks associated with future economic viability of the company;
 - (vi) Moral hazards; and
 - (vii) Fraud and theft.

Section II) Scope

- A) The Guideline applies to contracts, whether directly written or assumed through reinsurance, falling into any of the following categories:
 - 1) Variable deferred annuity contracts subject to the Commissioner’s Annuity Reserve Valuation Method (CARVM), whether or not such contracts contain Guaranteed Minimum Death Benefits (GMDBs), or Variable Annuity Guaranteed Living Benefits (VAGLBs);
 - 2) Variable immediate annuity contracts, whether or not such contracts contain GMDBs or VAGLBs;
 - 3) Group annuity contracts that are not subject to CARVM, but contain guarantees similar in nature⁴ to GMDBs, VAGLBs, or any combination thereof; and
 - 4) All other products that contain guarantees similar in nature to GMDBs or VAGLBs, even if the insurer does not offer the mutual funds or variable funds to which these guarantees relate, where there is no other explicit reserve requirement.⁵

⁴ The term “similar in nature,” as used in sections II(A)3) and II(A)4) is intended to capture both current products and benefits as well as product and benefit designs that may emerge in the future. Examples of the currently known designs are listed in footnote #5 below. Any product or benefit design that does not clearly fit the Scope should be evaluated on a case-by-case basis taking into consideration factors that include, but are not limited to, the nature of the guarantees, the definitions of GMDB and VAGLB in sections III(A)1) and III(A)2) and whether the contractual amounts paid in the absence of the guarantee are based on the investment performance of a market-value fund or market-value index (whether or not part of the company’s separate account).

⁵ For example, a group life contract that wraps a GMDB around a mutual fund would generally fall under the scope of the Guideline since there is not an explicit reserve requirement for this type of group life contract. However, for an individual

If such a benefit is offered as part of a contract that has an explicit reserve requirement and that benefit does not currently have an explicit reserve requirement:

- a) The Guideline shall be applied to the benefit on a standalone basis (i.e., for purposes of the reserve calculation, the benefit shall be treated as a separate contract);
 - b) The reserve for the underlying contract is determined according to the explicit reserve requirement; and
 - c) The reserve held for the contract shall be the sum of a) and b).
- B) The Guideline does not apply to contracts falling under the scope of the NAIC Model Modified Guaranteed Annuity Regulation (MGAs); however, it does apply to contracts listed above that include one or more subaccounts containing features similar in nature to those contained in MGAs (e.g., market value adjustments).
- C) Separate account products that guarantee an index and do not offer GMDBs or VAGLBs are excluded from the scope of the Guideline.

Section III) Definitions

A) Definitions of Benefit Guarantees

- 1) Guaranteed Minimum Death Benefit (GMDB). A GMDB is a guaranteed benefit providing, or resulting in the provision that, an amount payable on the death of a contractholder, annuitant, participant, or insured will be increased and/or will be at least a minimum amount. Only such guarantees having the potential to produce a contractual total amount payable on death that exceeds the account value, or in the case of an annuity providing income payments, an amount payable on death other than continuation of any guaranteed income payments, are included in this definition. GMDBs that are based on a portion of the excess of the account value over the net of premiums paid less partial withdrawals made (e.g., an Earnings Enhanced Death Benefit) are also included in this definition.
- 2) Variable Annuity Guaranteed Living Benefit (VAGLB). A VAGLB is a guaranteed benefit providing, or resulting in the provision that, one or more guaranteed benefit amounts payable or accruing to a living contractholder or living annuitant, under contractually specified conditions (e.g., at the end of a specified waiting period, upon annuitization, or upon withdrawal of premium over a period of time), will increase contractual benefits should the contract value referenced by the guarantee (e.g., account value) fall below a given level or fail to achieve certain performance levels. Only such guarantees having the potential to provide benefits with a present value as of the benefit commencement date that exceeds the contract value referenced by the guarantee are included in this definition. Payout annuities without minimum payout or performance guarantees are neither considered to contain nor to be VAGLBs.
- 3) Guaranteed Minimum Income Benefit (GMIB). A GMIB is a VAGLB design for which the benefit is contingent on annuitization of a variable deferred annuity or similar contract. The benefit is typically expressed as a contractholder option, on one or more option dates, to have a minimum amount applied to provide periodic income using a specified purchase basis.

variable life contract with a GMDB and a benefit similar in nature to a VAGLB, the Guideline would generally apply only to the VAGLB-type benefit, since there is an explicit reserve requirement that applies to the variable life contract and the GMDB.

- 4) Guaranteed Payout Annuity Floor (GPAF). A GPAF is a VAGLB design guaranteeing that one or more of the periodic payments under a variable immediate annuity will not be less than a minimum amount.

B) Definitions of Reserve Methodology Terminology

- 1) Scenario. A scenario consists of a set of asset growth rates and investment returns from which assets and liabilities supporting a set of contracts may be determined for each year of a projection.
- 2) Cash Surrender Value. For purposes of the Guideline, the Cash Surrender Value for a contract is the amount available to the contractholder upon surrender of the contract. Generally, it is equal to the account value less any applicable surrender charges, where the surrender charge reflects the availability of any free partial surrender options. For contracts where all or a portion of the amount available to the contractholder upon surrender is subject to a market value adjustment, however, the Cash Surrender Value shall reflect the market value adjustment consistent with the required treatment of the underlying assets. That is, the Cash Surrender Value shall reflect any market value adjustments where the underlying assets are reported at market value, but shall not reflect any market value adjustments where the underlying assets are reported at book value.
- 3) Scenario Greatest Present Value. For a given scenario, the Scenario Greatest Present Value is the sum of:
 - a) The greatest of the present values, as of the projection start date, of the projected Accumulated Deficiencies for the scenario; and
 - b) The Starting Asset Amount, as defined below.
- 4) Conditional Tail Expectation Amount. The Conditional Tail Expectation Amount is equal to the numerical average of the 30 percent largest values of the Scenario Greatest Present Values.
- 5) Working Reserve. The Working Reserve is the assumed reserve used in the projections of Accumulated Deficiencies supporting the calculation of the Scenario Greatest Present Values. At any point in the projections, including at the start of the projection, the Working Reserve shall equal the projected Cash Surrender Value.

For a variable payout annuity without a Cash Surrender Value, the Working Reserve shall equal the present value, at the valuation interest rate and the valuation mortality table specified for such a product by the Standard Valuation Law of future income payments projected using a return based on the valuation interest rate less appropriate asset based charges. For annuitizations that occur during the projection, the valuation interest rate as of the current valuation date may be used in determining the Working Reserve. Alternatively, if an integrated model of equity returns and interest rates is used, a future estimate of valuation interest rates may be incorporated into the Working Reserve.

For contracts not covered above, the actuary shall determine the Working Reserve in a manner that is consistent with the above requirements.

- 6) Accumulated Deficiency. Accumulated Deficiency is an amount measured as of the end of a projection year and equals the projected Working Reserve less the amount of

projected assets, both as of the end of the projection year. Accumulated Deficiencies may be positive or negative.⁶

- 7) Starting Asset Amount. The Starting Asset Amount equals the value of the assets at the start of the projection, as defined in section A1.4)A) of Appendix 1.
- 8) Prudent Estimate. The deterministic assumptions to be used for projections are to be the actuary's Prudent Estimate. This means that they are to be set at the conservative end of the actuary's confidence interval as to the true underlying probabilities for the parameter(s) in question, based on the availability of relevant experience and its degree of credibility.

A Prudent Estimate assumption is developed by applying a margin for uncertainty to the "Anticipated Experience" assumption. The margin for uncertainty shall provide for estimation error and margins for adverse deviation. The resulting Prudent Estimate assumption shall be reasonably conservative over the span of economic cycles and over a plausible range of expected experience, in recognition of the Principles described in Section I. "Anticipated Experience" would typically be the actuary's reasonable estimate of future experience for a risk factor given all available, relevant information pertaining to the contingencies being valued. Recognizing that assumptions are simply assertions of future unknown experience, the margin should be directly related to uncertainty in the underlying risk factor. The greater the uncertainty, the larger the margin. Each margin should serve to increase the Aggregate Reserve that would otherwise be held in its absence (i.e., using only the Anticipated Experience assumption).

For example, assumptions for circumstances that have never been observed require more margins for error than those for which abundant and relevant experience data are available.

This means that valuation assumptions not stochastically modeled are to be consistent with the stated Principles in Section I, be based on any relevant and credible experience that is available, and should be set to produce, in concert with other Prudent Estimate assumptions, a Conditional Tail Expectation Amount that is consistent with the stated CTE level.

The actuary shall follow the principles discussed in Appendices 9 and 10 in determining Prudent Estimate assumptions.

- 9) Gross Wealth Ratio. The Gross Wealth Ratio is the cumulative return for the indicated time period and percentile (e.g., 1.0 indicates that the index is at its original level).
- 10) Clearly Defined Hedging Strategy. The designation of Clearly Defined Hedging Strategy applies to strategies undertaken by a company to manage risks through the future purchase or sale of hedging instruments and the opening and closing of hedging positions. In order to qualify as a Clearly Defined Hedging Strategy, the strategy must meet the principles outlined in the Background section of the Guideline (particularly Principle 5) and shall, at a minimum, identify:
 - a) The specific risks being hedged (e.g., delta, rho, vega, etc.),
 - b) The hedge objectives,

⁶ Note that a positive Accumulated Deficiency means that there is a cumulative loss and a negative Accumulated Deficiency means that there is a cumulative gain.

- c) The risks not being hedged (e.g., variation from expected mortality, withdrawal, and other utilization or decrement rates assumed in the hedging strategy, etc.),
- d) The financial instruments that will be used to hedge the risks,
- e) The hedge trading rules including the permitted tolerances from hedging objectives,
- f) The metric(s) for measuring hedging effectiveness,
- g) The criteria that will be used to measure effectiveness,
- h) The frequency of measuring hedging effectiveness,
- i) The conditions under which hedging will not take place, and
- j) The person or persons responsible for implementing the hedging strategy.

The hedge strategy may be dynamic, static, or a combination thereof.

It is important to note that strategies involving the offsetting of the risks associated with variable annuity guarantees with other products outside of the scope of the Guideline (e.g., equity-indexed annuities) do not currently qualify as a Clearly Defined Hedging Strategy under the Guideline.

- 11) Revenue Sharing. Revenue Sharing, for purposes of the Guideline, means any arrangement or understanding by which an entity responsible for providing investment or other types of services makes payments to the company (or to one of its affiliates). Such payments are typically in exchange for administrative services provided by the company (or its affiliate), such as marketing, distribution and recordkeeping. Only payments that are attributable to charges or fees taken from the underlying variable funds or mutual funds supporting the contracts that fall under the scope of the Guideline shall be included in the definition of Revenue Sharing.
- 12) Domiciliary Commissioner. For purposes of the Guideline, this term refers to the chief insurance regulatory official of the state of domicile of the company.
- 13) Aggregate Reserve. The minimum reserve requirement as of the valuation date for the contracts falling within the scope of the Guideline.
- 14) 1994 Variable Annuity MGDB Mortality Table. This mortality table is shown in Appendix 11.

Section IV) Definition of General Reserve Methodology

- A) General Description. The Aggregate Reserve for contracts falling within the scope of the Guideline shall equal the Conditional Tail Expectation Amount but not less than the Standard Scenario Amount, where the Aggregate Reserve is calculated as the Standard Scenario Amount plus the excess, if any, of the Conditional Tail Expectation Amount over the Standard Scenario Amount.
- B) Impact of Reinsurance Ceded. Where reinsurance is ceded for all or a portion of the contracts, both components in the above general description (and thus the Aggregate Reserve) shall be determined net of any reinsurance treaties that meet the statutory requirements that would allow the treaty to be accounted for as reinsurance.

An Aggregate Reserve before reinsurance shall also be calculated if needed for regulatory reporting or other purposes, using methods described in Appendix 2.

- C) The Standard Scenario Amount. The Standard Scenario Amount is the aggregate of the reserves determined by applying the Standard Scenario method to each of the contracts falling within the scope of the Guideline. The Standard Scenario method is outlined in Appendix 3.
- D) The Conditional Tail Expectation Amount. The Conditional Tail Expectation Amount shall be determined based on a projection of the contracts falling within the scope of the Guideline, and the assets supporting these contracts, over a broad range of stochastically generated projection scenarios and using Prudent Estimate assumptions.

The stochastically generated projection scenarios shall meet the Scenario Calibration Criteria described in Appendix 5.

The Conditional Tail Expectation Amount may be determined in aggregate for all contracts falling within the scope of the Guideline (i.e., a single grouping). At the option of the company, it may be determined by applying the methodology outlined below to sub-groupings of contracts, in which case, the Conditional Tail Expectation Amount shall equal the sum of the amounts computed for each such sub-grouping.

The Conditional Tail Expectation Amount shall be determined using the following steps:

- 1) For each scenario, projected aggregate Accumulated Deficiencies are determined at the start of the projection (i.e., “time 0”) and at the end of each projection year as the sum of the Accumulated Deficiencies for each contract grouping.
- 2) The Scenario Greatest Present Value is determined for each scenario based on the sum of the aggregate Accumulated Deficiencies⁷ and aggregate Starting Asset Amounts for the contracts for which the Aggregate Reserve is being computed.
- 3) The Scenario Greatest Present Values for all scenarios are then ranked from smallest to largest and the Conditional Tail Expectation Amount is the average of the largest 30 percent of these ranked values.

The projections shall be performed in accordance with Appendix 1. The actuary shall document the assumptions and procedures used for the projections and summarize the results obtained as described in Appendix 2 and Appendix 8.

- E) Alternative Methodology. For variable deferred annuity contracts that contain either no guaranteed benefits or only GMDBs (i.e., no VAGLBs), the Conditional Tail Expectation Amount may be determined using the Alternative Methodology described in Appendix 4 rather than using the approach described in subsection D) above. However, in the event the approach described in subsection D) has been used in prior valuations the Alternative Methodology may not be used without approval from the Domiciliary Commissioner.

The Conditional Tail Expectation Amount for the group of contracts to which the Alternative Methodology is applied shall not be less than the aggregate Cash Surrender Value of those contracts.

The actuary shall document the assumptions and procedures used for the Alternative Methodology and summarize the results obtained as described in Appendix 2 and Appendix 8.

⁷ The Scenario Greatest Present Value is therefore based on the greatest projected Accumulated Deficiency, in aggregate, for all contracts for which the Aggregate Reserve is computed hereunder, rather than based on the sum of the greatest projected Accumulated Deficiency for each grouping of contracts.

- F) Allocation of Results to Contracts. The Aggregate Reserve shall be allocated to the contracts falling within the scope of the Guideline using the method outlined in Appendix 6.
- G) Reserve as of January 1, 2009. The reserve as of January 1, 2009 shall be the sum of the reserves from the asset adequacy analysis requirements in Actuarial Guideline XXXIV and Actuarial Guideline XXXIX.

Section V) Effective Date

The Guideline affects all contracts issued on or after January 1, 1981, effective December 31, 2009. Where the application of the Guideline produces higher reserves than the company had otherwise established by their previously used interpretation, such company may request a grade-in period, not to exceed three (3) years, from the Domiciliary Commissioner upon satisfactory demonstration of the previous interpretation and that such delay of implementation will not cause a hazardous financial condition or potential harm to its policyholders. The grading shall be done only on the reserves on the contracts in-force as of December 31, 2009. The reserves under the old basis and new basis shall be compared each year - 2/3 of the difference shall be subtracted from the reserve under the new basis in 2009 and 1/3 of the difference shall be subtracted from the reserve under the new basis in 2010.

Not for Distribution

APPENDIX 1 - Determination of Conditional Tail Expectation Amount Based on Projections

A1.1) Projection of Accumulated Deficiencies

- A) General Description of Projection. The projection of Accumulated Deficiencies shall be made ignoring Federal Income Tax and reflect the dynamics of the expected cash flows for the entire group of contracts, reflecting all product features, including the guarantees provided under the contracts. Insurance company expenses (including overhead and investment expense), fund expenses, contractual fees and charges, revenue sharing income received by the company (net of applicable expenses) and cash flows associated with any reinsurance or hedging instruments are to be reflected on a basis consistent with the requirements herein. Cash flows from any fixed account options shall also be included. Any market value adjustment assessed on projected withdrawals or surrenders shall also be included (whether or not the Cash Surrender Value reflects market value adjustments). Throughout the projection, where estimates are used, such estimates shall be on a Prudent Estimate basis.

Federal Income Tax shall not be included in the projection of Accumulated Deficiencies.

- B) Grouping of Variable Funds and Subaccounts. The portion of the Starting Asset Amount held in the Separate Account represented by the variable funds and the corresponding account values may be grouped for modeling using an approach that recognizes the investment guidelines and objectives of the funds. In assigning each variable fund and the variable subaccounts to a grouping for projection purposes, the fundamental characteristics of the fund shall be reflected and the parameters shall have the appropriate relationship to the required calibration points of the S&P 500. The grouping shall reflect characteristics of the efficient frontier (i.e., returns generally cannot be increased without assuming additional risk).

An appropriate proxy for each variable subaccount shall be designed in order to develop the investment return paths. The development of the scenarios for the proxy funds is a fundamental step in the modeling and can have a significant impact on results. As such, the actuary must map each variable account to an appropriately crafted proxy fund normally expressed as a linear combination of recognized market indices (or sub-indices).

- C) Grouping of Contracts. Projections may be performed for each contract in force on the date of valuation or by grouping contracts into representative cells of model plans using all characteristics and criteria having a material impact on the size of the reserve. Grouping shall be the responsibility of the actuary but may not be done in a manner that intentionally understates the resulting reserve.
- D) Modeling of Hedges. The appropriate costs and benefits of hedging instruments that are currently held by the company in support of the contracts falling under the scope of the Guideline shall be included in the projections. If the company is following a Clearly Defined Hedging Strategy and the hedging strategy meets the requirements of Appendix 7, the projections shall take into account the appropriate costs and benefits of hedge positions expected to be held in the future through the execution of that strategy.

To the degree either the currently held hedge positions or the hedge positions expected to be held in the future introduce basis, gap, price, or assumption risk, a suitable reduction for effectiveness of hedges shall be made. The actuary is responsible for verifying compliance with a Clearly Defined Hedging Strategy and the requirements in Appendix 7 for all hedge instruments included in the projections.

While hedging strategies may change over time, any change in hedging strategy shall be documented and include an effective date of the change in strategy.

The use of products not falling under the scope of the Guideline (e.g., equity-indexed annuities) as a hedge shall not be recognized in the determination of Accumulated Deficiencies.

These requirements do not supersede any statutes, laws, or regulations of any state or jurisdiction related to the use of derivative instruments for hedging purposes and should not be used in determining whether a company is permitted to use such instruments in any state or jurisdiction.

Upon request of the company's domiciliary commissioner and for information purposes to show the effect of including future hedge positions in the projections, the company shall show the results of performing an additional set of projections reflecting only the hedges currently held by the company in support of the contracts falling under the scope of the Guideline. Because this additional set of projections excludes some or all of the derivative instruments, the investment strategy used may not be the same as that used in the determination of the Conditional Tail Expectation Amount.

E) Revenue Sharing.

- 1) Projections of Accumulated Deficiencies may include income from projected future Revenue Sharing, as defined in Section III) net of applicable projected expenses ("Net Revenue Sharing Income") if the following requirements are met:
 - a) The Net Revenue Sharing Income is received⁸ by the company,⁹
 - b) Signed contractual agreement or agreements are in place as of the valuation date and support the current payment of the Net Revenue Sharing Income; and
 - c) The Net Revenue Sharing Income is not already accounted for directly or indirectly as a company asset.

- 2) The amount of Net Revenue Sharing Income to be used shall reflect the actuary's assessment of factors that include but are not limited to the following (not all of these factors will necessarily be present in all situations):
 - a) The terms and limitations of the agreement(s), including anticipated revenue, associated expenses and any contingent payments incurred or made by either the company or the entity providing the Net Revenue Sharing as part of the agreement(s);
 - b) The relationship between the company and the entity providing the Net Revenue Sharing Income that might affect the likelihood of payment and the level of expenses;
 - c) The benefits and risks to both the company and the entity paying the Net Revenue Sharing Income of continuing the arrangement.

⁸ For purposes of this section, Net Revenue Sharing Income is considered to be received by the company if it is paid directly to the company through a contractual agreement with either the entity providing the Net Revenue Sharing Income or an affiliated company that receives the Net Revenue Sharing Income. Net Revenue Sharing Income would also be considered to be received, if it is paid to a subsidiary that is owned by the company and if 100% of the statutory income from that subsidiary is reported as statutory income of the company. In this case the actuary needs to assess the likelihood that future Net Revenue Sharing Income is reduced due to the reported statutory income of the subsidiary being less than future Net Revenue Sharing Income received.

⁹ As in other sections of the Guideline, the term "the company" is used exclusively as a reference to the insurance company writing the business falling under the scope of the Guideline. The term "entity providing the Net Revenue Sharing Income" is self-explanatory and is used consistently in this subsection.

- d) The likelihood that the company will collect the Net Revenue Sharing Income during the term(s) of the agreement(s) and the likelihood of continuing to receive future revenue after the agreement(s) has ended;
 - e) The ability of the company to replace the services provided to it by the entity providing the Net Revenue Sharing Income or to provide the services itself, along with the likelihood that the replaced or provided services will cost more to provide; and
 - f) The ability of the entity providing the Net Revenue Sharing Income to replace the services provided to it by the company or to provide the services itself, along with the likelihood that the replaced or provided services will cost more to provide.
- 3) The amount of projected Net Revenue Sharing Income shall also reflect a margin (which decreases the assumed Net Revenue Sharing Income) directly related to the uncertainty of the revenue. The greater the uncertainty, the larger the margin. Such uncertainty is driven by many factors including the potential for changes in the securities laws and regulations, mutual fund board responsibilities and actions, and industry trends. Since it is prudent to assume that uncertainty increases over time, a larger margin shall be applied as time that has elapsed in the projection increases.
 - 4) All expenses required or assumed to be incurred by the company in conjunction with the arrangement providing the Net Revenue Sharing Income, as well as any expenses assumed to be incurred by the company in conjunction with the assumed replacement of the services provided to it (as discussed in subsection 2)e) above) shall be included in the projections as a company expense under the requirements of section A1.1)A). In addition, expenses incurred by either the entity providing the Net Revenue Sharing Income or an affiliate of the company shall be included in the applicable expenses discussed in section A1.1)A) and A1.1)E)1) that reduce the Net Revenue Sharing Income.
 - 5) The actuary is responsible for reviewing the revenue sharing agreements, verifying compliance with these requirements, and documenting the rationale for any source of Net Revenue Sharing Income used in the projections.
 - 6) The amount of Net Revenue Sharing Income assumed in a given scenario shall not exceed the sum of a) and b), where:
 - a) Is the contractually guaranteed Net Revenue Sharing Income projected under the scenario, and
 - b) Is the actuary's estimate of non-contractually guaranteed Net Revenue Sharing Income before reflecting any margins for uncertainty multiplied by the following factors:
 - (i) 1.0 in the first projection year;
 - (ii) 0.9 in the second projection year;
 - (iii) 0.8 in the third projection year;
 - (iv) 0.7 in the fourth projection year;
 - (v) 0.6 in the fifth projection year;
 - (vi) 0.5 in the sixth and all subsequent projection years. The resulting amount of non-contractually guaranteed Net Revenue Sharing Income after application of this factor shall not exceed 0.25% per year on separate account assets in the sixth and all subsequent projection years.

- F) Length of Projections. Projections of Accumulated Deficiencies shall be run for as many future years as needed so that no materially greater reserve value would result from longer projection periods.
- G) AVR/IMR. The AVR and the IMR shall be handled consistently with the treatment in the company's cash flow testing.

A1.2) Determination of Scenario Greatest Present Values

- A) Scenario Greatest Present Values. For a given scenario, the Scenario Greatest Present Value is the sum of:
- 1) The greatest present value, as of the projection start date, of the projected Accumulated Deficiencies defined in Section III)B)6); and
 - 2) The Starting Asset Amount.
- B) Discount Rates. In determining the Scenario Greatest Present Values, Accumulated Deficiencies shall be discounted using the same interest rates at which positive cash flows are invested, as determined in section A1.4)D). Such interest rates shall be reduced to reflect expected credit losses. Note that the interest rates used do not include a reduction for Federal Income Taxes.

A1.3) Projection Scenarios

- A) Minimum Required Scenarios. The number of scenarios for which projected greatest present values of Accumulated Deficiencies shall be computed shall be the responsibility of the actuary and shall be considered to be sufficient if any resulting understatement in total reserves, as compared with that resulting from running additional scenarios, is not material.
- B) Scenario Calibration Criteria. Returns for the groupings of variable funds shall be determined on a stochastic basis such that the resulting distribution of the Gross Wealth Ratios of the scenarios meets the Scenario Calibration Criteria specified in Appendix 5.

A1.4) Projection Assets

- A) Starting Asset Amount. For the projections of Accumulated Deficiencies, the value of assets at the start of the projection shall be set equal to the approximate value of statutory reserves at the start of the projection. Assets shall be valued consistently with their annual statement values. The amount of such asset values shall equal the sum of the following items, all as of the start of the projection:
- 1) All of the Separate Account assets supporting the contracts;
 - 2) An amount of assets held in the General Account equal to the approximate value of statutory reserves as of the start of the projections less the amount in 1), above.

In many instances the initial General Account assets may be negative, resulting in a projected interest expense. General Account assets chosen for use as described above shall be selected on a consistent basis from one reserve valuation hereunder to the next.

Any hedge assets meeting the requirements described in section A1.1)D) shall be reflected in the projections and included with other General Account assets under item 2) above. To the extent the sum of the value of such hedge assets and the value of assets in item 1) above is greater than

the approximate value of statutory reserves as of the start of the projections, then item 2) above may include enough negative General Account assets or cash such that the sum of items 1) and 2) above equals the approximate value of statutory reserves as of the start of the projections.¹⁰

The actuary shall document which assets were used as of the start of the projection, the approach used to determine which assets were chosen and shall verify that the value of the assets equals the approximate value of statutory reserves at the start of the projection.

- B) Valuation of Projected Assets. For purposes of determining the projected Accumulated Deficiencies, the value of projected assets shall be determined in a manner consistent with their value at the start of the projection. For assets assumed to be purchased during a projection, the value shall be determined in a manner consistent with the value of assets at the start of the projection that have similar investment characteristics.
- C) Separate Account Assets. For purposes of determining the Starting Asset Amounts in subsection A) and the valuation of projected assets in subsection B), assets held in a Separate Account shall be summarized into asset categories determined by the actuary as discussed in section A1.1)B).
- D) General Account Assets. General Account assets shall be projected, net of projected defaults, using assumed investment returns consistent with their book value and expected to be realized in future periods as of the date of valuation. Initial assets that mature during the projection and positive cash flows projected for future periods shall be invested at interest rates, which, at the option of the actuary, are one of the following:
- 1) The forward interest rates implied by the swap curve¹¹ in effect as of the valuation date,
 - 2) The 200 interest rate scenarios available as prescribed for Phase I, C-3 Risk Based Capital calculation, coupled with the Separate Account return scenarios by mating them up with the first 200 such scenarios and repeating this process until all Separate Account return scenarios have been mated with a Phase I scenario, or
 - 3) Interest rates developed for this purpose from a stochastic model that integrates the development of interest rates and the Separate Account returns.

When the option described in 1) above (the forward interest rates implied by the swap curve) is used, an amount shall be subtracted from the interest rates to reflect the current market expectations about future interest rates using the process described in section A1.5)A).

The actuary may switch from 1) to 2), from 1) to 3) or from 2) to 3) from one valuation date to the next, but may not switch in the other direction without approval from the Domiciliary Commissioner.

A1.5) Projection of Annuitization Benefits (including GMIBs)

- A) Assumed Annuitization Purchase Rates at Election. For purposes of projecting annuitization benefits (including annuitizations stemming from the election of a GMIB), the projected annuitization purchase rates shall be determined assuming that market interest rates available at the time of election are the interest rates used to project General Account Assets, as determined in

¹⁰ Further elaboration on potential practices with regard to this issue may be included in a practice note.

¹¹ The swap curve is based on the Federal Reserve H.15 interest swap rates. The rates are for a Fixed Rate Payer in return for receiving three month LIBOR. One place where these rates can be found is <http://www.federalreserve.gov/releases/h15/default.htm>.

A1.4)D). However, where the interest rates used to project General Account Assets are based upon the forward interest rates implied by the swap curve in effect as of the valuation date (i.e., the option described in section A1.4)D)1) is used, herein referred to as a point estimate), the margin between the cost to purchase an annuity using the guaranteed purchase basis and the cost using the interest rates prevailing at the time of annuitization shall be adjusted as discussed below.

If a point estimate is being used, it is important that the margin assumed reflects the current market expectations about future interest rates at the time of annuitization, as described more fully below, and a downward adjustment to the interest rate assumed in the purchase rate basis. The latter adjustment is necessary since a greater proportion of contractholders will select an annuitization benefit when it is worth more than the cash surrender value than when it is not. As a practical matter, this effect can be approximated by using an interest rate assumption in the purchase rate basis that is 0.30 percent below that implied by the forward swap curve, as described below.

To calculate market expectations of future interest rates, the par or current coupon swap curve is used (documented daily in Federal Reserve H.15 with some interpolation needed). Deriving the expected rate curve from this swap curve at a future date involves the following steps:

- 1) Calculate the implied zero-coupon rates. This is a well documented “bootstrap” process. For this process we use the equation $100 = C^n * (v + v^2 + \dots + v^n) + 100v^n$ where the “v” terms are used to stand for the discount factors applicable to cash flows 1,2,...n years hence and C^n is the n-year swap rate. Each of these discount factors are based on the forward curve and therefore are based on different rates, however (i.e. “v²” does not equal v times v). Given the one year swap rate, one can solve for v. Given v and the two year swap rate one can then back into v², and so on.
- 2) Convert the zero coupon rates to one year forward rates by calculating the discount factor needed to get from v^{t-1} to v^t.
- 3) Develop the expected rate curve.

This recognizes that, for example, the five-year forward one-year rate is not the rate the market expects on one year instruments five years from now. The reason is that as the bond gets shorter the “risk premium” in the rate diminishes. This is sometimes characterized as “rolling down” the yield curve. Table A shows the historic average risk premium at various durations. From this table, one can see that to get the rate the market expects a 1 year swap to have five years from now; one must subtract the risk premium associated with six year rates (.95%) and add back that associated with 1 year rates (.50%). This results in a net reduction of .45%.

Table A: Risk Premium by Duration

Duration	Risk Premium	Duration	Risk Premium
1	0.500%	6	0.950%
2	0.750%	7	1.000%
3	0.750%	8	1.100%
4	0.850%	9+	1.150%
5	0.900%		

The Exhibit below combines the three steps. Columns A through D convert the swap curve to the implied forward rate for each future payment date. Columns E through H remove the current risk premium, add the risk premium t years in the future (the Exhibit shows the rate curve five years in the future), and uses that to get the discount factors to apply to the 1 year, 2 year,...5 year cash flows 5 years from now.

Exhibit: Derivation of discount rates expected in the future

A	B	C	D	E	F	G	H
Projection Years	Swap Curve Rate	PV of Zero Coupon	Forward 1 Year Rate	Risk Premium	Risk Premium 5 Years Out	Expected Forward Rate In 5 Years	PV of Zero Coupon In 5 Years
1	2.57%	0.97494	2.5700%	0.50000%			
2	3.07%	0.94118	3.5879%	0.75000%			
3	3.44%	0.90302	4.2251%	0.75000%			
4	3.74%	0.86231	4.7208%	0.85000%			
5	3.97%	0.82124	5.0010%	0.90000%			
6	4.17%	0.77972	5.3249%	0.95000%	0.50000%	4.8749%	0.95352
7	4.34%	0.73868	5.5557%	1.00000%	0.75000%	5.3057%	0.90547
8	4.48%	0.69894	5.6860%	1.10000%	0.75000%	5.3360%	0.85961
9	4.60%	0.66050	5.8209%	1.15000%	0.85000%	5.5209%	0.81463
10	4.71%	0.62303	6.0131%	1.15000%	0.90000%	5.7631%	0.77024
Cell formulas for Projection Year 10:		=(1-B13*SUM(\$C\$4:C12))/(1+B13)	=C12/C13 -1		=E8	=D13-E13+F13	=H12/(1+G13)

Where interest rates are projected stochastically using an integrated model, although one would “expect” the interest rate n years hence to be that implied for an appropriate duration asset by the forward swap curve as described above, there is a steadily widening confidence interval about that point estimate with increasing time until the annuitization date. The “expected margin” in the

purchase rate is less than that produced by the point estimate based on the expected rate, since a greater proportion of contractholders will have an annuitization benefit whose worth is in excess of cash surrender value when margins are low than when margins are high. As a practical matter, this effect can be approximated by using a purchase rate margin based on an earnings rate .30 percent below that implied by the forward swap curve. If a stochastic model of interest rates is used instead of a point estimate then no such adjustment is needed.

B) Projected Election of Guaranteed Minimum Income Benefit and other Annuitization Options. For contracts projected to elect annuitization options (including annuitizations stemming from the election of a GMIB), the projections may assume one of the following at the actuary's option:

- 1) The contract is treated as if surrendered at an amount equal to the statutory reserve that would be required at such time for the payout annuity benefits, or
- 2) The contract is assumed to stay in force, the projected periodic payments are paid, and the Working Reserve is equal to one of the following:
 - a) The statutory reserve required for the payout annuity, if it is a fixed payout annuity, or
 - b) If it is a variable payout annuity, the Working Reserve for a variable payout annuity as defined in Section III)B)5).

If the projected payout annuity is a variable payout annuity containing a floor guarantee (such as a GPAF) under a specified contractual option, only option 2) above shall be used.

Where mortality improvement is used to project future annuitization purchase rates, as discussed in A) above, mortality improvement shall also be reflected on a consistent basis in either the determination of the reserve in 1) above or the projection of the periodic payments in 2) above.

A1.6) Relationship to Risk Based Capital Requirements

- A) The Guideline anticipates that the projections described herein may be used for the determination of Risk Based Capital (the "RBC requirements") for some or all of the contracts falling within the scope of the Guideline. There are several differences between the requirements of the Guideline and the RBC requirements, and among them are two major differences. First, the Conditional Tail Expectation level is different (CTE (70) for the Guideline and CTE (90) for the RBC requirements). Second, the projections described in the Guideline are performed on a basis that ignores Federal Income Tax. That is, under the Guideline, the Accumulated Deficiencies do not include projected Federal Income Tax and the interest rates used to discount the Scenario Greatest Present Value (i.e., the interest rates determined in section A1.4)D)) contain no reduction for Federal Income Tax. Under the RBC requirements, the projections do include projected Federal Income Tax and the discount interest rates used in the RBC requirement do contain a reduction for Federal Income Tax.
- B) To further aid the understanding of the Guideline and any instructions relating to the RBC requirement, it is important to note the equivalence in meaning between the following terms, subject to the differences noted above:
 - 1) The amount that is added to the Starting Asset Amount in Section III)B)6) of the Guideline is similar to the Additional Asset Requirement referenced in the RBC requirement.

- 2) The Conditional Tail Expectation Amount referenced in the Guideline is similar to the Total Asset Requirement referenced in the RBC requirement.

A1.7) Compliance with Actuarial Standards of Practice (ASOPs)

When determining the Conditional Tail Expectation Amount using projections, the analysis shall conform to the Actuarial Standards of Practice as promulgated from time to time by the Actuarial Standards Board.

A1.8) Compliance with Principles

When determining the Conditional Tail Expectation Amount using projections, any interpretation and application of the requirements of the Guideline shall follow the principles discussed in the Section I) Background.

Not for Distribution

APPENDIX 2 - Reinsurance and Statutory Reporting Issues**A.2.1) Treatment of Reinsurance Ceded in the Aggregate Reserve**

- A) Aggregate Reserve Net of and Prior to Reinsurance Ceded. As noted in Section IV)B), the Aggregate Reserve is determined net of reinsurance ceded. Therefore, it is necessary to determine the components needed to determine the Aggregate Reserve (i.e., the Standard Scenario Amount, and either the Conditional Tail Expectation Amount determined using projections or the Conditional Tail Expectation Amount determined using the Alternative Methodology) on a net of reinsurance basis. In addition, as noted in Section IV)B), it may be necessary to determine the Aggregate Reserve determined on a “direct” basis, or prior to reflection of reinsurance ceded. Where this is needed, each of these components shall be determined prior to reinsurance. Sections B) through D) below discuss methods necessary to determine these components on both a “net of reinsurance” and a “prior to reinsurance” basis. Note that due allowance for reasonable approximations may be used where appropriate.
- B) Conditional Tail Expectation Amount Determined using Projections. In order to determine the Aggregate Reserve net of reinsurance ceded, Accumulated Deficiencies, Scenario Greatest Present Values, and the resulting Conditional Tail Expectation Amount shall be determined reflecting the effects of reinsurance treaties that meet the statutory requirements that would allow the treaty to be accounted for as reinsurance within the projections. This involves including, where appropriate, all anticipated reinsurance premiums or other costs and all reinsurance recoveries, where both premiums and recoveries are determined by recognizing any limitations in the reinsurance treaties, such as caps on recoveries or floors on premiums.
- In order to determine the Conditional Tail Expectation Amount prior to reinsurance ceded, Accumulated Deficiencies, Scenario Greatest Present Values, and the resulting Conditional Tail Expectation Amount shall be determined ignoring the effects of reinsurance within the projections. One acceptable approach involves a projection based on the same Starting Asset Amount as for the Aggregate Reserve net of reinsurance and by ignoring, where appropriate, all anticipated reinsurance premiums or other costs and all reinsurance recoveries in the projections.
- C) Conditional Tail Expectation Amount Determined using the Alternative Methodology. If a company chooses to use the Alternative Methodology, as allowed in Section IV)E), it is important to note that the methodology produces reserves on a prior to reinsurance ceded basis. Therefore, where reinsurance is ceded, the Alternative Methodology must be modified to reflect the reinsurance costs and reinsurance recoveries under the reinsurance treaties in the determination of the Aggregate Reserve net of reinsurance. In addition, the Alternative Methodology, unadjusted for reinsurance, shall be applied to the contracts falling under the scope of the Guideline to determine the Aggregate Reserve prior to reinsurance.
- D) Standard Scenario Amount. Where reinsurance is ceded, the Standard Scenario Amount shall be calculated as described in Appendix 3 to reflect the reinsurance costs and reinsurance recoveries under the reinsurance treaties. If it is necessary, the Standard Scenario Amount shall be calculated prior to reinsurance ceded using the methods described in Appendix 3, but ignoring the effects of the reinsurance ceded.

A.2.2) Aggregate Reserve to be held in the General Account

The amount of the reserve held in the General Account shall not be less than the excess of the Aggregate Reserve over the sum of the Basic Reserve, as defined in section A3.2), attributable to the variable portion of all such contracts.

A.2.3) Actuarial Certification and Memorandum

- A) Actuarial Certification. Actuarial Certification of the work done to determine the Aggregate Reserve shall be required. The actuary shall certify that the work performed has been done in a way that substantially complies with all applicable Actuarial Standards of Practice. The scope of this certification does not include an opinion on the adequacy of the Aggregate Reserve,¹² the company's surplus or the company's future financial condition. The actuary shall also note any material change in the model or assumptions from that used previously and the estimated impact of such changes.

Appendix 8 contains more information on the contents of the required Actuarial Certification.

- B) Required Memorandum. An actuarial memorandum shall be constructed documenting the methodology and assumptions upon which the Aggregate Reserve is determined. The memorandum shall also include sensitivity tests that the actuary feels appropriate, given the composition of the company's block of business (i.e., identifying the key assumptions that, if changed, produce the largest changes in the Aggregate Reserve). This memorandum shall have the same confidential status as the actuarial memorandum supporting the actuarial opinion¹³ and shall be available to regulators upon request.

Appendix 8 contains more information on the contents of the required memorandum.

- C) Conditional Tail Expectation Amount Determined using the Alternative Methodology. Where the Alternative Methodology is used, there is no need to discuss the underlying assumptions and model in the required memorandum. Certification that expense, revenue, fund mapping, and product parameters have been properly reflected, however, shall be required.

Appendix 8 contains more information on the contents of the required Actuarial Certification and memorandum.

- D) Material Changes. If there is a material change in results due to a change in assumptions from the previous year, the memorandum shall include a discussion of such change in assumptions and an estimate of the impact it has on the results.

¹² The adequacy of total company reserves, which includes the Aggregate Reserve, is addressed in the company's Actuarial Opinion as required by the NAIC Model Actuarial Opinion and Memorandum Regulation.

¹³ This is consistent with Section 3D(8) of the Standard Valuation Law, which states: "Except as provided in Paragraphs (12), (13) and (14), documents, materials or other information in the possession or control of the Department of Insurance that are a memorandum in support of the opinion, and any other material provided by the company to the commissioner in connection with the memorandum, shall be confidential by law and privileged, shall not be subject to [insert open records, freedom of information, sunshine or other appropriate phrase], shall not be subject to subpoena, and shall not be subject to discovery or admissible in evidence in any private civil action. However, the commissioner is authorized to use the documents, materials or other information in the furtherance of any regulatory or legal action brought as a part of the commissioner's official duties."

APPENDIX 3 - Standard Scenario Requirements

A3.1) Overview

- A) Application to Determine Reserves. A Standard Scenario Reserve shall be determined for each of the contracts falling under the scope of the Guideline by applying section A3.3). This includes those contracts to which the Alternative Methodology is applied.

The Standard Scenario Reserve for a contract with guaranteed living benefits or guaranteed death benefits is based on a projection of the account value based on specified returns for supporting assets equal to the account value. An initial drop is applied to the supporting assets and account value on the valuation date. Subsequently, account values are projected at specified rates earned by the supporting assets less contract and fund charges. The assumptions for the projection of account values and margins are prescribed in section A3.3)C). For any contract with guarantees the Standard Scenario Reserve includes the greatest present value of the benefit payments in excess of account values applied over the present value of revenue produced by the margins.

B) The Standard Scenario Amount

- 1) The Standard Scenario Amount is defined in Section IV)C) of this Guideline as the aggregate of the reserves determined by applying the Standard Scenario Method to each of the contracts falling under the scope of the Guideline. Except as provided in subsection A3.3)B)1), the Standard Scenario Amount equals the sum over all contracts of the Standard Scenario Reserve determined for each contract as of the statement date as described in A3.1)B)2).
- 2) The Standard Scenario Method requires the Standard Scenario Amount to not be less than the sum over all contracts of the Standard Scenario Reserve determined for the contract as of the statement date as described in section A3.3), where the Discount Rate is equal to *DR*, which is defined as the valuation interest rate specified by the Standard Valuation Law for annuities valued on an issue year basis, using Plan Type A and a Guarantee Duration greater than 10 years but not more than 20 years. The presence of guarantees of interest on future premiums and/or cash settlement options is to be determined using the terms of the contracts.

- C) Illustrative Application of the Standard Scenario to a Projection or Model Office. If the Conditional Tail Expectation Amount is determined based on a projection of an inforce prior to the statement date and/or by the use of a model office, which is a grouping of contracts into representative cells, then additional determinations of A3.1)B)2) shall be performed on the prior inforce and/or model office. The calculations are for illustrative purposes to assist in validating the reasonableness of the projection and/or the model office.

The following table identifies the illustrative additional determinations required by this section using the Discount Rate, *DR*, as defined in A3.1)B)2). The additional determinations required are based on how the Conditional Tail Expectation projection or Alternative Methodology is applied. For completeness, the table also includes the determinations required by section A3.1)B)2).

- 1) Run A in the table is required for all companies by section A3.1)B)2). No additional determinations are required if a company's stochastic or alternative methodology result is calculated on individual contracts as of the statement date.
- 2) A company that uses a model office as of the statement date to determine its stochastic or alternative methodology result must provide an additional determination for the model office based on the Discount Rate *DR*, run B.

- 3) A company that uses a contract by contract listing of a prior inforce to determine its stochastic or alternative methodology with result PS and then projects requirements to the statement date with result S must provide an additional determination for the prior inforce based on the Discount Rate *DR*, run C.
- 4) A company that uses a model office of a prior inforce to determine its stochastic or alternative methodology requirements with result PM and then projects requirements to the statement date with result S must provide an additional determination for the prior model office based on the Discount Rate *DR*, run D.

Standard Scenario Run	Guideline Variations	Validation Measures	
		Model Office Projection	Projection of Prior Inforce
A. Valuation on the statement date on inforce contracts with discount rate <i>DR</i>	None	None	None
B. Valuation on the statement date on the model office with discount rate <i>DR</i>	If not material to model office validation	A/B compare to 1.00	None
C. Valuation on a prior inforce date on prior inforce contracts with discount rate <i>DR</i>	If not material to projection validation	None	A/C - S/PS compare to 0
D. Valuation on a prior inforce date on a model office with discount rate <i>DR</i>	If not material to model office or projection validation.	(A/D – S/PM) compare to 0	

Modification of the requirements in section A3.3) when applied to a prior inforce or a model office is permitted if such modification facilitates validating the projection of inforce or the model office. All such modifications should be documented.

A3.2) Basic and Basic Adjusted Reserve - Application of Actuarial Guideline XXXIII

- A) The Basic Reserve for a given contract shall be determined by applying statutory statement valuation requirements applicable immediately prior to adoption of the Guideline to the contract ignoring any guaranteed death benefits in excess of account values or guaranteed living benefits applying proceeds in excess of account values.
- B) The calculation of the Basic Reserve shall assume a return on separate account assets based on the year of issue statutory valuation rate less appropriate asset based charges, including charges for any guaranteed death benefits or guaranteed living benefits. It shall also assume a return for any fixed separate account and general account options equal to the rates guaranteed under the contract.
- C) The Basic Reserve shall be no less than the Cash Surrender Value on the valuation date, as defined in Section III)B) of the Guideline.
- D) The Basic Adjusted Reserve shall be that determined based on A3.2)A) and A3.2)B) except in A3.2)A) free partial withdrawal provisions shall be disregarded when determining surrender charges in applying the statutory statement valuation requirement prior to adoption of the Guideline. Section A3.2)C) shall not apply to the Basic Adjusted Reserve.

A3.3) Standard Scenario Reserve - Application of the Standard Scenario Method

- A) General. Where not inconsistent with the guidance given here, the process and methods used to determine the Standard Scenario Reserve under the Standard Scenario Method shall be the same as required in the calculation of the Conditional Tail Expectation Amount as described in Section IV) of the Guideline. Any additional assumptions needed to determine the Standard Scenario Reserve shall be explicitly documented.
- B) Results for the Standard Scenario Method. For each contract, the Standard Scenario Reserve is the reserve based on 1) or 2) where:
- 1) For contracts without any guaranteed benefits, as defined in Section III)A) of the Guideline and where not subsequently disapproved by the Domiciliary Commissioner, the Standard Scenario Reserve is the Basic Reserve described in section A3.2)A), A3.2)B) and A3.2)C).
 - 2) For all other contracts the Standard Scenario Reserve is equal to the greater of Cash Surrender Value on the valuation date, as defined in Section III)B) of the Guideline, and the quantity a) + b) - c), where:
 - a) Is the Basic Adjusted Reserve calculated for the contract, as described in section A3.2)D);
 - b) Is the greater of zero and the greatest present value at the Discount Rate measured as of the end of each projection year of the negative of the Accumulated Net Revenue described below using the assumptions described in A3.3)C). The Accumulated Net Revenue at the end of a projection year is equal to (i) + (ii) - (iii), where:
 - (i) Is the Accumulated Net Revenue at the end of the prior projection year accumulated at the Discount Rate to the end of the current projection year; the Accumulated Net Revenue at the beginning of the projection (i.e., time 0) is zero;
 - (ii) Are the margins generated during the projection year on account values accumulated at the Discount Rate to the end of the projection year (the factors and assumptions to be used in calculating the margins and account values are in A3.3)C)); and
 - (iii) Are the contract benefits in excess of account values applied, Individual reinsurance premiums and Individual reinsurance benefits payable or receivable during the projection year accumulated at the Discount Rate to the end of the projection year. Individual reinsurance is defined in A3.3)C)2).
 - c) Is the contract's allocation of the value of hedges and Aggregate reinsurance as described in section A3.3)D). Aggregate reinsurance is defined in section A3.3)C)2).

No reinsurance shall be considered in the Standard Scenario Amount if such reinsurance does not meet the statutory requirements that would allow the treaty to be accounted for as reinsurance. The actuary shall determine the projected reinsurance premiums and benefits reflecting all treaty limitations and assuming any options in the treaty to the other party are exercised to decrease the value of reinsurance to the reporting company (e.g., options to increase premiums or terminate coverage). The positive value of any reinsurance treaty that is not guaranteed to the insurer or its successor shall be excluded from the value of reinsurance. The commissioner may require the exclusion of a reinsurance treaty or any portion of a reinsurance treaty if the terms of the

reinsurance) treaty or the portion required to be excluded serves solely to reduce the calculated Standard Scenario Reserve without also reducing risk on scenarios similar to those used to determine the Conditional Tail Expectation Reserve. Any reinsurance reflected in the Standard Scenario Reserve shall be appropriate to the business and not merely constructed to exploit ‘foreknowledge’ of the components of the Standard Scenario Method.

C) Assumptions for use in paragraph A3.3)B)2)b) for Accumulated Net Revenue and Account Values.

- 1) Account Value Return Assumptions. The bases for return assumptions on assets supporting the Account Value are shown in Table I. The “Initial” returns shall be applied to the account value supported by each asset class on the valuation date as immediate drops, resulting in the Account Value at time 0. The “Year 1,” “Years 2 – 5,” and “Year 6+” returns for the equity, bond and balanced classes are gross annual effective rates of return and are used (along with other decrements and/or increases) to produce the Account Value as of the end of each projection interval. For purposes of this section, money market funds supporting Account Value shall be considered part of the Bond class.

The Fixed Fund rate is the greater of the minimum rate guaranteed in the contract or 4% but not greater than the current rates being credited to Fixed Funds on the valuation date.

Account Values shall be projected using the appropriate gross rates from Table I for equity, bond and balanced classes applied to the supporting assets less all fund and contract charges according to the provisions of the funds and contract and applying the Fixed funds rate from Table I as if it were the resulting net rate after deduction for fund or contract charges.

The annual margins on Account Value are defined as follows:

- a) During the Surrender Charge Amortization Period, as determined following the step outlined in section A3.3)E) below:
- (i) 0.20% of Account Value; plus
 - (ii) Any Net Revenue Sharing Income, as defined in section A1.1)E), that is contractually guaranteed to the insurer and its liquidator, receiver, and statutory successor; plus
 - (iii) For all of the guaranteed living benefits of a given contract combined,¹⁴ the greater of:
 - 0.20% of Account Value; or
 - Explicit and optional contract charges for guaranteed living benefits; plus
 - (iv) For all guaranteed death benefits of a given contract combined,¹⁵ the greater of:
 - 0.20% of Account Value; or
 - Explicit and optional contract charges for guaranteed death benefits.
- b) After the Surrender Charge Amortization Period:

¹⁴ This excludes any guaranteed living benefit that is added to the contract simply for the purpose of increasing the revenue allowed under this section.

¹⁵ This excludes any guaranteed death benefit that is added to the contract simply for the purpose of increasing the revenue allowed under this section.

The amount determined in a) above; plus 50% of the excess, if any, of all contract charges (excluding Net Revenue Sharing Income) over the sum of a)(i) , a)(iii) and a)(iv) above.

However, on fixed funds after the surrender charge period, a margin of up to the amount in a) above plus .4% may be used.

Table I

	Initial	Year 1	Years 2 – 5	Year 6+
Equity Class	-13.5%	0%	4.0%	5.50%
Bond Class	0%	0%	4.85%	4.85%
Balanced Class	-8.1%	0%	4.34%	5.24%
Fixed Separate Accounts and General Account (net)	0%	Fixed Fund Rate	Fixed Fund Rate	Fixed Fund Rate

- 2) Reinsurance Credit. Individual reinsurance is defined as reinsurance where the total premiums for and benefits of the reinsurance can be determined by applying the terms of the reinsurance to each contract covered without reference to the premiums or benefits of any other contract covered and summing the results over all contracts covered. Reinsurance that is not Individual is Aggregate.

Individual reinsurance premiums projected to be payable on ceded risk and receivable on assumed risk shall be included in the Projected Net Revenue. Similarly, Individual reinsurance benefits projected to be receivable on ceded risk and payable on assumed risk shall be included in the Projected Net Revenue. No Aggregate reinsurance shall be included in Projected Net Revenue.

- 3) Lapses, Partial Withdrawals, and In-The-Moneyness. Partial withdrawals elected as guaranteed living benefits, see A3.3)C)7), or required contractually (e.g., a contract operating under an automatic withdrawal provision on the valuation date) are to be deducted from the Account Value in each projection interval consistent with the projection frequency used, as described in A3.3)C)6), and according to the terms of the contract. No other partial withdrawals, including free partial withdrawals, are to be deducted from Account Value. All lapse rates should be applied as full contract surrenders.

For purposes of determining the dynamic lapse assumptions shown in Table II below, a guaranteed living benefit is in the money (ITM) for any projection interval if the Account Value at the beginning of the projection interval is less than the Current Value of the guaranteed living benefit (as defined below) also at the beginning of that projection interval.

The Current Value of the guaranteed living benefit at the beginning of any projection interval is either the amount of the current lump sum payment (if exercisable) or the present value of future lump sum or income payments. More specific guidance is provided below. For the purpose of determining the present value, the discount rate shall be equal *DR* as defined in A3.1)B)2). If future living benefit payments are life contingent (i.e., either the right of future exercise or the right to future income benefits expires with

the death of the annuitant or the owner), then the company shall determine the present value of such payments using the mortality table specified in A3.3)C)5).

If a guaranteed living benefit is exercisable (withdrawal can start or, in the case of a GMWB, has begun) at the beginning of the projection interval, then the Current Value of the guaranteed living benefit shall be determined assuming immediate or continued exercise of that benefit.

If a guaranteed living benefit is not exercisable (e.g., due to minimum age or duration requirements) at the beginning of that projection interval, then the Current Value of the guaranteed living benefit shall be determined assuming exercise of the guaranteed living benefit at the earliest possible future projection interval. If the right to exercise the guaranteed living benefit is contingent on the survival of the annuitant or the owner, then the Current Value of the guaranteed living benefit shall assume survival to the date of exercise using the mortality table specified in A3.3)C)5).

Determination of the Current Value of a guaranteed living benefit that is exercisable or payable at a future projection interval shall take account of any guaranteed growth in the basis for the guarantee (e.g., where the basis grows according to an index or an interest rate).

For a GMWB, the Current Value shall be determined assuming the earliest penalty-free withdrawal of guaranteed benefits after withdrawals begin and by applying the constraints of any applicable maximum or minimum withdrawal provisions. If the GMWB is currently exercisable and the right to future GMWB payments is contingent upon the survival of the annuitant or owner, then the Current Value shall assume survival using the mortality table specified in A3.3)C)5). After a GMWB that has payments that are contingent upon the survival of the annuitant or owner has commenced, then the Current Value shall assume survival using the Annuity 2000 Mortality Table.

For an unexercised GMIB, the Current Value shall be determined assuming the option with a reserve closest to the reserve for a 10 year certain and life option. The reserve values and the value of the GMIB on the assumed date of exercise shall be determined using the discount rate *DR* specified in A3.1)B)2) and for life contingent payments, the Annuity 2000 Mortality Table. The Current Value of an unexercised GMIB, however, shall be set equal to the Account Value if the contractholder can receive higher income payments on the assumed date of exercise by electing the same option under the normal settlement option provisions of the contract.

For the purpose of applying the lapse assumptions specified in Table II below or contractholder elections rates specified in A3.3)C)7), the contract shall be considered “out of the money” (OTM) for a projection interval if the Current Value of the guaranteed living benefit at the beginning of the projection interval is less than or equal to the Account Value at the beginning of the same projection interval. If the Current Value of the guaranteed living benefit at the beginning of the projection interval is greater than the Account Value also at the beginning of the projection interval, the contract shall be considered ‘in the money’ (ITM) and the percent ITM shall equal:

$$100 * ((\text{Current Value of the guaranteed living benefit} / \text{Account Value}) - 1)$$

If a contract has multiple living benefit guarantees then the guarantee having the largest Current Value shall be used to determine the percent in the money.

Table II - Lapse Assumptions

	During Surrender Charge Period	After Surrender Charge Period		
		ITM < 10%	10% <= ITM < 20%	20% <= ITM
Death Benefit Only Contracts	5%	10%		
All Guaranteed Living Benefits OTM	5%	10%		
		ITM < 10%	10% <= ITM < 20%	20% <= ITM
Any Guaranteed Minimum Accumulation Benefit ITM	2%	2%	0%	0%
Any Other Guaranteed Living Benefits ITM	3%	7%	5%	2%

- 4) Account Transfers and Future Deposits. No transfers between funds shall be assumed in the projection used to determine the greatest present value amount required under section A3.3)B)2)b) unless required by the contract (e.g., transfers from a dollar cost averaging fund or contractual rights given to the insurer to implement a contractually specified portfolio insurance management strategy or a contract operating under an automatic re-balancing option). When transfers must be modeled, to the extent not inconsistent with contract language, the allocation of transfers to funds must be in proportion to the contract's current allocation to funds.

Margins generated during a projection interval on funds supporting account value are transferred to the Accumulation of Net Revenue and are subsequently accumulated at the Discount Rate. Assets for each class supporting account values are to be reduced in proportion to the amount held in each asset classes at the time of transfer of margins or any portion of Account Value applied to the payment of benefits.

No future deposits to Account Value shall be assumed unless required by the terms of the contract to prevent contract or guaranteed benefit lapse, in which case they must be modeled. When future deposits must be modeled, to the extent not inconsistent with contract language, the allocation of the deposit to funds must be in proportion to the contract's current allocation to such funds.

- 5) Mortality. Mortality at 70% of the 1994 Variable Annuity MGDB Mortality Tables (1994 MGDB tables) through age 85 increasing by 1% each year to 100% of the 1994 MGDB tables at age 115 shall be assumed in the projection used to determine the greatest present value amount required under section A3.3)B)2)b).
- 6) Projection Frequency. The projection used to determine the greatest present value amount required under section A3.3)B)2)b) shall be calculated using an annual or more frequent time step, such as quarterly. For time steps more frequent than annual, assets supporting Account Values at the start of a year may be retained in such funds until year-end (i.e., margin earned during the year will earn the fund rates instead of the Discount Rate until year end) or removed after each time step. However, the same approach shall be applied for all years. Similarly, projected benefits, lapses, elections and other contractholder activity can be assumed to occur annually or at the end of each time step, but the approach shall be consistent for all years.

- 7) Contractholder Election Rates. Contractholder election rates for exercisable ITM guaranteed living benefits other than GMWBs shall be 5% per annum in every projection interval where the living benefit is less than 10% ITM, 15% per annum in every projection interval where the living benefit is 10% or more ITM and less than 20% ITM, and 25% per annum in every projection interval where the living benefit is more than 20% ITM. In addition, the election rate for an exercisable ITM guaranteed living benefit shall be 100% at the last model duration to elect such benefit. This 100% election rate shall be used when a Guaranteed Minimum Accumulation Benefit is at the earliest date that the benefit is exercisable and in-the-money. However, the contractholder election rate for any exercisable ITM guaranteed living benefit shall be zero if exercise would cause the extinction of a guaranteed living benefit having a larger Current Value. For this purpose, GMDBs are not benefits subject to election.

For guaranteed minimum withdrawal benefits, a partial withdrawal, if allowed by contract provisions, equal to the applicable percentage in Table III applied to the contract's maximum allowable partial withdrawal shall be assumed. However, if the contract's minimum allowable partial withdrawal exceeds the partial withdrawal from applying the rate in Table III to the contract's maximum allowable partial withdrawal, then the contract's minimum allowable partial withdrawal shall be assumed.

	Attained Age less than 50	Attained Age 50 to 59	Attained Age 60 or Greater
Withdrawals do not reduce other elective Guarantees that are in the money	50%	75%	100%
Withdrawals reduce elective Guarantees that are in the money	25%	50%	75%

- 8) Indices. If an interest index is required to determine projected benefits or reinsurance obligations, the index must assume interest rates have not changed since the last reported rates before the valuation date. If an equity index is required the index shall be consistent with the last reported index before the valuation date, the initial drop in equity returns and the subsequent equity returns in the standard scenario projection. The sources of information and how they are used to determine the indexes shall be documented and, to the extent possible, consistent from year to year.
- D) Assumptions for use in Section A3.3)B)2)c).

- 1) The Value of Aggregate Reinsurance. The value of Aggregate reinsurance shall be calculated separately from the Accumulated Net Revenue. The value of Aggregate reinsurance is the discounted value, using the statutory valuation rate described in the following paragraph, of the excess of (a) the projected benefit payments from the reinsurance; over (b) the projected gross reinsurance premiums, where (a) and (b) are determined under the assumptions described in section A3.3)C) for all applicable contracts in aggregate.

In order for the value of the Aggregate reinsurance to be consistent with the underlying Standard Scenario reserve, the discount rate shall be a weighted average of the valuation

rates (*DR*) of the contracts that are supported by the Aggregate reinsurance treaty. The weights used to determine this discount rate shall be reasonably related to the risks that are being covered by the Aggregate reinsurance (e.g., account value or values of guaranteed benefits) and shall be applied consistently from year to year. If an appropriate method to determine this discount rate does not exist, the value of the Aggregate reinsurance shall be determined using the statutory valuation rate in effect on the valuation date for annuities valued on an issue year basis using Plan Type A and a Guarantee Duration greater than 10 years but not more than 20 years, determined assuming there are cash settlement options but no interest guarantees on future premiums.

- 2) The Value of Approved Hedges. The value of approved hedges shall be calculated separately from the Accumulated Net Revenue. The value of approved hedges is the difference between: a) the discounted value at the 1-year CMT¹⁶ as of the valuation date of the pre-tax cash flows from the approved hedges; less b) their statement values on the valuation date.

To be an approved hedge for purposes of the Standard Scenario Reserve, a derivative or other investment has to be an actual asset held by the company on the valuation date, be used as a hedge supporting the contracts falling under the scope of the Guideline, and comply with any statutes, laws, or regulations (including applicable documentation requirements) of the domiciliary state or jurisdiction related to the use of derivative instruments.

The Domiciliary Commissioner may require the exclusion of any portion of the value of approved hedges upon a finding that the company's documentation, controls, measurement, execution of strategy or historical results are not adequate to support a future expectation of risk reduction commensurate with the value of approved hedges.

The cash flow projection for approved hedges that expire in less than one year from the valuation date should be based on holding the hedges to their expiration. For hedges with an expiration of more than 1 year, the value of hedges should be based on liquidation of the hedges one year from the valuation date. Where applicable, the liquidation value of hedges shall be consistent with the assumed returns in the Standard Scenario from the start of the projection to the date of liquidation, Black-Scholes pricing, a risk free rate equal to the 5-year CMT as of the valuation date and the annual volatility implicit as of the valuation date in the statement value of the hedges when the statement value of hedges are valued with Black-Scholes pricing and a risk-free rate equal to the 5-year CMT as of the valuation date.¹⁷

There is no credit in the Standard Scenario for dynamic hedging beyond the credit that results from hedges actually held on the valuation date.

¹⁶ For purposes of this Appendix, the term CMT refers to the nominal yields on actively traded non-inflation-indexed issues adjusted to constant maturities, as released daily by the Federal Reserve Board. As of this writing, the current and historical one-year rates may be found at http://www.federalreserve.gov/releases/h15/data/Business_day/H15_TCMNOM_Y1.txt and the current and historical five-year rates may be found at http://www.federalreserve.gov/releases/h15/data/Business_day/H15_TCMNOM_Y5.txt.

¹⁷ Conceptually, the item being hedged, the contract guarantees, and the approved hedges are accounted for at the average present value of the worst 30% of all scenarios, the tail scenarios for a CTE (70) measure. However, the statement value of approved hedges is at market. Therefore, the standard scenario value of approved hedges is a proxy of the adjustment needed to move approved hedges from a market value to a tail value.

- 3) Allocation of the Value of Hedges and the Value of Aggregate Reinsurance. The value of approved hedges and Aggregate reinsurance shall be allocated to the contracts which are supported by the applicable Aggregate reinsurance agreements and approved hedges. A contract's allocation shall be the lesser of the amount in A3.3)B)2)b) for the contract or the product of a) and b) where:
- a) Is the sum of the value of the applicable approved hedges plus the value of the applicable Aggregate reinsurance for all contracts supported by the same hedges and/or the Aggregate reinsurance agreement; and
 - b) Is the ratio of the amount in A3.3)B)2)b) for the contract to the sum of the amount in A3.3)B)2)b) for all contracts supported by the same hedges and/or the Aggregate reinsurance agreement.
- 4) Retention of components. For the seriatim Standard Scenario Reserve on the statement date under each of Sections A3.1)B)1) and A3.1)B)2), the actuary should have available to the Commissioner the following values for each contract:
- a) The Standard Scenario Reserve prior to adjustment under paragraph A3.3)D)3)
 - b) The Standard Scenario Reserve net of the adjustment in A3.3)D)3).
- E) Determination of the Surrender Charge Amortization Period to be used in section A3.3)C)1)a) and b).

The purpose of the Surrender Charge Amortization Period is to help determine how much of the surrender charge is amortized in the Basic Adjusted Reserve portion of the Standard Scenario Amount and how much needs to be amortized in the Accumulated Net Revenue portion. Once determined, the Surrender Charge Amortization Period determines the duration over which the lower level of margins, as described in A3.3)C)1)a), is used. After that duration, the higher level of margins, as described in A3.3)C)1)b), is used.

A separate Surrender Charge Amortization Period is determined for each contract and is based on amounts determined in the calculation of the Basic Adjusted Reserve for that contract. A key component of the calculation is the amount of the surrender charge that is not amortized in the Basic Adjusted Reserve calculation for that contract. This is represented by the difference between the account value and the cash surrender value projected within the Basic Adjusted Reserve calculation for the contract.

The Surrender Charge Amortization Period for a given contract is determined by following the steps:

- 1) Measure the duration of the greatest present value used in the Basic Adjusted Reserve. The Basic Adjusted Reserve is determined for a contract by taking the greatest present value of a stream of projected benefits. The benefit stream that determines the greatest present value typically includes an "ultimate" event (e.g., 100% surrender, 100% annuitization, or maturity). The "BAR Duration" is the length of time between the valuation date and the projected "ultimate" event.
- 2) Determine the amount of the surrender charge not amortized in the Basic Adjusted Reserve. The surrender charge not amortized in the Basic Adjusted Reserve is the difference between the projected account value and the projected cash surrender value at the BAR Duration (i.e., at the time of that projected "ultimate" event). This value for a given contract shall not be less than zero.

- 3) Determine the Surrender Charge Amortization Period before rounding. This equals a) time b) plus c), where:
- a) Equals the ratio of the amount determined in step 2 to the Account Value on the valuation date;
 - b) Equals 100; and
 - c) Equals the BAR Duration determined in step 1.
- 4) Determine the Surrender Charge Amortization Period for the contract. This is the amount determined in step 3, rounded to the nearest number that represents a projection duration, taking into account the projection frequency described in A3.3C)6). For example, step 3 produces a value of 2.15 and the projection frequency is quarterly, the Surrender Charge Amortization Period for the contract is 2.25.

Not for Distribution

APPENDIX 4 - Alternative Methodology

A4.1) General Methodology

- A) General Methodology Description. For variable deferred annuity contracts that either contain no guaranteed benefits or only GMDBs¹⁸ (i.e., no VAGLBs), the Conditional Tail Expectation Amount may be determined by using the method outlined below rather than by using the approach described in Section IV)D) (i.e., based on projections), provided the approach described in Section IV)D) has not been used in prior valuations or else approval has been obtained from the Domiciliary Commissioner.

The Conditional Tail Expectation Amount determined using the Alternative Methodology for a group of contracts with GMDBs shall be determined as the sum of amounts obtained by applying factors to each contract in force as of a valuation date and adding this to the contract's Cash Surrender Value.¹⁹ The resulting Conditional Tail Expectation Amount shall not be less than the Cash Surrender Value in aggregate for the group of contracts to which the Alternative Methodology is applied.

The Conditional Tail Expectation Amount determined using the Alternative Methodology for a group of contracts that contain no guaranteed benefits²⁰ shall be determined using an application of Actuarial Guideline XXXIII, as described below.

For purposes of performing the Alternative Methodology, materially similar contracts within the group may be combined together into subgroups to facilitate application of the factors. Specifically, all contracts comprising a "subgroup" must display substantially similar characteristics for those attributes expected to affect reserves (e.g., definition of guaranteed benefits, attained age, contract duration, years-to-maturity, market-to-guaranteed value, asset mix, etc.). Grouping shall be the responsibility of the actuary but may not be done in a manner that intentionally understates the resulting reserve.

- B) Definitions of Terms Used in this Appendix.

- 1) Annualized Account Charge Differential. This term is the charge as percentage account value (revenue for the company) minus the expense as percentage of account value.
- 2) Asset Exposure. Asset Exposure refers to the greatest possible loss to the insurance company from the value of assets underlying general or separate account contracts falling to zero.
- 3) Benchmark. Benchmarks have similar risk characteristics to the entity (e.g., asset class, index, or fund) to be modeled.
- 4) Deterministic Calculations. In a Deterministic Calculation, a given event (e.g., asset returns going up by 7% then down by 5%) is assumed to occur with certainty. In a stochastic calculation, events are assigned probabilities.

¹⁸ This includes "earnings enhanced death benefits," as discussed in Section III(A)1).

¹⁹ The amount that is added to a contract's Cash Surrender Value may be negative, zero or positive, thus resulting in a reserve for a given contract that could be less than, equal to, or greater than, the Cash Surrender Value.

²⁰ The term "contracts that contain no guaranteed benefits" means that there are no guaranteed benefits at any time during the life of the contract (past, present or future).

- 5) Foreign Securities. Securities issued by entities outside the United States and Canada.
- 6) Grouped Fund Holdings. Grouped Fund Holdings relate to guarantees that apply across multiple deposits or for an entire contract instead of on a deposit-by-deposit basis.
- 7) Guaranteed Value. The Guaranteed Value is the benefit base or a substitute for the account value (if greater than the account value) in the calculation of living benefits or death benefits. The methodology for setting the Guaranteed Value is defined in the variable annuity contract.
- 8) High-Yield Bonds. High-Yield Bonds are below investment grade, with NAIC designations (if assigned) of 3, 4, 5, or 6. Compared to investment grade bonds, these bonds have higher risk of loss due to credit events. Funds containing securities predominately containing securities that are not NAIC designated as 1 or 2 (or similar agency ratings) are considered to be High-Yield.
- 9) Investment Grade Fixed Income Securities. Securities with NAIC designations of 1 or 2 are Investment Grade. Funds containing securities predominately with NAIC designations of 1 or 2 or with similar agency ratings are considered to be Investment Grade.
- 10) Liquid Securities. These securities can be sold and converted into cash at a price close to its true value in a short period of time.
- 11) Margin Offset. Margin Offset is the portion of charges plus any Revenue Sharing allowed under section A1.1)E) available to fund claims and amortization of the unamortized surrender charges allowance.
- 12) Multi-Point Linear Interpolation. This methodology is documented in mathematical literature and calculates factors based on multiple attributes categorized with discrete values where the attributes' actual values may be between the discrete values.
- 13) Model Office. A Model Office converts many contracts with similar features into one contract with specific features for modeling purposes.
- 14) Pre-Packaged Scenarios. The Pre-Packaged Scenarios are the year-by-year asset returns that may be used (but are not mandated) in projections related to the alternative methodology. These scenarios are available on an American Academy of Actuaries website.
- 15) Quota-Share Reinsurance. In this type of reinsurance treaty, the same proportion is ceded on all cessions. The reinsurer assumes a set percentage of risk for the same percentage of the premium, minus an allowance for the ceding company's expenses.
- 16) Resets. A Reset benefit results in a future minimum guaranteed benefit being set equal to the contract's account value at previous set date(s) after contract inception.
- 17) Risk Mitigation Strategy. A Risk Mitigation Strategy is a device to reduce the probability and/or impact of a risk below an acceptable threshold.
- 18) Risk Profile. Risk Profile in the Guideline relates to the prescribed asset class categorized by the volatility of returns associated with that class.

- 19) Risk Transfer Arrangements. A Risk Transfer Arrangement shifts risk exposures (e.g., the responsibility to pay at least a portion of future contingent claims) away from the original insurer.
 - 20) Roll-Up. A Roll-Up benefit results in the guaranteed value associated with a minimum contractual guarantee increasing at a contractually defined interest rate.
 - 21) Volatility. Volatility refers to the annualized standard deviation of asset returns.
- C) Contract-by-Contract Application for Contracts that Contain No Guaranteed Living or Death Benefits. The Alternative Methodology reserve for each contract that contains no guaranteed living or death benefits shall be determined by applying Actuarial Guideline XXXIII. The application shall assume a return on separate account assets equal to the year of issue valuation interest rate less appropriate asset based charges. It shall also assume a return for any fixed separate account and general account options equal to the rates guaranteed under the contract.

The reserve for such contracts shall be no less than the Cash Surrender Value on the valuation date, as defined in Section III)B).

- D) Contract-by-Contract Application for Contracts that Contain GMDBs only. For each contract, factors are used to determine a dollar amount, equal to $R \times (CA + FE) + GC$ (as described below), that is to be added to that contract's Cash Surrender Value as of the valuation date. The dollar amount to be added for any given contract may be negative, zero, or positive. The factors that are applied to each contract shall reflect the following attributes as of the valuation date:
- 1) The contractual features of the variable annuity product,
 - 2) The actual issue age, period since issue, attained age, years-to-maturity, and gender applicable to the contract,
 - 3) The account value and composition by type of underlying variable or fixed fund,
 - 4) Any surrender charges,
 - 5) The GMDB and the type of adjustment made to the GMDB for partial withdrawals (e.g., proportional or dollar-for-dollar adjustment), and
 - 6) Expenses to be incurred and revenues to be received by the company as estimated on a Prudent Estimate basis as described in Section III)B)8) and complying with the requirements for Revenue Sharing as described in section A1.1)E).
- E) Factor Components. Factors shall be applied to determine each of the following components.²¹

CA = Provision for amortization of the unamortized surrender charges calculated by the insurer based on each contract's surrender charge schedule, using prescribed assumptions, except that lapse rates shall be based on the insurer's Prudent Estimate, but with no provision for Federal Income Taxes or mortality;

²¹ Material to assist in the calculation of the components is available on the American Academy of Actuaries' website, at <http://www.actuary.org/life/phase2.asp>.

- FE* = Provision for fixed dollar expenses less fixed dollar revenue calculated using prescribed assumptions, the contract's actual expense charges, the insurer's anticipated actual expenses and lapse rates, both estimated on a Prudent Estimate basis, and with no provision for Federal Income Taxes or mortality;
- GC* = Provision for the costs of providing the GMDB less net available spread-based charges determined by the formula $F \times GV - G \times AV \times R$, where *GV* and *AV* are as defined in section A4.3)A);
- R* = A scaling factor that is a linear function of the ratio of the margin offset to Total Account Charges (*W*) and takes the form $R(\beta_0, \beta_1) = \beta_0 + \beta_1 \times W$. The intercept and slope factors for this linear function vary according to:
- a) Product type,
 - b) Pro-rata or dollar-for-dollar reductions in guaranteed value following partial withdrawals,
 - c) Fund class,
 - d) Attained age,
 - e) Contract duration,
 - f) Asset-based charges, and
 - g) 90% of the ratio of account value to guaranteed value, determined in the aggregate for all contracts sharing the same product characteristics.

Tables of factors for *F*, *G*, β_0 , and β_1 values, reflecting a 65% confidence level and ignoring Federal Income Tax, are available from the National Association of Insurance Commissioners. In calculating $R(\beta_0, \beta_1)$ directly from the linear function provided above, the margin ratio *W* must be constrained to values greater than or equal to 0.2 and less than or equal to 0.6.

Interpolated values of *F*, *G* and *R* (calculated using the linear function described above) for all contracts having the same product characteristics and asset class shall be derived from the pre-calculated values using multi-point linear interpolation over the following four contract-level attributes:

- 1) Attained age,
- 2) Contract duration,
- 3) Ratio of account value to GMDB, and
- 4) The total of all asset based charges, including any fund management fees or allowances based on the underlying variable annuity funds received by the insurer.

The gross asset-based charges for a product shall equal the sum of all contractual asset-based charges plus fund management fees or allowances based on the underlying variable annuity funds received by the insurer determined by complying with the requirements for Prudent Estimate described in Section III)B)8) and Revenue Sharing described in section A1.1)E). Net asset-based charges equal gross asset-based charges less any company expenses assumed to be incurred expressed as a percentage of account value. All expenses that would be assumed if the Conditional Tail Expectation Amount were being computed as described in section A1.1)A) should be reflected either in the calculation of the net asset based charges or in the expenses reflected in the calculation of the amount *FE*.

No adjustment is made for Federal Income Taxes in any of the components listed above.

For purposes of determining the Conditional Tail Expectation Amount using the Alternative Methodology, any interpretation and application of the requirements of the Guideline shall follow the principles discussed in the Section I) Background.

A4.2) Calculation of CA and FE

- A) General Description. Components *CA* and *FE* shall be calculated for each contract, thus reflecting the actual account value and GMDB, as of the valuation date, which is unique to each contract.

Components *CA* and *FE* are defined by deterministic “single-scenario” calculations that account for asset growth, interest and inflation at prescribed rates. Mortality is ignored for these two components. Lapse rates shall be determined on a Prudent Estimate basis as described in Section III)B)8). Lapse rates shall be adjusted by the formula shown below (the Dynamic Lapse Multiplier, λ), which bases the relationship of the GMDB (denoted as *GV* in the formula) to the account value (denoted as *AV* in the formula) on the valuation date. Thus, projected lapse rates are smaller when the GMDB is greater than the account value and larger when the GMDB is less than the account value.

$$\lambda = \text{MIN} \left[U, \text{MAX} \left[L, 1 - M \times \left(\frac{GV}{AV} - D \right) \right] \right],$$

where $U=1$, $L=0.5$, $M=1.25$, and $D=1.1$.

Present values shall be computed over the period from the valuation date to contract maturity at a discount rate of 5.75%.

Projected fund performance underlying the account values is as shown in the table below. Unlike the *GC* component, which requires the entire account value to be mapped, using the Fund Categorization Rules set forth in section A4.4, to a single “equivalent” asset class (as described in A4.4C)), the *CA* and *FE* calculation separately projects each variable subaccount (as mapped to the 8 prescribed categories shown in section A4.4)) using the net asset returns shown in the following table. If surrender charges are based wholly on deposits or premiums as opposed to account value, use of this table may not be necessary.

Asset Class / Fund	Net Annualized Return
Fixed Account	Guaranteed Rate
Money Market	0%
Fixed Income (Bond)	0%
Balanced	-1%
Diversified Equity	-2%
Diversified International Equity	-3%
Intermediate Risk Equity	-5%
Aggressive or Exotic Equity	-8%

- B) Component CA. Component *CA* is computed as the present value of the projected change in surrender charges plus the present value of an implied borrowing cost of 25 basis points at the beginning of each future period applied to the surrender charge at such time.

This component can be interpreted as the “amount needed to amortize the unamortized surrender charge allowance for the *persisting* policies plus the implied borrowing cost.” By definition, the amortization for non-persisting lives in each time period is exactly offset by the collected surrender charge revenue (ignoring timing differences and any waiver upon death). The unamortized balance must be projected to the end of the surrender charge period using the net asset returns and Dynamic Lapse Multiplier, λ , both as described above and the year-by-year amortization discounted also as described above. For simplicity, mortality is ignored in the calculations. Surrender charges and free partial withdrawal provisions are as specified in the contract. Lapse and withdrawal rates are determined on a Prudent Estimate basis, and may vary according to the attributes of the business being valued, including, but not limited to, attained age, contract duration, etc.

- C) Component FE. Component *FE* establishes a provision for fixed dollar expenses (e.g., allocated costs, including overhead expressed as “per contract” and those expenses defined on a “per contract” basis) less any fixed dollar revenue (e.g., annual administrative charges or contract fees) through the earlier of contract maturity or 30 years. *FE* is computed as the present value of the company’s assumed fixed expenses projected at an assumed annual rate of inflation starting in the second projection year. This rate grades uniformly from the current inflation rate (“CIR”) into an ultimate inflation rate of 3% per annum in the 8th year after the valuation date. The CIR is the greater of 3% and the inflation rate assumed for expenses in the company’s most recent asset adequacy analysis for similar business.

A4.3) Calculation of the GC Component

- A) GC Factors. *GC* is calculated as $F \times GV - G \times AV \times R$, where *GV* is the amount of GMDB and *AV* is the contract account value, both as of the valuation date. *F*, *G* and the slope and intercept for the linear function used to determine *R* (identified symbolically as β_0 and β_1) are pre-calculated factors available from the National Association of Insurance Commissioners and known herein as the “Pre-Calculated Factors.” These factors shall be interpolated as described in subsection F), below, and modified as necessary as described in sections A4.3)G) and A4.3)H).

- B) Five Steps. There are five major steps in determining the *GC* component for a given contract:

- 1) Classifying the asset exposure (as specified in subparagraph C), below);
- 2) Determining the risk attributes (as specified in subparagraphs D) and E), below);
- 3) Retrieving the appropriate nodal factors from the factor grid (as described in subparagraph F) below;
- 4) Interpolating the nodal factors, where applicable (optional) also as described in subparagraph F), below; and
- 5) Applying the factors to the contract values.

- C) Classifying Asset Exposure. For purposes of calculating *GC* (unlike what is done for components *CA* and *FE*), the entire account value for each contract must be assigned to one of the eight prescribed fund classes shown in section A4.4), using the Fund Categorization rules in section A4.4).

- D) Product Designs. Factors F , G and $R(\beta_1, \beta_2)$ are available within the Pre-Calculated Factors for the following GMDB product designs:
- 1) Return of Premium (“ROP”),
 - 2) Premiums less withdrawals accumulated at 3% per annum, capped at 2.5 times premiums less withdrawals, with no further increase beyond age 80 (“ROLL3”),
 - 3) Premiums less withdrawals accumulated at 5% per annum, capped at 2.5 times premiums less withdrawals, with no further increase beyond age 80 (“ROLL5”),
 - 4) An annual ratchet design (maximum anniversary value), for which the guaranteed benefit never decreases and is increased to equal the previous contract anniversary account value, if larger, with no further increases beyond age 80 (“MAV”),
 - 5) A design having a guaranteed benefit equal to the larger of the benefits in designs 3 and 4, above (“HIGH”),
 - 6) An enhanced death benefit (“EDB”) equal to 40% of the net earnings on the account (i.e., 40% of account value less total premiums paid plus withdrawals made) with this latter benefit capped at 40% of premiums less withdrawals (“EDB”),
- E) Other Attributes. Factors F , G and $R(\beta_1, \beta_2)$ are available within the Pre-Calculated Factors for the following set of attributes:
- 1) Two Partial Withdrawal Rules – one for contracts having a pro-rata reduction in the GMDB and another for contracts having a dollar-for-dollar reduction,
 - 2) The eight asset classes described in section A4.4)B),
 - 3) Eight attained ages, with a 5-year age setback for females,
 - 4) Five contract durations,
 - 5) Seven values of GV/AV , and
 - 6) Three levels of asset-based income.
- F) Interpolation of F , G and $R(\beta_1, \beta_2)$.
- 1) Values of F , G and $R(\beta_1, \beta_2)$ apply to a contract having the product characteristics listed in section A4.5)A) and shall be determined by selecting values for the appropriate partial withdrawal rule and asset class and then using multi-point linear interpolation among published values for the last four attributes shown in section A4.3)E).
 - 2) Interpolation over all four dimensions is not required, but if not performed over one or more dimensions, the factor used must result in a conservative (higher) value of GC . However, simple linear interpolation using the $AV \div GV$ ratio is mandatory. In this case, the company must choose nodes for the other three dimensions according to the following rules: next highest attained age, nearest duration, and nearest Annualized

Account Charge Differential, as listed in A4.5)C) (i.e., capped at +100 and floored at – 100 bps).

- 3) For $R(\beta_1, \beta_2)$, the interpolation should be performed on the Scaling Factors R calculated using β_1, β_2 , using the ratio of Margin Offset to Total Asset Charges (W), not on the factors β_1 and β_2 themselves.
 - 4) An Excel[®] workbook, Excel[®] add-in and companion dynamic link library (.dll) program is available from the National Association of Insurance Commissioners that can be used to determine the correct values and perform the multi-point linear interpolation.
 - 5) Alternatively, published documentation can be referenced on performing multi-point linear interpolation and the required sixteen values determined using a key that is documented in the table “*Components of Key Used for GC Factor Look-Up*” located in section A4.5)C).
- G) Adjustments to GC for Product Variations & Risk Mitigation/Transfer. In some cases, it may be necessary to make adjustments to the published factors due to:
- 1) A variation in product form wherein the definition of the guaranteed benefit is materially different from those for which factors are available (see section A4.3)H)); and/or
 - 2) A risk mitigation or other management strategy, other than a hedging strategy, that cannot be accommodated through a straightforward and direct adjustment to the published values.

Adjustments may not be made to GC for hedging strategies.

Any adjustments to the published factors must be fully documented and supported through stochastic analysis. Such analysis may require stochastic simulations, but would not ordinarily be based on full inforce projections. Instead, a representative “model office” should be sufficient. Use of these adjusted factors must be supported by a periodic review of the appropriateness of the assumptions and methods used to perform the adjustments, with changes made to the adjustments when deemed necessary by such review.

Note that minor variations in product design do not necessarily require additional effort. In some cases, it may be reasonable to use the factors/formulas for a different product form (e.g., for a roll-up GMDB near or beyond the maximum reset age or amount, the ROP GMDB factors/formulas shall be used, possibly adjusting the guaranteed value to reflect further resets, if any). In other cases, the reserves may be based on two different guarantee definitions and the results interpolated to obtain an appropriate value for the given contract/cell. Likewise, it may be possible to adjust the Alternative Methodology results for certain risk transfer arrangements without significant additional work (e.g., quota-share reinsurance without caps, floors or sliding scales would normally be reflected by a simple pro-rata adjustment to the “gross” GC results).

However, if the contract design is sufficiently different from those provided and/or the risk mitigation strategy is non-linear in its impact on the Conditional Tail Expectation Amount, and there is no practical or obvious way to obtain a good result from the prescribed factors/formulas, any adjustments or approximations must be supported using stochastic modeling. Notably this modeling need not be performed on the whole portfolio, but can be undertaken on an appropriate set of representative policies.

H) Adjusting F and G for Product Design Variations. This subsection describes the typical process for adjusting F and G factors due to a variation in product design. Note that R (as determined by the slope and intercept terms in the factor table) would not be adjusted.

- 1) Select a contract design among those described in section A4.3)D) that is similar to the product being valued. Execute cash flow projections using the documented assumptions (see table of *Liability Modeling Assumptions & Product Characteristics* in section A4.5)A) and table of *Asset Based Fund Charges* in section A4.5)B)) and the pre-packaged scenarios for a set of representative cells (combinations of attained age, contract duration, asset class, AV/GMDB ratio and asset-based charges). These cells should correspond to nodes in the table of pre-calculated factors. Rank (order) the sample distribution of results for the present value of net cost.²² Determine those scenarios that comprise CTE (65).
- 2) Using the results from step 1, average the present value of cost for the CTE (65) scenarios and divide by the current guaranteed value. For the J^{th} cell, denote this value by F_J . Similarly, average the present value of margin offset revenue for the same subset of scenarios and divide by account value. For the J^{th} cell, denote this value by G_J .
- 3) Extract the corresponding pre-calculated factors. For each cell, calibrate to the published tables by defining a “model adjustment factor” (denoted by asterisk) separately for the “cost” and “margin offset” components:

$$F_J^* = \frac{f(\tilde{\theta})}{F_J} \text{ and } G_J^* = \frac{g(\tilde{\theta})}{G_J}$$

- 4) Execute “product specific” cash flow projections using the documented assumptions and pre-packaged scenarios for the same set of representative cells. Here, the company should model the actual product design. Rank (order) the sample distribution of results for the present value of net cost. Determine those scenarios that comprise CTE (65).
 - 5) Using the results from step 4, average the present value of cost for the CTE (65) scenarios and divide by the current guaranteed value. For the J^{th} cell, denote this value by \bar{F}_J . Similarly, average the present value of margin offset revenue for the same subset of scenarios and divide by account value. For the J^{th} cell, denote this value by \bar{G}_J .
 - 6) To calculate the Conditional Tail Expectation Amount for the specific product in question, the company should implement the Alternative Methodology as documented, but use $\bar{F}_J \times F_J^*$ in place of F and $\bar{G}_J \times G_J^*$ instead of G . The same R factors as appropriate for the product evaluated in step 1 shall be used for this step (i.e., the product used to calibrate the cash flow model).
- I) Adjusting GC for Mortality Experience. The factors that have been developed for use in determining GC assume male mortality at 100% of the 1994 Variable Annuity MGDB ALB Mortality Table. Companies electing to use the Alternative Methodology that have not conducted an evaluation of their mortality experience shall use these factors. Other companies should use the procedure described below to adjust for the actuary’s Prudent Estimate of mortality. The development of Prudent Estimate mortality shall follow the requirements and guidance of

²² Present value of net cost = PV [guaranteed benefit claims in excess of account value] – PV [margin offset]. The discounting includes cash flows in all future years (i.e., to the earlier of contract maturity and the end of the horizon).

Appendix 10. Once a company uses the modified method for a block of business, the option to use the unadjusted factors is no longer available for that part of its business. In applying the factors to actual inforce business, a 5-year age setback should be used for female annuitants.

- 1) Develop a set of mortality assumptions based on Prudent Estimate. In setting these assumptions, the actuary shall be guided by the definition of Prudent Estimate and the principles discussed in Appendices 9 and 10 of the Guideline.
- 2) Calculate two sets of net single premiums (NSP) at each attained age: one valued using 100% of the 1994 Variable Annuity MGDB ALB Mortality Table (with the aforementioned 5-year age setback for females) and the other using Prudent Estimate mortality. These calculations shall assume an interest rate of 3.75% and a lapse rate of 7% per year.
- 3) The *GC* factor is multiplied by the ratio, for the specific attained age being valued, of the NSP calculated using the Prudent Estimate mortality to the NSP calculated using the 1994 Variable Annuity MGDB ALB Mortality Table (with the aforementioned 5-year age setback for females).

A4.4) Fund Categorization

- A) Criteria. The following criteria should be used to select the appropriate factors, parameters and formulas for the exposure represented by a specified guaranteed benefit. When available, the volatility of the long-term annualized total return for the fund(s) – or an appropriate benchmark – should conform to the limits presented. For this purpose, “long-term” is defined as twice the average projection period that would be applied to test the product in a stochastic model (generally, at least 30 years).

Where data for the fund or benchmark are too sparse or unreliable, the fund exposure should be moved to the next higher volatility class than otherwise indicated. In reviewing the asset classifications, care should be taken to reflect any additional volatility of returns added by the presence of currency risk, liquidity (bid-ask) effects, short selling and speculative positions.

- B) Asset Classes. Variable subaccounts must be categorized into one of the following eight (8) asset classes. For purposes of calculating *CA* or *FE*, each contract will have one or more of the following asset classes represented, whereas for component *GC*, all subaccounts will be mapped into a single asset class.
- 1) Fixed Account. This class is credited interest at guaranteed rates for a specified term or according to a ‘portfolio rate’ or ‘benchmark’ index. This class offers a minimum positive guaranteed rate that is periodically adjusted according to company policy and market conditions.
 - 2) Money Market/Short-Term. This class is invested in money market instruments with an average remaining term-to-maturity of less than 365 days.
 - 3) Fixed Income. This class is invested primarily in investment grade fixed income securities. Up to 25% of the funds within this class may be invested in diversified equities or high-yield bonds. The expected volatility of the returns for this class will be lower than the Balanced fund class.

- 4) Balanced. This class is a combination of fixed income securities with a larger equity component. The fixed income component should exceed 25% of the portfolio. Additionally, any aggressive or ‘specialized’ equity component should not exceed one-third (33.3%) of the total equities held. Should the fund violate either of these constraints, it should be categorized as an equity fund. This class usually has a long-term volatility in the range of 8% – 13%.
 - 5) Diversified Equity. This class is invested in a broad-based mix of U.S. and foreign equities. The foreign equity component (maximum 25% of total holdings) must be comprised of liquid securities in well-developed markets. Funds in this class would exhibit long-term volatility comparable to that of the S&P500. These funds should usually have a long-term volatility in the range of 13% – 18%.
 - 6) Diversified International Equity. This class is similar to the Diversified Equity class, except that the majority of fund holdings are in foreign securities. This class should usually have a long-term volatility in the range of 14% – 19%.
 - 7) Intermediate Risk Equity. This class has a mix of characteristics from both the Diversified and Aggressive Equity Classes. This class has a long-term volatility in the range of 19% – 25%.
 - 8) Aggressive or Exotic Equity. This class comprises more volatile funds where risk can arise from: underdeveloped markets, uncertain markets, high volatility of returns, narrow focus (e.g., specific market sector), etc. This class (or market benchmark) either does not have sufficient history to allow for the calculation of a long-term expected volatility, or the volatility is very high. This class would be used whenever the long-term expected annualized volatility is indeterminable or exceeds 25%.
- C) Selecting Appropriate Investment Classes. The selection of an appropriate investment type should be done at the level for which the guarantee applies. For guarantees applying on a deposit-by-deposit basis, the fund selection is straightforward. However, where the guarantee applies across deposits or for an entire contract, the approach can be more complicated. In such instances, the approach is to identify for each contract where the “grouped holdings” fit within the categories listed and to classify the associated assets on this basis.

A seriatim process is used to identify the “grouped” fund holdings, to assess the risk profile of the current fund holdings (possibly calculating the expected long-term volatility of the funds held with reference to the indicated market proxies), and to classify the entire ‘asset exposure’ into one of the specified choices. Here, ‘asset exposure’ refers to the underlying assets (separate and/or general account investment options) on which the guarantee will be determined. For example, if the guarantee applies separately for each deposit year within the contract, then the classification process would be applied separately for the exposure of each deposit year.

In summary, mapping the benefit exposure (i.e., the asset exposure that applies to the calculation of the guaranteed minimum death benefits) to one of the prescribed asset classes is a multi-step process:

- 1) Map each separate and/or general account investment option to one of the prescribed asset classes. For some funds, this mapping will be obvious, but for others it will involve a review of the fund’s investment policy, performance benchmarks, composition and expected long-term volatility.

- 2) Combine the mapped exposure to determine the expected long-term “volatility of current fund holdings.” This will require a calculation based on the expected long-term volatility for each fund and the correlations between the prescribed asset classes as given in the table “*Correlation Matrix for Prescribed Asset Classes*,” in section A4.4)D).
- 3) Evaluate the asset composition and expected volatility (as calculated in step 2) of current holdings to determine the single asset class that best represents the exposure, with due consideration to the constraints and guidelines presented earlier in this section.

In step 1, the company should use the fund’s actual experience (i.e., historical performance, inclusive of reinvestment) only as a guide in determining the expected long-term volatility. Due to limited data and changes in investment objectives, style and/or management (e.g., fund mergers, revised investment policy, different fund managers, etc.); the company may need to give more weight to the expected long-term volatility of the fund’s benchmarks. In general, the company should exercise caution and not be overly optimistic in assuming that future returns will consistently be less volatile than the underlying markets.

In step 2, the company should calculate the “volatility of current fund holdings” (for the exposure being categorized) by the following formula

$$\sigma = \sqrt{\sum_{i=1}^n \sum_{j=1}^n w_i w_j \rho_{ij} \sigma_i \sigma_j}$$

using the volatilities and correlations in the following table where $w_i = \frac{AV_i}{\sum_k AV_k}$ is the relative value of fund i expressed as a proportion of total contract value, ρ_{ij} is the correlation between asset classes i and j and σ_i is the volatility of asset class i. An example is provided after the table.

D) Correlation Matrix for Prescribed Asset Classes.

ANNUAL VOLATILITY		FIXED ACCOUNT	MONEY MARKET	FIXED INCOME	BALANCED	DIVERSE EQUITY	INTL EQUITY	INTERM EQUITY	AGGR EQUITY
1.0%	FIXED ACCOUNT	1	0.50	0.15	0	0	0	0	0
1.5%	MONEY MARKET	0.50	1	0.20	0	0	0	0	0
5.0%	FIXED INCOME	0.15	0.20	1	0.30	0.10	0.10	0.10	0.05
10.0%	BALANCED	0	0	0.30	1	0.95	0.60	0.75	0.60
15.5%	DIVERSE EQUITY	0	0	0.10	0.95	1	0.60	0.80	0.70
17.5%	INTL EQUITY	0	0	0.10	0.60	0.60	1	0.50	0.60
21.5%	INTERM EQUITY	0	0	0.10	0.75	0.80	0.50	1	0.70
26.0%	AGGR EQUITY	0	0	0.05	0.60	0.70	0.60	0.70	1

E) Fund Categorization Example. As an example, suppose three funds (Fixed Income, diversified U.S. Equity and Aggressive Equity) are offered to clients on a product with a contract level guarantee (i.e., across all funds held within the contract). The current fund holdings (in dollars) for five sample contracts are shown in the following table.

	1	2	3	4	5
MV Fund X (Fixed Income):	5,000	4,000	8,000	-	5,000
MV Fund Y (Diversified Equity):	9,000	7,000	2,000	6,000	-
MV Fund Z (Aggressive Equity):	1,000	4,000	-	4,000	5,000
Total Market Value:	15,000	15,000	10,000	10,000	10,000
Total Equity Market Value:	10,000	11,000	2,000	10,000	5,000
Fixed Income % (A):	33%	27%	80%	0%	50%
Fixed Income Test (A>75%):	No	No	Yes	No	No
Aggressive % of Equity (B):	10%	36%	n/a	40%	100%
Balanced Test (A>25% & B<33.3%):	Yes	No	n/a	No	No
Volatility of Current Fund Holdings:	10.9%	13.2%	5.3%	19.2%	13.4%
Fund Classification:	Balanced	Diversified*²³	Fixed Income	Intermediate	Diversified

²³ Although the volatility suggests “Balanced Fund,” the Balanced Fund criteria were not met. Therefore, this ‘exposure’ is moved “up” to Diversified Equity. For those funds classified as Diversified Equity, additional analysis would be required to assess whether they should be instead designated as “Diversified International Equity.”

As an example, the “Volatility of Current Fund Holdings” for contract #1 is calculated as $\sqrt{A+B}$ where:

$$A = \left(\frac{5}{15} \times 0.05\right)^2 + \left(\frac{9}{15} \times 0.155\right)^2 + \left(\frac{1}{15} \times 0.26\right)^2$$

$$B = 2 \cdot \left(\frac{5}{15} \cdot \frac{9}{15}\right) (0.1 \times 0.05 \times 0.155) + 2 \cdot \left(\frac{5}{15} \cdot \frac{1}{15}\right) (0.05 \times 0.05 \times 0.26) + 2 \cdot \left(\frac{9}{15} \cdot \frac{1}{15}\right) (0.7 \times 0.155 \times 0.26)$$

So the volatility for contract #1 = $\sqrt{0.0092+0.0026} = 0.109$ or 10.9%.

A4.5) Tables

A) Liability Modeling Assumptions & Product Characteristics used for GC Factors.

Asset Based Charges (MER)	Vary by fund class. See section A4.5)B).
Base Margin Offset	100 basis points per annum.
GMDB Description	<ol style="list-style-type: none"> 1. ROP = return of premium ROP. 2. ROLL3 = 3% roll-up, capped at 2.5 × premium, frozen at age 80. 3. ROLL5 = 5% roll-up, capped at 2.5 × premium, frozen at age 80. 4. MAV = annual ratchet (maximum anniversary value), frozen at age 80. 5. HIGH = Higher of 5% roll-up and annual ratchet. 6. EDB = 40% Enhanced Death Benefit (capped at 40% of deposit). Note that the Pre-Calculated Factors were originally calculated with a combined ROP benefit, but they have been adjusted to remove the effect of the ROP. Thus, the factors for this benefit 5 are solely for the Enhanced Death Benefit.
Adjustment to GMDB Upon Partial Withdrawal	Separate factors for “Pro-Rata by Market Value” and “Dollar-for-Dollar.”
Surrender Charges	Ignored (i.e., zero). Included in the CA component.
Single Premium / Deposit	\$100,000. No future deposits; no intra-contract fund rebalancing.
Base Contract Lapse Rate (Total Surrenders)	<ul style="list-style-type: none"> • Pro-rata by MV: 10% p.a. at all contract durations (before dynamics) • Dollar-for-dollar: 2% p.a. at all contract durations (no dynamics)
Partial Withdrawals	<ul style="list-style-type: none"> • Pro-rata by MV: None (i.e., zero) • Dollar-for-dollar: Flat 8% p.a. at all contract durations (as a % of AV). No dynamics or anti-selective behavior.
Mortality	100% of the 1994 Variable Annuity MGDB Mortality Table (MGDB 94 ALB). For reference, $1000 \times q_x$ rates at ages 65 and 70 for 100% of MGDB 94 ALB Male are 18.191 and 29.363 respectively. Note that section A4.3)I) allows modification to this assumption.
Gender /Age Distribution	100% male. Methodology accommodates different attained ages. A 5-year age setback will be used for female annuitants.
Max. Annuitization Age	All policies terminate at age 95.
Fixed Expenses	Ignored (i.e., zero). Included in the FE component.
Annual Fee and Waiver	Ignored (i.e., zero). Included in the FE component.

Discount Rate	5.75% pre-tax.
Dynamic Lapse Multiplier (Applies only to policies where GMDB is adjusted “pro-rata by MV” upon withdrawal)	$\lambda = \text{MIN} \left[U, \text{MAX} \left[L, 1 - M \times \left(\frac{GV}{AV} - D \right) \right] \right]$ <p>$U=1, L=0.5, M=1.25, D=1.1$</p> <ul style="list-style-type: none"> ▪ Applied to the ‘Base Contract Lapse Rate’ ▪ Does not apply to partial withdrawals.

B) Asset-Based Fund Charges (bps per annum).

Asset Class / Fund	Account Value Charge
Fixed Account	0
Money Market	110
Fixed Income (Bond)	200
Balanced	250
Diversified Equity	250
Diversified International Equity	250
Intermediate Risk Equity	265
Aggressive or Exotic Equity	275

C) Components of Key Used for GC Factor Look-Up.

APPENDIX 5 - Scenario Calibration Criteria

A5.1) General

This Appendix outlines the requirements for the stochastic models used to simulate fund performance.²⁴ Specifically, it sets certain standards that must be satisfied and offers guidance to the actuary in the development and validation of the scenario models. Background material and analysis are presented to support the recommendation. The Appendix focuses on the S&P 500 as a proxy for returns on a broadly diversified U.S. equity fund, but there is also advice on how the techniques and requirements would apply to other types of funds. General modeling considerations such as the number of scenarios and projection frequency are also discussed.

The calibration points given in this Appendix are applicable to gross returns (before the deduction of any fees or charges). To determine the net returns appropriate for the projections required by the Guideline, the actuary shall reflect applicable fees and contractholder charges in the development of projected account values. The projections shall also include the costs of managing the investments and converting the assets into cash when necessary.

As a general rule, funds with higher expected returns should have higher expected volatilities and in the absence of well-documented mitigating factors (e.g., a highly reliable and favorable correlation to other fund returns), should lead to higher reserve requirements.²⁵

State or path dependent models are not prohibited, but must be justified by the historic data and meet the calibration criteria. To the degree that the model uses mean-reversion or path-dependent dynamics, this must be well supported by research and clearly documented in the Memorandum supporting the required actuarial certification.

The equity scenarios used to determine reserves must be available in an electronic format to facilitate any regulatory review.

A5.2) Gross Wealth Ratios

Gross Wealth Ratios derived from the stochastic return scenarios for use with a Separate Account variable fund category for diversified U.S. equities must satisfy calibration criteria consistent with that for the S&P 500 shown in the following table. Under these calibration criteria, Gross Wealth Ratios for quantiles less than 50 percent may not exceed the value from the table corresponding to the quantile, while at quantiles greater than 50 percent; Gross Wealth Ratios may not be less than the corresponding value for the quantile from the table. Gross Wealth Ratios must be tested for holding period 1, 5, 10 and 20 years throughout the projections, except as noted in section A5.3).

The “wealth factors” are defined as gross accumulated values (i.e., before the deduction of fees and charges) with complete reinvestment of income and maturities, starting with a unit investment. These can be less than 1, with “1” meaning a zero return over the holding period.

S&P 500 Total Return Gross Wealth Ratios at the Calibration Points

²⁴ For more details on the development of these requirements, including the development of the calibration points, see the American Academy of Actuaries recommendation on C-3 Phase II risk-based capital.

²⁵ While the model need not strictly adhere to ‘mean-variance efficiency,’ prudence dictates some form of consistent risk/return relationship between the proxy investment funds. In general, it would be inappropriate to assume consistently ‘superior’ expected returns (i.e., risk/return point above the frontier).

Calibration Point	One Year	Five Year	Ten Year	Twenty Year
2.5%	0.78	0.72	0.79	
5.0%	0.84	0.81	0.94	1.51
10.0%	0.90	0.94	1.16	2.10
90.0%	1.28	2.17	3.63	9.02
95.0%	1.35	2.45	4.36	11.70
97.5%	1.42	2.72	5.12	

The scenarios need not strictly satisfy all calibration points, but the actuary should be satisfied that any differences do not materially reduce the resulting reserves.²⁶ In particular, the actuary should be mindful of which tail most affects the business being valued. If reserves are less dependent on the right (left) tail for all products under consideration (e.g., a return of premium guarantee would primarily depend on the left tail, an enhanced death benefit equal to a percentage of the gain would be most sensitive to the right tail, etc.), it is not necessary to meet the right (left) calibration points.

For models that require starting values for certain state variables,²⁷ long-term (‘average’ or ‘neutral’) values should be used for calibration. The same values should normally be used to initialize the models for generating the actual projection scenarios unless an alternative assumption can be clearly justified.²⁸ It should be noted that a different set of initialization parameters might produce scenarios that do not satisfy all the calibration points shown in the above table. However, the S&P 500 scenarios used to determine reserves must meet the calibration criteria.

A5.3) Calibration Requirements Beyond Twenty Years

It is possible to parameterize some path and/or state dependent models to produce higher volatility (and/or lower expected returns) in the first 20 years in order to meet the calibration criteria, but with lower volatility (and/or higher expected returns) for other periods during the forecast horizon. While this property may occur for certain scenarios (e.g., the state variables would evolve over the course of the projection and thereby affect future returns), it would be inappropriate and unacceptable for a company to alter the model parameters and/or its characteristics for periods beyond year 20 in a fashion not contemplated at the start of the projection and primarily for the purpose(s) of reducing the volatility and/or severity of ultimate returns.²⁹

A5.4) Other Funds

Calibration of other markets (funds) is left to the judgment of the actuary, but the scenarios so generated must be consistent with the calibration points in the table in section A5.2). This does not imply a strict functional relationship between the model parameters for various markets/funds, but it would generally be inappropriate to assume that a market or fund consistently “outperforms” (lower risk, higher expected return relative to the efficient frontier) over the long term.

²⁶ See the Preamble to the *Accounting Practices and Procedures Manual* for an explanation of materiality.

²⁷ For example, a stochastic log volatility (“SLV”) model requires the starting volatility. Also, the regime-switching lognormal model requires an assumption about the starting regime.

²⁸ A clear justification exists when state variables are observable or “known” to a high degree of certainty and not merely estimated or inferred based on a “balance of probabilities.”

²⁹ Such adjustments must be clearly documented and justified by the historic data.

The actuary shall document the actual 1-, 5-, 10- and 20-year wealth factors of the scenarios at the same frequencies as in the “S&P 500 Total Return Gross Wealth Ratios at the Calibration Points” table in section A5.2). The annualized mean and standard deviation of the wealth factors for the 1-, 5-, 10- and 20-year holding periods must also be provided. For equity funds, the actuary shall explain the reasonableness of any significant differences from the S&P500 calibration points.

When parameters are fit to historic data without consideration of the economic setting in which the historic data emerged, the market price of risk may not be consistent with a reasonable long-term model of market equilibrium. One possibility for establishing ‘consistent’ parameters (or scenarios) across all funds would be to assume that the market price of risk is constant (or nearly constant) and governed by some functional (e.g., linear) relationship. That is, higher expected returns can only be garnered by assuming greater risk.³⁰

Specifically, two return distributions X and Y would satisfy the following relationship:

$$\text{Market Price of Risk} = \left(\frac{E[R_X] - r}{\sigma_X} \right) = \left(\frac{E[R_Y] - r}{\sigma_Y} \right)$$

where $E[R]$ and σ are respectively the (unconditional) expected returns and volatilities and r is the expected risk-free rate over a suitably long holding period commensurate with the projection horizon. One approach to establish consistent scenarios would set the model parameters to maintain a near-constant market price of risk.

A closely related method would assume some form of ‘mean-variance’ efficiency to establish consistent model parameters. Using the historic data, the mean-variance (alternatively, ‘drift-volatility’) frontier could be constructed from a plot of (mean, variance) pairs from a collection of world market indices. The frontier could be assumed to follow some functional form,³¹ with the coefficients determined by standard curve fitting or regression techniques. Recognizing the uncertainty in the data, a ‘corridor’ could be established for the frontier. Model parameters would then be adjusted to move the proxy market (fund) inside the corridor.

Clearly, there are many other techniques that could be used to establishing consistency between the scenarios. While appealing, the above approaches do have drawbacks³² and the actuary should not be overly optimistic in constructing the model parameters or the scenarios.

Funds can be grouped and projected as a single fund if such grouping is not anticipated to materially reduce reserves. However, care should be taken to avoid exaggerating the benefits of diversification. The actuary must document the development of the investment return scenarios and be able to justify the mapping of the company’s variable accounts to the proxy funds used in the modeling.

³⁰ As an example, the standard deviation of log returns is often used as a measure of risk.

³¹ Quadratic polynomials and logarithmic functions tend to work well.

³² For example, mean-variance measures ignore the asymmetric and fat-tailed profile of most equity market returns.

A5.5) Correlation of Fund Returns

In constructing the scenarios for the proxy funds, the company may require parameter estimates for a number of different market indices. When more than one index is projected, it is generally necessary to allow for correlations in the simulations. It is not necessary to assume that all markets are perfectly positively correlated, but an assumption of independence (zero correlation) between the equity markets would inappropriately exaggerate the benefits of diversification. An examination of the historic data suggests that correlations are not stationary and that they tend to increase during times of high volatility or negative returns. As such, the actuary should take care not to underestimate the correlations in those scenarios used for the reserve calculations.

If the projections include the simulation of interest rates (other than for discounting surplus strain) as well as equity returns, the processes may be independent provided that the actuary can demonstrate that this assumption (i.e., zero correlation) does not materially underestimate the resulting reserves.

A5.6) Number of Scenarios and Efficiency in Estimation

For straight Monte Carlo simulation (with equally probable “paths” of fund returns), the number of scenarios should typically equal or exceed 1000. The appropriate number will depend on how the scenarios will be used and the materiality of the results. The actuary should use a number of scenarios that will provide an acceptable level of precision.

Fewer than 1000 scenarios may be used provided that the actuary has determined through prior testing (perhaps on a subset of the portfolio) that the CTE values so obtained materially reproduce the results from running a larger scenario set.

Variance reduction and other sampling techniques are intended to improve the accuracy of an estimate more efficiently than simply increasing the number of simulations. Such methods can be used provided the actuary can demonstrate that they do not lead to a material understatement of results. Many of the techniques are specifically designed for estimating means, not tail measures, and could in fact reduce accuracy (and efficiency) relative to straight Monte Carlo simulation.³³

The above requirements and warnings are not meant to preclude or discourage the use of valid and appropriate sampling methods, such as Quasi Random Monte Carlo (QRMC), importance sampling or other techniques designed to improve the efficiency of the simulations (relative to pseudo-random Monte Carlo methods). However, the actuary should maintain documentation that adequately describes any such techniques used in the projections. Specifically, the documentation should include the reasons why such methods can be expected not to result in systematic or material under-statement of the resulting reserves compared to using pseudo-random Monte Carlo numbers.

A5.7) Frequency of Projection and Time Horizon

Use of an annual cashflow frequency (“timestep”) is generally acceptable for benefits/features that are not sensitive to projection frequency. The lack of sensitivity to projection frequency should be validated by testing wherein the actuary should determine that the use of a more frequent (i.e., shorter) time step does not materially increase reserves. A more frequent time increment should always be used when the product features are sensitive to projection period frequency.

³³ However, with careful implementation, many variance reduction techniques can work well for CTE estimators. For example, see Manistre, B.J. and Hancock, G. (2003), “Variance of the CTE Estimator,” 2003 Stochastic Modeling Symposium, Toronto, ON, September 2003.

Care must be taken in simulating fee income and expenses when using an annual time step. For example, recognizing fee income at the end of each period after market movements, but prior to persistency decrements, would normally be an inappropriate assumption. It is also important that the frequency of the investment return model be linked appropriately to the projection horizon in the liability model. In particular, the horizon should be sufficiently long so as to capture the vast majority of costs (on a present value basis) from the scenarios.³⁴

A5.8) Pre-Packaged Scenarios

The American Academy of Actuaries has provided 10,000 scenarios on its website³⁵ for the following nineteen asset classes.³⁶

- 1) 3-month U.S. Treasury yields
- 2) 6-month U.S. Treasury yields
- 3) 1-year U.S. Treasury yields
- 4) 2-year U.S. Treasury yields
- 5) 3-year U.S. Treasury yields
- 6) 5-year U.S. Treasury yields
- 7) 7-year U.S. Treasury yields
- 8) 10-year U.S. Treasury yields
- 9) 20-year U.S. Treasury yields
- 10) 30-year U.S. Treasury yields
- 11) Money Market / Short-Term
- 12) U.S. Intermediate Term Government Bonds
- 13) U.S. Long Term Corporate Bonds
- 14) Diversified Fixed Income
- 15) Diversified Balanced Allocation
- 16) Diversified Large Capitalized U.S. Equity

³⁴ As a general guide, the forecast horizon should not be less than 20 years.

³⁵ The pre-packaged scenarios can be found at <http://www.actuary.org/life/phase2.asp> and are fully documented at http://www.actuary.org/pdf/life/c3supp_march05.pdf.

³⁶ Because the reserves calculated using projections involve cash flow projections, the pre-packaged scenarios were developed under the “real world” probability measure (as opposed to a “risk-neutral” basis). Therefore, the pre-packaged scenarios may not be appropriate for purposes of projecting the market value of future hedge instruments within a projection (to the extent such instruments are used in the projections). For this purpose, it may be more appropriate to use risk neutral scenarios to determine the market value of hedge instruments in the cash flow projections that are based on real world scenarios.

- 17) Diversified International Equity
- 18) Intermediate Risk Equity
- 19) Aggressive or Specialized Equity

The scenarios are available as gross monthly accumulation factors (or U.S. Treasury yields) over a 30-year horizon in comma-separated value format (*.csv). These scenarios have been appropriately correlated so that the K^{th} scenario for each asset class must be used together and considered one ‘future investment return scenario.’³⁷ Hence, the scenarios can be combined (by blending the accumulation factors³⁸) to create additional ‘proxy’ scenarios for the company’s funds.

For example, suppose the actuary wanted to construct scenarios for a ‘balanced fund’ that targets a 60/40 allocation between bonds and U.S. equities. If we denote $[AF^X]$ as the matrix of accumulation factors for asset class X, then the balanced scenarios would be defined by $[AF^{BAL}] = 0.60 \times [AF^{BOND}] + 0.40 \times [AF^{S\&P500}]$. Care should be taken to avoid exaggerating the benefits of diversification. The actuary shall document the development of the investment return scenarios and be able to justify the mapping of the company’s variable accounts to the proxy funds used in the modeling.

The U.S. Treasury yields are expressed as nominal semi-annual bond equivalent yields in decimal format. All other returns are expressed as periodic (not cumulative) market accumulation factors (i.e., monthly “gross wealth ratios”). Interest rates are assumed to change at the start of each month, hence the value in column T applies for month T-1. The market accumulation factor in column T represents the growth in month T-1.

If all or a portion of these scenarios are used, then the actuary shall verify that the scenario calibration criteria are met.

³⁷ It is inappropriate to misalign the ordering of scenarios (e.g., scenario J for “Diversified U.S. Equity” cannot be combined with scenario K for “Diversified International Equity,” where $J \neq K$).

³⁸ It is important to blend the accumulation factors (not the returns) in order to achieve the desired asset mix.

APPENDIX 6 - Allocation of the Aggregate Reserves to the Contract Level

Section IV states that the Aggregate Reserve shall be allocated to the contracts falling within the scope of the Guideline. When the Conditional Tail Expectation Amount is greater than the Standard Scenario Amount, this allocation requires that the excess be allocated to the contracts falling within the scope of the Guideline.

A6.1) Allocation when the Aggregate Reserve equals the Conditional Tail Expectation Amount

- A) Single sub-grouping. When the Aggregate Reserve is equal to the Conditional Tail Expectation Amount and the Conditional Tail Expectation Amount is determined in aggregate for all contracts falling within the scope of the Guideline (i.e., a single grouping), as described in Section IV)D), the excess of the Conditional Tail Expectation Amount over the Standard Scenario Amount shall be allocated to each contract on the basis of the difference between the Standard Scenario Reserve and the Cash Surrender Value³⁹ on the valuation date for the contract. If the cash surrender value is not defined or not available, the Standard Scenario Amount will be the basis of allocation.
- B) Multiple sub-groupings. When the Aggregate Reserve is equal to the Conditional Tail Expectation Amount and the Conditional Tail Expectation Amount is determined using more than one sub-grouping, as described in Section IV)D), the allocation of the excess of the Conditional Tail Expectation Amount over the Standard Scenario Amount shall reflect that sub-grouping of contracts used to determine the Conditional Tail Expectation Amount, as described in Section IV)D).

For example, when the Conditional Tail Expectation Amount is determined using sub-grouping, the excess of the aggregate (i.e., the total for all contracts within the scope of the Guideline) Conditional Tail Expectation Amount over the aggregate Standard Scenario Amount shall be allocated only to those contracts that are part of sub-groupings whose contributions to the Conditional Tail Expectation Amount exceed their contribution to the Standard Scenario Amount.

In the case of such sub-groupings, the excess of the aggregate Conditional Tail Expectation Amount over the aggregate Standard Scenario Amount shall be allocated to each sub-grouping in proportion to the difference between the Conditional Tail Expectation and the Standard Scenario Reserve for each sub-grouping for which that excess is positive.

Once the allocation to each sub-grouping is determined, the excess of the reserve allocated to such sub-grouping over the Standard Scenario Amount determined for that sub-grouping shall be allocated to each contract within that sub-grouping on the basis of the difference between the Standard Scenario Reserve and the Cash Surrender Value on the valuation date for the contracts. If the cash surrender value is not defined or not available, the Standard Scenario Amount will be the basis of allocation.

³⁹ Note that since the Standard Scenario Reserve for a contract is, by definition, greater than or equal to the Cash Surrender Value, it is understood that the difference between the Standard Scenario Reserve and the Cash Surrender Value for each contract will never be less than zero.

As an example, consider a company with the results of the following three sub-groupings:

Sub-grouping	A	B	C	Total
Conditional Tail Expectation Amount	28	40	52	120
Standard Scenario Amount	20	45	30	95
Aggregate Reserve				120
(1) – (2)	8	-5	22	25
Allocation	6.67	0	18.33	25

In this example, the excess of the Conditional Tail Expectation Amount over the Standard Scenario Amount, in aggregate, equals 25 (i.e., the “Total” column of row 1 less row 2, or 120 – 95). This excess of 25 would be allocated only to those contracts that are part of sub-groupings whose contributions to the Conditional Tail Expectation Amount exceed their contributions to the Standard Scenario Amount. In this example, that would be contracts in sub-groupings A and C (since in sub-grouping B, the contribution to the Standard Scenario Amount exceeds the contribution to the Conditional Tail Expectation Amount). Therefore, the excess of 25 would be allocated to the contracts in sub-groupings A and C in proportion to the difference between the Conditional Tail Expectation Amount and the Standard Scenario Reserve for those sub-groupings (i.e. row 4). In this example, the total difference between the Conditional Tail Expectation Amount and the Standard Scenario Reserve for the contracts in sub-groupings A and C equals 8 + 22, or 30. This would result in 8/30 of the excess of the Conditional Tail Expectation Amount over the Standard Scenario Amount (or 6.67) to be allocated to the contracts in sub-groupings A and 22/30 of the excess of the Conditional Tail Expectation Amount over the Standard Scenario Amount (or 18.33) to be allocated to the contracts in sub-groupings C as shown on line (5) above.

In this example, the allocation of the Aggregate Reserve to contracts within sub-grouping B would equal the Standard Scenario Reserve for those contracts (as described in section A6.2) below). For sub-groupings A and C, the difference between the allocation of the Aggregate Reserve to each of those sub-grouping and the Standard Scenario Amount determined for each of those sub-grouping would be allocated to each contract within each of those sub-groupings based on the difference between the Standard Scenario Reserve and the Cash Surrender Value for each of the contracts within the relevant sub-group. The result would be an allocated Aggregate Reserve for a given contract that would be equal to the Standard Scenario Reserve for that contract plus the amount of the difference between 1) and 2) below that is allocated to that contract, where:

- 1) Equals the allocation of the Aggregate Reserve to that contract’s sub-grouping; and
- 2) Equals the Standard Scenario Amount determined for that contract’s sub-grouping.

A6.2) Allocation when the Aggregate Reserve equals the Standard Scenario Amount

The Standard Scenario Amount, as required by Section IV)C), is calculated on a contract-by-contract basis, as described in Appendix 3. Therefore, when the Aggregate Reserve is equal to the Standard Scenario Amount, the reserve allocated to each contract shall be the reserve calculated for each contract under the Standard Scenario method.

APPENDIX 7 – Modeling of Hedges

A7.1) Initial Considerations

The appropriate costs and benefits of hedging instruments that are currently held by the company in support of the contracts falling under the scope of the Guideline (excluding those that involve the offsetting of the risks associated with variable annuity guarantees with other products outside of the scope of the Guideline, such as equity-indexed annuities) shall be included in the calculation of the Conditional Tail Expectation Amount, determined in accordance with Section IV)D) and section A1.4) of the Guideline (i.e., Conditional Tail Expectation Amount using projections). If the company is following a Clearly Defined Hedging Strategy (“hedging strategy”), as defined in Section III, in accordance with an investment policy adopted by the Board of Directors, or a committee of Board members, the company is eligible to reduce the amount of the Conditional Tail Expectation Amount using projections otherwise calculated. The investment policy must clearly articulate the company’s hedging objectives, including the metrics that drive rebalancing/trading. This specification could include maximum tolerable values for investment losses, earnings, volatility, exposure, etc. in either absolute or relative terms over one or more investment horizons vis-à-vis the chance of occurrence. Company management is responsible for developing, documenting, executing and evaluating the investment strategy, including the hedging strategy, used to implement the investment policy.

For this purpose, the investment assets refer to all the assets including derivatives supporting covered products and guarantees. This is also referred to as the investment portfolio. The investment strategy is the set of all asset holdings at all points in time in all scenarios. The hedging portfolio, which is also referred to as the hedging assets, is a subset of the investment assets. The hedging strategy is the hedging asset holdings at all points in time in all scenarios. There is no attempt to distinguish what is the hedging portfolio and what is the investment portfolio in this Appendix. Nor is the distinction between investment strategy and hedging strategy formally made here. Where necessary to give effect to the intent of this Appendix, the requirements applicable to the hedging portfolio or the hedging strategy are to apply to the overall investment portfolio and investment strategy.

This particularly applies to restrictions on the reasonableness or acceptability of the models that make up the stochastic cash flow model used to perform the projections, since these restrictions are inherently restrictions on the joint modeling of the hedging and non-hedging portfolio. To give effect to these requirements, they must apply to the overall investment strategy and investment portfolio.

The cost and benefits of hedging instruments that are currently held by the company in support of the contracts falling under the scope of the Guideline shall be included in the stochastic cash flow model used to calculate the Conditional Tail Expectation Amount in accordance with Section IV)D) (the “model”). If the company is following a Clearly Defined Hedging Strategy, the model shall take into account the cost and benefits of hedge positions expected to be held by the company in the future based on the operation of the hedging strategy.

Before either a new or revised hedging strategy can be used to reduce the amount of the Conditional Tail Expectation Amount otherwise calculated, the hedging strategy should be in place (i.e., effectively implemented by the company) for at least three months. The company may meet the time requirement by having evaluated the effective implementation of the hedging strategy for at least three months without actually having executed the trades indicated by the hedging strategy (e.g., mock testing or by having effectively implemented the strategy with similar annuity products for at least three months).

These requirements do not supersede any statutes, laws, or regulations of any state or jurisdiction related to the use of derivative instruments for hedging purposes and should not be used in determining whether a company is permitted to use such instruments in any state or jurisdiction.

A7.2) Background

The analysis of the impact of the hedging strategy on cash flows is typically performed using either one of two methods as described below. Although a hedging strategy would normally be expected to reduce risk provisions, the nature of the hedging strategy and the costs to implement the strategy may result in an increase in the amount of the Conditional Tail Expectation Amount otherwise calculated.

The fundamental characteristic of the first method is that all hedging positions, both the currently held positions and those expected to be held in the future, are included in the stochastic cash flow model used to determine the Scenario Greatest Present Value, as discussed in Section IV)D), for each scenario.

The fundamental characteristic of the second method is that the effectiveness of the current hedging strategy (including currently held hedge positions) on future cash flows is evaluated, in part or in whole, outside of the stochastic cash flow model. In this case, the reduction to the Conditional Tail Expectation Amount otherwise calculated should be commensurate with the degree of effectiveness of the hedging strategy in reducing accumulated deficiencies otherwise calculated.

Regardless of the methodology used by the company, the ultimate effect of the current hedging strategy (including currently held hedge positions), on the Conditional Tail Expectation Amount needs to recognize all risks, associated costs, imperfections in the hedges and hedging mismatch tolerances associated with the hedging strategy. The risks include, but are not limited to: basis, gap, price, parameter estimation, and variation in assumptions (mortality, persistency, withdrawal, annuitization, etc.). Costs include, but are not limited to: transaction, margin (opportunity costs associated with margin requirements) and administration. In addition, the reduction to the Conditional Tail Expectation Amount attributable to the hedging strategy may need to be limited due to the uncertainty associated with the company's ability to implement the hedging strategy in a timely and effective manner. The level of operational uncertainty varies indirectly with the amount of time that the new or revised strategy has been in effect or mock tested.

No hedging strategy is perfect. A given hedging strategy may eliminate or reduce some but not all risks, transforms some risks into others, introduces new risks or has other imperfections. For example, a delta-only hedging strategy does not adequately hedge the risks measured by the "Greeks" other than delta. Another example is that financial indices underlying typical hedging instruments typically do not perform exactly like the separate account funds, and hence the use of hedging instruments has the potential for introducing basis risk.

A7.3) Calculation of CTE Amount (reported)

The company should begin by calculating "CTE Amount (best efforts)" – the results obtained when the Conditional Tail Expectation Amount (or "CTE Amount") is based on incorporating the hedging strategy (including currently held hedge positions) into the stochastic cash flow model, including all of the factors and assumptions needed to execute the hedging strategy (e.g., stochastic implied volatility).

Because most models will include at least some approximations or idealistic assumptions, CTE Amount (best efforts) may overstate the impact of the hedging strategy. To compensate for potential overstatement of the impact of the hedging strategy, the company shall recalculate the Conditional Tail Expectation Amount assuming the company has no dynamic hedging strategy (i.e., reflect only hedge positions held by the company on the valuation date. The result so obtained is called "CTE Amount (adjusted)." In some situations the determination of CTE Amount (adjusted) may include both direct and indirect techniques.

Finally, the reported value for the Conditional Tail Expectation Amount is given by:

$$\text{CTE Amount (reported)} = E \times \text{CTE Amount (best efforts)} + (1 - E) \times \text{CTE Amount (adjusted)}$$

The value for E (an “effectiveness factor”) reflects the actuary’s view as to the level of sophistication of the stochastic cash flow model and its ability to properly reflect the parameters of the hedging strategy (i.e., the “Greeks” being covered by the strategy) as well as the associated costs, risks, and benefits E will be no greater than 0.70. As the sophistication of the stochastic cash flow model increases, the value for E increases (i.e., the greater the ability of the CTE Amount (best efforts) model to capture all risks and uncertainties, the higher the value of E). If the model used to determine the “CTE Amount (best efforts)” effectively reflects all of the parameters used in the hedging strategy, the value of E may be up to 0.70. If certain economic risks are not hedged, yet the model does not generate scenarios that sufficiently capture those risks, E must be in the lower end of the range. If hedge cash flows are not modeled directly, E will be no greater than 0.30. Simplistic hedge cash flow models will have a value of E in the low range between 0.00 and 0.70.

Additionally, the company shall demonstrate that, based on an analysis of at least the most recent 12 months, the model is able to replicate the hedging strategy in a way that justifies the value used for E. A company that does not have 12 months of experience to date shall set E to a value no greater than 0.30.

A7.4) Specific Considerations and Requirements

As part of the process of choosing a methodology and assumptions for estimating the future effectiveness of the current hedging strategy (including currently held hedge positions) for purposes of reducing the Conditional Tail Expectation Amount, the actuary should review actual historical hedging effectiveness. The actuary shall evaluate the appropriateness of the assumptions on future trading, transaction costs, and other elements of the model, the strategy, the mix of business, and other items that are likely to result in materially adverse results. This includes an analysis of model assumptions that, when combined with the reliance on the hedging strategy, are likely to result in adverse results relative to those modeled. The parameters and assumptions shall be adjusted (based on testing contingent on the strategy used and other assumptions) to levels that fully reflect the risk based on historical ranges and foreseeable future ranges of the assumptions and parameters. If this is not possible by parameter adjustment, the model shall be modified to reflect them at either Anticipated Experience or adverse estimates of the parameters.

A discontinuous hedging strategy is a hedging strategy where the relationships between the sensitivities to equity markets and interest rates (commonly referred to as the Greeks) associated with the guaranteed contractholder options embedded in the variable annuities and other in-scope products and these same sensitivities associated with the hedging assets are subject to material discontinuities. This includes, but is not limited to, a hedging strategy where material hedging assets will be obtained when the variable annuity account balances reach a predetermined level in relationship to the guarantees. Any hedging strategy, including a delta hedging strategy, can be a discontinuous hedging strategy if implementation of the strategy permits material discontinuities between the sensitivities to equity markets and interest rates associated with the guaranteed contractholder options embedded in the variable annuities and other in-scope products and these same sensitivities associated with the hedging assets. There may be scenarios that are particularly costly to discontinuous hedging strategies, especially where those result in large discontinuous changes in sensitivities (Greeks) associated with the hedging assets. Where discontinuous hedging strategies contribute materially to a reduction in the Conditional Tail Expectation Amount, the actuary must evaluate the interaction of future trigger definitions and the discontinuous hedging strategy, in addition to the items mentioned in the previous paragraph. This includes an analysis of model assumptions that, when combined with the reliance on the discontinuous hedging strategy, may result in adverse results relative to those modeled.

Implementing a strategy that has a strong dependence on acquiring hedging assets at specific times that depend on specific values of an index or other market indicators may not be implemented as precisely as planned.

The combination of elements of the stochastic cash flow model, including the initial actual market asset prices, prices for trading at future dates, transaction costs, and other assumptions should be analyzed by the actuary as to whether the stochastic cash flow model permits hedging strategies that make money in some scenarios without losing a reasonable amount in some other scenarios. This includes, but is not limited to:

- A) Hedging strategies with no initial investment that never lose money in any scenario and in some scenarios make money; or
- B) Hedging strategies that with a given amount of initial money never make less than accumulation at the one-period risk free rates in any scenario but make more than this in one or more scenarios.

If the stochastic cash flow model allows for such situations, the actuary should be satisfied that the results do not materially rely directly or indirectly on the use of such strategies. In addition, the actuary should disclose the situations and provide supporting documentation as to why the actuary believes the situations are not material for determining the Conditional Tail Expectation Amount. If the results do materially rely directly or indirectly on the use of such strategies, the strategies may not be used to reduce the Conditional Tail Expectation Amount otherwise calculated.

In addition to the above, the method used to determine prices of financial instruments for trading in scenarios should be compared to actual initial market prices. If there are substantial discrepancies, the actuary should disclose the substantial discrepancies and provide supporting documentation as to why the model-based prices are appropriate for determining the Conditional Tail Expectation Amount. In addition to comparisons to initial market prices, there should be testing of the pricing models that are used to determine subsequent prices when scenarios involve trading financial instruments. This testing should consider historical relationships. For example, if a method is used where recent volatility in the scenario is one of the determinants of prices for trading in that scenario, then that model should approximate actual historic prices in similar circumstances in history.

A7.5) Certification and Documentation

The actuary must provide a certification that the values for E, CTE Amount (adjusted) and CTE Amount (best efforts) were calculated using the process discussed above and the assumptions used in the calculations were reasonable for the purpose of determining the Conditional Tail Expectation Amount. The actuary shall document the method(s) and assumptions (including data) used to determine CTE Amount (adjusted) and CTE Amount (best efforts) and maintain adequate documentation as to the methods, procedures and assumptions used to determine the value of E.

The actuary must provide a certification as to whether the Clearly Defined Hedging Strategy is fully incorporated into the stochastic cash flow model and any supplementary analysis of the impact of the hedging strategy on the Conditional Tail Expectation Amount. The actuary must document the extent to which elements of the hedging strategy (e.g., time between portfolio rebalancing) are not fully incorporated into the stochastic cash flow model and any supplementary analysis to determine the impact, if any. In addition, the actuary must provide a certification and maintain documentation to support the certification that the hedging strategy designated as the Clearly Defined Hedging Strategy meets the requirements of a Clearly Defined Hedging Strategy including that the implementation of the hedging strategy in the stochastic cash flow model and any supplementary analysis does not include knowledge of

events that occur after any action dictated by the hedging strategy (i.e. the model cannot use information about the future that would not be known in actual practice).

A financial officer of the company (e.g., Chief Financial Officer, Treasurer or Chief Investment Officer) or a person designated by them who has direct or indirect supervisory authority over the actual trading of assets and derivatives must certify that the hedging strategy meets the definition of a Clearly Defined Hedging Strategy and that the Clearly Defined Hedging Strategy is the hedging strategy being used by the company in its actual day to day risk mitigation efforts.

Not for Distribution

APPENDIX 8 – Certification Requirements**A8.1) Management Certification**

Management must provide signed and dated written representations as part of the valuation documentation that the valuation appropriately reflects management's intent and ability to carry out specific courses of actions on behalf of the entity where such is relevant to the valuation. This certification will be submitted no later than March 1. Upon written request by the company, the commissioner may grant an extension of the date for submission of the certification.

A8.2) Actuarial Certification

- A) General Description. The certification shall be provided by a qualified actuary and consist of at least the following:
- 1) A paragraph identifying the actuary and his or her qualifications;
 - 2) A scope paragraph identifying the reserves as of the valuation date for contracts included in the certification categorized by the approaches used to determine the reserves (e.g., Alternative Methodology, Projections, Standard Scenario);
 - 3) A reliance paragraph describing those areas, if any, where the certifying actuary has relied on other experts;
 - a) A reliance statement from each of those relied on should accompany the certification.
 - b) The reliance statements should note the information being provided and a statement as to the accuracy, completeness or reasonableness, as applicable, of the information.
 - 4) A paragraph certifying that the reserve was calculated in accordance with the principles and requirements of the Guideline;
 - 5) A paragraph certifying that the assumptions used for these calculations are Prudent Estimate assumptions for the products, scenarios, and purpose being tested; and
 - 6) A paragraph stating that the qualified actuary is not opining on the adequacy of the company's surplus or its future financial condition.
 - 7) This certification will be submitted no later than March 1. Upon written request by the company, the commissioner may grant an extension of the date for submission of the certification.

A8.3) Supporting Memorandum

- A) General Description. A supporting memorandum shall be created to document the methodology and assumptions used to determine the Aggregate Reserve. The information shall include the comparison of the Standard Scenario Amount to the Conditional Tail Expectation Amount required by Section IV)A) in the determination of the Aggregate Reserve.
- B) Alternative Methodology using Published Factors.
- 1) If a seriatim approach was not used, disclose how contracts were grouped.

- 2) Disclosure of assumptions to include:
 - a) Component CA
 - (i) Mapping to prescribed asset categories
 - (ii) Lapse and withdrawal rates
 - b) Component FE
 - (i) Determination of fixed dollar costs and revenues
 - (ii) Lapse and withdrawal rates
 - (iii) Inflation rates
 - c) Component GC
 - (i) Disclosure of contract features and how the company mapped the contract form to those forms covered by the Alternative Methodology factors
 - Product Definition - If not conservatively assigned to a published factor, company specific factors or stochastic modeling is required.
 - Partial Withdrawal Provision
 - Fund Class - Disclose the process used to determine the single asset class that best represents the exposure for a contract. If individual funds are mapped into prescribed categories, the process used to map the individual funds should be disclosed.
 - Attained Age
 - Contract Duration
 - Ratio of Account Value to Guaranteed Value
 - Annualized Account Charge Differential from Base Assumption
 - (ii) Derivation of Equivalent Account Charges
 - (iii) Derivation of margin offset
 - (iv) Disclosure of interpolation procedures and confirmation of node determination
 - 3) Disclosure, if applicable, of reinsurance that exists and how it was handled in applying published factors (For some reinsurance, creation of company-specific factors or stochastic modeling may be required.).
 - a) Discuss how reserves before reinsurance were determined.
- C) Alternative Factors based on Company-Specific Factors.
- 1) Disclosure of requirements consistent with Published Factors, as noted in subsection B) above.
 - 2) Stochastic analysis supporting adjustments to published factors should be fully documented. This analysis needs to be submitted when initially used and be available upon request in subsequent years. Adjustments may include:
 - a) Contract design;
 - b) Risk mitigation strategy (excluding hedging); and
 - c) Reinsurance.
- D) Stochastic Modeling.
- 1) Assets
 - a) Description including type and quality
 - b) Investment & disinvestment assumptions

- c) Describe assets used at the start of the projection
 - d) Source of asset data
 - e) Asset valuation basis
 - f) Documentation of assumptions
 - (i) Default costs
 - (ii) Prepayment functions
 - (iii) Market value determination
 - (iv) Yield on assets acquired
 - (v) Mapping and grouping of funds to modeled asset classes
 - g) Hedging Strategy
 - (i) Documentation of strategy
 - (ii) Identification of current positions
 - (iii) Description on how strategy was incorporated into modeling
 - Basis risk, gap risk, price risk, assumption risk
 - Document the methods and criterion used to estimate the a priori effectiveness of the hedging strategy
 - (iv) Documentation required for specific consideration raised in section A7.4).
 - (v) Documentation and certification required by section A7.5).
- 2) Liabilities
- a) Product descriptions
 - b) Source of Liabilities
 - c) Grouping of contracts
 - d) Reserve method and modeling (e.g., Working Reserves were set to CSV)
 - e) Investment Reserves
 - f) Describe how reinsurance was handled in the models, including how reserves gross of reinsurance were modeled.
 - g) Documentation of assumptions (i.e., list assumptions, discuss the sources and the rationale for using the assumptions).
 - (i) Premiums and subsequent deposits
 - (ii) Withdrawal, Lapse and Termination Rates
 - Partial Withdrawal (including treatment of dollar-for-dollar offsets on GMDBs and VAGLBs, and Required Minimum Distributions
 - Lapses / Surrenders
 - (iii) Crediting Strategy
 - (iv) Mortality
 - (v) Annuitization rates
 - (vi) Income Purchase rates
 - (vii) GMIB and GMWB Utilization rates
 - (viii) Commissions
 - (ix) Expenses
 - (x) Persistency Bonuses
 - (xi) Investment / Fund Choice
 - (xii) Revenue Sharing
 - (xiii) Asset Allocation, Rebalancing and Transfer Assumptions
 - Dollar Cost Averaging
 - h) The section showing the assumptions used for lapse and utilization assumptions for contracts with guaranteed living benefits in the development of the Conditional Tail Expectation Amount, as described in section A9.7).

- 3) Scenarios
 - a) Description of scenario generation for interest rates and equity returns
 - (i) Disclose the number “n” of scenarios used and the methods used to determine the sampling error of the CTE (70) statistic when using “n” scenarios.
 - (ii) Time step of model (e.g., monthly, quarterly, annual)
 - (iii) Correlation of fund returns
 - b) Calibration
 - (i) Gross Wealth Ratios for equity funds
 - Disclosure of adjustments to model parameters, if any.
 - Disclosure of 1-year, 5-year and 10-year wealth factors, as well as mean and standard deviation.
 - (ii) Consistency of other funds to equity funds
 - (iii) Correlation between all funds
 - (iv) Estimate of market return volatility assumptions underlying the generated scenarios compared to actual observed volatility underlying market values.
 - c) Extent of use of pre-packaged scenarios and support for mapping variable accounts to proxy funds
 - 4) Description and results of sensitivity tests performed. At the request of the domiciliary commissioner, the company shall provide a sensitivity test showing an estimate of the impact of the market return volatility assumption when market volatility is materially higher than assumed in the generated scenarios.
 - 5) Documentation of all material changes in the model or assumptions from that used previously and the estimated impact of such changes. This documentation, or a summary of this documentation, shall be included in an executive summary or some other prominent place in the memorandum.
 - 6) A description of the methods used to validate the model and a summary of the results of the validation testing.
- E) Standard Scenario.
- 1) For the amounts in 2), 3) and 4) below report the Basic Reserve in A3.3)B)2)a), the projection requirements in A3.3)B)2)b), the value of Aggregate reinsurance in A3.3)D)1), the value of hedges in A3.3)D)2), the total allocation of the value of hedges and Aggregate reinsurance in A3.3)B)2)c) and the Standard Scenario Reserve.
 - 2) Report the Standard Scenario Amount as of the valuation date.
 - 3) If applicable, report the Standard Scenario Amount on the inforce prior to the valuation date that was used to project the reserve requirements to the valuation date.
 - 4) If applicable, report the Standard Scenario Amount on the model office used to represent the inforce.
 - 5) Discuss modifications, if any, in the application of the standard scenario requirements to produce the amounts in 2), 3) and 4) above.

- 6) Document any assumptions, judgments or procedures not prescribed in the Standard Scenario Method or in the Guideline that are used to produce the Standard Scenario Amount.
 - 7) If applicable, documentation of approval by the commissioner to use the Basic Reserve as the Standard Scenario Amount.
 - 8) Document the company's calculation of DR.
 - 9) Document the allocation of funds to Equity, Bond, Balanced and Fixed classes.
 - 10) A statement by the actuary that none of the reinsurance treaties included in the Standard Scenario serve solely to reduce the calculated Standard Scenario Reserve without also reducing risk on scenarios similar to those used to determine the Conditional Tail Expectation Reserve. This should be accompanied by a description of any reinsurance treaties that have been excluded from the Standard Scenario along with an explanation of why the treaty was excluded.
- F) The memorandum shall be made available for examination by the commissioner upon his or her request but shall be returned to the company after such examination and shall not be considered a record of the insurance department or subject to automatic filing with the commissioner.

Not for Distribution

APPENDIX 9 – Contractholder Behavior

A9.1) General

Contractholder behavior assumptions encompass actions such as lapses, withdrawals, transfers, recurring deposits, benefit utilization, option election, etc. Contractholder behavior is difficult to predict and behavior assumptions can significantly impact the results. In the absence of relevant and fully credible empirical data, the actuary should set behavior assumptions on the conservative end of the plausible spectrum (consistent with the definition of Prudent Estimate).

In setting behavior assumptions, the actuary should examine, but not be limited by, the following considerations:

- 1) Behavior can vary by product, market, distribution channel, fund performance, time/product duration, etc.
- 2) Options embedded in the product may impact behavior.
- 3) Options may be elective or non-elective in nature. Living benefits are often elective and death benefit options are generally non-elective.
- 4) Elective contractholder options may be more driven by economic conditions than non-elective options.
- 5) As the value of a product option increases, there is an increased likelihood that contractholders will behave in a manner that maximizes their financial interest (e.g., lower lapses, higher benefit utilization, etc.).
- 6) Behavior formulas may have both rational and irrational components (irrational behavior is defined as situations where some contractholders may not always act in their best financial interest). The rational component should be dynamic but the concept of rationality need not be interpreted in strict financial terms and might change over time in response to observed trends in contractholder behavior based on increased or decreased financial efficiency in exercising their contractual options.
- 7) Options that are ancillary to the primary product features may not be significant drivers of behavior. Whether an option is ancillary to the primary product features depends on many things such as:
 - a) For what purpose was the product purchased?
 - b) Is the option elective or non-elective?
 - c) Is the value of the option well known?
- 8) External influences, including emergence of viatical / life settlement companies, may impact behavior.

A9.2) Aggregate vs. Individual Margins

As noted in Section III)B)8), Prudent Estimate assumptions are developed by applying a margin for uncertainty to the Anticipated Experience assumption. The issue of whether the level of the margin applied to the Anticipated Experience assumption is determined in aggregate or independently for each and every behavior assumption is discussed in Principle 3 in Section II) of this Guideline, which states:

The choice of a conservative estimate for each assumption may result in a distorted measure of the total risk. Conceptually, the choice of assumptions and the modeling decisions should be made so that the final result approximates what would be obtained for the Conditional Tail Expectation Amount at the required CTE level if it were possible to calculate results over the joint distribution of all future outcomes. In applying this concept to the actual calculation of the Conditional Tail Expectation Amount, the actuary should be guided by evolving practice and expanding knowledge base in the measurement and management of risk.

Although this Principle discusses the concept of determining the level of margins in aggregate, it notes that the application of this concept shall be guided by evolving practice and expanding knowledge. From a practical standpoint, it may not always be possible to completely apply this concept to determine the level of margins in aggregate for all behavior assumptions.

Therefore, the actuary shall determine Prudent Estimate assumptions independently for each behavior (e.g., mortality lapses, and benefit utilization), using the requirements and guidance in this Appendix and throughout the guideline, unless the actuary can demonstrate that an appropriate method was used to determine the level of margin in aggregate for two or more behaviors.

A9.3) Sensitivity Testing

The impact of behavior can vary by product, time period, etc. Sensitivity testing of assumptions is required and shall be more complex than e.g., base lapse assumption minus 1% across all contracts. A more appropriate sensitivity test in this example might be to devise parameters in a dynamic lapse formula to reflect more out-of-the-money contracts lapsing and/or more holders of in-the-money contracts persisting and eventually utilizing the guarantee. The actuary should apply more caution in setting assumptions for behaviors where testing suggests that stochastic modeling results are sensitive to small changes in such assumptions. For such sensitive behaviors, the actuary shall use higher margins when the underlying experience is less than fully relevant and credible.

A9.4) Specific Considerations and Requirements

Within materiality considerations, the actuary should consider all relevant forms of contractholder behavior and persistency, including but not limited to the following:

- 1) Mortality (additional guidance and requirements regarding mortality is contained in Appendix 10)
- 2) Surrenders
- 3) Partial Withdrawals (Systematic and Elective)
- 4) Fund Transfers (Switching/Exchanges)
- 5) Resets/Ratchets of the Guaranteed Amounts (Automatic and Elective)
- 6) Future Deposits

It may be acceptable to ignore certain items that might otherwise be explicitly modeled in an ideal world, particularly if the inclusion of such items reduces the calculated provisions. For example:

- 1) The impact of fund transfers (intra-contract fund “switching”) might be ignored, unless required under the terms of the contract (e.g., automatic asset re-allocation/rebalancing, dollar cost averaging accounts, etc.)
- 2) Future deposits might be excluded from the model, unless required by the terms of the contracts under consideration and then only in such cases where future premiums can reasonably be anticipated (e.g., with respect to timing and amount).

However, the actuary should exercise caution in assuming that current behavior will be indefinitely maintained. For example, it might be appropriate to test the impact of a shifting asset mix and/or consider future deposits to the extent they can reasonably be anticipated and increase the calculated amounts.

Normally, the underlying model assumptions would differ according to the attributes of the contract being valued. This would typically mean that contractholder behavior and persistency may be expected to vary according to such characteristics as (this is not an exhaustive list):

- 1) Gender
- 2) Attained age
- 3) Issue age
- 4) Contract duration
- 5) Time to maturity
- 6) Tax status
- 7) Fund value
- 8) Investment option
- 9) Guaranteed benefit amounts
- 10) Surrender charges, transaction fees or other contract charges
- 11) Distribution channel

Unless there is clear evidence to the contrary, behavior assumptions should be no less conservative than past experience. Margins for contractholder behavior assumptions shall assume, without relevant and credible experience or clear evidence to the contrary, that contractholders’ efficiency will increase over time.

In determining contractholder behavior assumptions, the company shall use actual experience data directly applicable to the business segment (i.e., direct data) if it is available. In the absence of direct data, the company should then look to use data from a segment that are similar to the business segment (i.e., other than direct experience), whether or not the segment is directly written by the company. If data from a similar business segment are used, the assumption shall be adjusted to reflect differences between the two segments. Margins shall reflect the data uncertainty associated with using data from a similar but not

identical business segment. The actuary shall document any significant similarities or differences between the two business segments, the data quality of the similar business segment and the adjustments and the margins applied.

Where relevant and fully credible empirical data do not exist for a given contractholder behavior assumption, the actuary shall set the contractholder behavior assumption to reflect the increased uncertainty such that the contractholder behavior assumption is shifted towards the conservative end of the plausible range of expected experience that serves to increase the Aggregate Reserve. If there are no relevant data, the actuary shall set the contractholder behavior assumption to reflect the increased uncertainty such that the contractholder behavior assumption is at the conservative end of the range. Such adjustments shall be consistent with the definition of Prudent Estimate, with the Principles described in Section I, and with the guidance and requirements in this Appendix.

Ideally, contractholder behavior would be modeled dynamically according to the simulated economic environment and/or other conditions. It is important to note, however, that contractholder behavior should neither assume that all contractholders act with 100% efficiency in a financially rational manner nor assume that contractholders will always act irrationally.

A9.5) Dynamic Assumptions

Consistent with the concept of Prudent Estimate assumptions described earlier, the liability model should incorporate margins for uncertainty for all risk factors which are not dynamic (i.e., the non-scenario tested assumptions) and are assumed not to vary according to the financial interest of the contractholder.

The actuary should exercise care in using static assumptions when it would be more natural and reasonable to use a dynamic model or other scenario-dependent formulation for behavior. With due regard to considerations of materiality and practicality, the use of dynamic models is encouraged, but not mandatory. Risk factors which are not scenario tested, but could reasonably be expected to vary according to a stochastic process, or future states of the world (especially in response to economic drivers) may require higher margins and/or signal a need for higher margins for certain other assumptions.

Risk factors that are modeled dynamically should encompass the plausible range of behavior consistent with the economic scenarios and other variables in the model, including the non-scenario tested assumptions. The actuary shall test the sensitivity of results to understand the materiality of making alternate assumptions and follow the guidance discussed above on setting assumptions for sensitive behaviors.

A9.6) Consistency with the CTE Level

All behaviors (i.e., dynamic, formulaic and non-scenario tested) should be consistent with the scenarios used in the CTE calculations (generally, the approximately top 1/3 of the loss distribution). To maintain such consistency, it is not necessary to iterate (i.e., successive runs of the model) in order to determine exactly which scenario results are included in the CTE measure. Rather, in light of the products being valued, the actuary should be mindful of the general characteristics of those scenarios likely to represent the tail of the loss distribution and consequently use Prudent Estimate assumptions for behavior that are reasonable and appropriate in such scenarios. For variable annuities, these “valuation” scenarios would typically display one or more of the following attributes:

- 1) Declining and/or volatile separate account asset values;
- 2) Market index volatility, price gaps and/or liquidity constraints;

- 3) Rapidly changing interest rates.

The behavior assumptions should be logical and consistent both individually and in aggregate, especially in the scenarios that govern the results. In other words, the actuary should not set behavior assumptions in isolation, but give due consideration to other elements of the model. The interdependence of assumptions (particularly those governing customer behaviors) makes this task difficult and by definition requires professional judgment, but it is important that the model risk factors and assumptions:

- 1) Remain logically and internally consistent across the scenarios tested;
- 2) Represent plausible outcomes; and
- 3) Lead to appropriate, but not excessive, asset requirements.

The actuary should remember that the continuum of “plausibility” should not be confined or constrained to the outcomes and events exhibited by historic experience.

Companies should attempt to track experience for all assumptions that materially affect their risk profiles by collecting and maintaining the data required to conduct credible and meaningful studies of contractholder behavior.

A9.7) Additional Considerations and Requirements for Assumptions Applicable to Guaranteed Living Benefits

Experience for contracts without guaranteed living benefits may be of limited use in setting a lapse assumption for contracts with in-the-money or at-the-money guaranteed living benefits. Such experience may only be used if it is appropriate (e.g., lapse experience on contracts without a living benefit may have relevance to the early durations of contracts with living benefits) and relevant to the business and is accompanied by documentation that clearly demonstrates the relevance of the experience, as discussed in the following paragraph.

The supporting memorandum required by Appendix 8 of this Guideline, shall include a separately identifiable section showing the assumptions used for lapse and utilization assumptions for contracts with guaranteed living benefits in the development of the Conditional Tail Expectation Amount. This section shall be considered part of the supporting memorandum and shall show the formulas used to set the assumptions and describe the key parameters affecting the level of the assumption (e.g., age, duration, in-the-moneyness, during and after the surrender charge period). The section shall include a summary that shows the lapse and utilization rates that result from various combinations of the key parameters. The section shall show any experience data used to develop the assumptions and describe the source, relevance and credibility of that data. If relevant and credible data were not available, the section should discuss how the assumption is consistent with the requirement that the assumption is to be on the conservative end of the plausible range of expected experience. The section shall also discuss the sensitivity tests performed to support the assumption. This separately identifiable section shall be made available on a standalone basis if requested by the Domiciliary Commissioner. If it is requested, the section shall have the same confidential status as the supporting memorandum and the actuarial memorandum supporting the actuarial opinion, as discussed in section A2.3)B).

Regarding lapse assumptions for contracts with guaranteed living benefits, the section shall include, at a minimum, the following:

- 1) Actual to expected lapses on two bases, where “expected” equals one of the following:
 - a) Prudent estimate assumptions used in the development of the Conditional Tail Expectation Amount;
 - b) The assumptions used in the Standard Scenario;
- 2) The lapse assumptions used in the development of Conditional Tail Expectation Amount and corresponding actual experience separated by:
 - a) Logical blocks of business (based on company’s assessment);
 - b) Duration (at a minimum this should show during the surrender charge period vs. after the surrender charge period);
 - c) In-the-moneyness (consistent with how dynamic assumptions are determined); and
 - d) Age (to the extent age impacts the election of benefits lapse).

This data shall be separated by experience incurred in the following periods:

- a) In the past year;
- b) In the past three years; and
- c) All years.

Not for Distribution

APPENDIX 10 – Specific Guidance and Requirements for Setting Prudent Estimate Mortality Assumptions

A10.1) Overview

- A) Intent. The guidance and requirements in this Appendix apply for setting Prudent Estimate mortality assumptions when determining the Conditional Tail Expectation Amount (whether using projections or the Alternative Methodology). The intent is for Prudent Estimate mortality assumptions to be based on facts, circumstances and appropriate actuarial practice (where more than one approach to appropriate actuarial practice exists, the actuary should select the practice that the actuary deems most appropriate under the circumstances) with only a limited role for unsupported actuarial judgment.
- B) Description. Prudent Estimate mortality assumptions are determined by first developing expected mortality curves based on either available experience or published tables. Where necessary, margins are applied to the experience to reflect data uncertainty. The expected mortality curves are then adjusted based on the credibility of the experience used to determine the expected mortality curve. Section A10.2) addresses guidance and requirements for determining expected mortality curves and section A10.3) addresses guidance and requirements for adjusting the expected mortality curves to determine Prudent Estimate mortality.

Finally, the credibility-adjusted tables shall be adjusted for mortality improvement (where such adjustment is permitted or required) using the guidance and requirements in section A10.4).

- C) Business Segments. For purposes of setting Prudent Estimate mortality assumptions, the products falling under the scope of the Guideline shall be grouped into business segments with different mortality assumptions. The grouping should generally follow the pricing, marketing, management and/or reinsurance programs of the company. Where less refined segments are used for setting the mortality assumption than is used in business management the documentation should address the impact, if material, of the less refined segmentation on the resulting reserves.
- D) Margin for Data Uncertainty. The expected mortality curves that are determined in section A10.2) may need to include a margin for data uncertainty. The margin could be in the form of an increase or a decrease in mortality, depending on the business segment under consideration. The margin shall be applied in a direction (i.e., increase or decrease in mortality) that results in a higher reserve. A sensitivity test may be needed to determine the appropriate direction of the provision for uncertainty to mortality. The test could be a prior year mortality sensitivity analysis of the business segment or an examination of current representative cells of the segment.

For purposes of this Appendix, if mortality must be increased (decreased) to provide for uncertainty the business segment is referred to as a plus (minus) segment.

It may be necessary, because of a change in the mortality risk profile of the segment, to reclassify a business segment from a plus (minus) segment to a minus (plus) segment to the extent compliance with this subsection requires such a reclassification.

A10.2) Determination of Expected Mortality Curves

- A) Experience Data. In determining expected mortality curves the company shall use actual experience data directly applicable to the business segment (i.e., direct data) if it is available. In the absence of direct data, the company should then look to use data from a segment that is similar to the business segment (i.e., other than direct experience). See section B) below for

additional considerations. Finally, if there is no data, the company shall use the applicable table, as required in subsection C) below.

- B) Data Other than Direct Experience. If expected mortality curves for a segment are being determined using data from a similar business segment (whether or not directly written by the company), the actuary shall document any similarities or differences between the two business segments (e.g., type of underwriting, marketing channel, average policy size, etc.). The actuary shall also document the data quality of the mortality experience of the similar business. Adjustments shall be applied to the data to reflect differences between the business segments and margins shall be applied to the adjusted expected mortality curves to reflect the data uncertainty associated with using data from a similar but not identical business segment. The actuary shall document the adjustments and the margins applied.

To the extent the mortality of a business segment is reinsured, any mortality charges that are consistent with the company's own pricing and applicable to a substantial portion of the mortality risk may also be a reasonable starting point for the determination of the company's expected mortality curves. The actuary shall document the application of such reinsurance charges and how they were used to set the company's expected mortality curves for the segment.

- C) No Data Requirements. When little or no experience or information is available on a business segment, the company shall use expected mortality curves that would produce expected deaths no less than using 100% of the 1994 Variable Annuity MGDB mortality table for a plus segment and expected deaths no greater than 100% of the Annuity 2000 table for a minus segment. If mortality experience on the business segment is expected to be atypical (e.g., demographics of target markets are known to have higher (lower) mortality than typical), these "no data" mortality requirements may not be adequate.
- D) Additional Considerations Involving Data. The following considerations shall apply to mortality data specific to the business segment for which assumptions are being determined (i.e., direct data discussed in subsection A) above or other than direct data discussed in subsection B) above).
- 1) Underreporting of deaths. Mortality data shall be examined for possible underreporting of deaths. Adjustments shall be made to the data if there is any evidence of underreporting. Alternatively, exposure by lives or amounts on contracts for which death benefits were in the money may be used to determine expected mortality curves. Underreporting on such exposures should be minimal; however, this reduced subset of data will have less credibility.
 - 2) Experience by contract duration. Experience of a plus segment shall be examined to determine if mortality by contract duration increases materially due to selection at issue. In the absence of information, the actuary shall assume that expected mortality will increase by contract duration for an appropriate select period. As an alternative, if the actuary determines that mortality is impacted by selection, the actuary could apply margins to the expected mortality in such a way that the actual mortality modeled does not depend on contract duration.
 - 3) Modification and Relevance of data. Even for a large company the quantity of life exposures and deaths are such that a significant amount of smoothing may be required to determine expected mortality curves from mortality experience. Expected mortality curves, when applied to the recent historic exposures (e.g., 3 to 7 years), should not result in an estimate of aggregate number of deaths less (greater) than the actual number deaths during the exposure period for plus (minus) segments. If this condition is not satisfied,

the actuary must document the rationale in support of using expected mortality that differs from recent mortality experience.

In determining expected mortality curves (and the credibility of the underlying data), older data may no longer be relevant. The “age” of the experience data used to determine expected mortality curves should be documented. There should be commentary in the documentation on the relevance of the data (e.g., any actual and expected changes in markets, products and economic conditions over the historic and projected experience).

- 4) Other considerations. In determining expected mortality curves, consideration should be given to factors that include, but are not limited to, trends in mortality experience, trends in exposure, volatility in year-to-year A/E mortality ratios, mortality by lives relative to mortality by amounts, changes in the mix of business and product features that could lead to mortality selection.

E) Documentation Requirements.

- 1) All Segments. The documentation should include any material considerations necessary to understand the development of mortality assumptions for the statutory valuation even if such considerations are not explicitly mentioned in this section. The documentation should be explicit when material judgments were required and such judgments had to be made without supporting historic experience.

The documentation shall:

- a) Explain the rationale for the grouping of contracts into different segments for the determination of mortality assumptions and characterize the type and quantity of business that constitute each segment.
- b) Describe how each segment was determined to be a plus or minus segment.
- c) Summarize any mortality studies used to support mortality assumptions, quantify the exposures and corresponding deaths, describe the important characteristics of the exposures and comment on unusual data points or trends.
- d) Document the age of the experience data used to determine expected mortality curves and comment on the relevance of the data.
- e) Document the mathematics used to adjust mortality based on credibility and summarize the result of applying credibility to the mortality segments.
- f) Discuss any assumptions made on mortality improvements, the support for such assumptions and how such assumptions adjusted the modeled mortality.
- g) Describe how the expected mortality curves compare to recent historic experience and comment on any differences.
- h) Discuss how the mortality assumptions are consistent with the goal of achieving the required CTE level over the joint distribution of all future outcomes, in keeping with Principle #3 and Appendix 9.

If the study was done on a similar business segment, identify the differences in the business segment on which the data were gathered and the business segment on which the data were used to determine mortality assumptions for the statutory valuation. Describe how these differences were reflected in the mortality used in modeling.

If mortality assumptions for the statutory valuation were based in part on reinsurance rates, document how the rates were used to set expected mortality (e.g., assumptions made on loadings in the rates and/or whether the assuming company provided their expected mortality and the rationale for their assumptions).

- 2) Plus Segments. For a plus segment, the documentation shall also discuss the examination of the mortality data for the underreporting of deaths and experience by duration, and describe any adjustments that were made as a result of the examination.
- 3) Minus Segments. For a minus segment the documentation shall also discuss how the mortality deviations on minus segments compare to those on any plus segments. To the extent the overall margin is reduced, the documentation should include support for this assumption.

A10.3) Adjustment for Credibility to Determine Prudent Estimate Mortality

- A) Adjustment for Credibility. The expected mortality curves determined in section A10.2) shall be adjusted based on the credibility of the experience used to determine the curves in order to arrive at Prudent Estimate mortality. The adjustment for credibility shall result in blending the expected mortality curves with a mortality table consistent with a statutory valuation mortality table. For a plus segment, the table shall be consistent with 100% of the 1994 Variable Annuity MGDB table (or a more recent mortality table adopted by the NAIC to replace this table). For a minus segment, the table shall be consistent with 100% of the 2000 Annuity table (or a more recent mortality table adopted by the NAIC to replace that table). The approach used to adjust the curves shall suitably account for credibility.⁴⁰
- B) Adjustment of Statutory Valuation Mortality for Improvement. For purposes of the adjustment for credibility, the statutory valuation mortality table for a plus segment may be and the statutory valuation mortality table for a minus segment must be adjusted for mortality improvement. Such adjustment shall reflect applicable published industrywide experience from the effective date of the respective statutory valuation mortality table to the experience weighted average date underlying the data used to develop the expected mortality curves (discussed in section A10.2)).
- C) Credibility Procedure. The credibility procedure used shall:
 - 1) Produce results that are reasonable in the professional judgment of the actuary,
 - 2) Not tend to bias the results in any material way,
 - 3) Be practical to implement,
 - 4) Give consideration to the need to balance responsiveness and stability,
 - 5) Take into account not only the level of aggregate claims but the shape of the mortality curve, and
 - 6) Contain criteria for full credibility and partial credibility that have a sound statistical basis and be appropriately applied.

Documentation of the credibility procedure used shall include a description of the procedure, the statistical basis for the specific elements of the credibility procedure, and any material changes from prior credibility procedures.

⁴⁰ For example, when credibility is zero, an appropriate approach should result in a mortality assumption consistent with 100% of the statutory valuation mortality table used in the blending.

- D) Further Adjustment of the Credibility-adjusted Table for Mortality Improvement. The credibility-adjusted table used for plus segments may be and the credibility adjusted date used for minus segments must be adjusted for applicable published industrywide experience from the experience weighted average date underlying the company experience used in the credibility process to the valuation date.

Any adjustment for mortality improvement beyond the valuation date is discussed in section A10.4).

A10.4) Future Mortality Improvement

The mortality assumption resulting from the requirements of section A10.3) shall be adjusted for mortality improvements beyond the valuation date if such an adjustment would serve to increase the resulting Conditional Tail Expectation Amount. If such an adjustment would reduce the Conditional Tail Expectation Amount, such assumptions are permitted, but not required. In either case, the assumption must be based on current relevant data with a margin for uncertainty (increasing assumed rates of improvement if that results in a higher reserve, reducing them otherwise).

Actuarial Guideline XLIII

CARVM FOR VARIABLE ANNUITIES

Table of Contents

Section I	Background
Section II	Scope
Section III	Reserve Requirements
Section IV	Effective Date and Transition

Section I) Background

This Actuarial Guideline (Guideline) interprets the standards for the valuation of reserves for variable annuity and other contracts involving certain guaranteed benefits similar to those offered with variable annuities. The Guideline codifies the basic interpretation of the Commissioners Annuity Reserve Valuation Method (CARVM) by clarifying the assumptions and methodologies that will comply with the intent of the Standard Valuation Law. It also applies similar assumptions and methodologies to contracts that contain characteristics similar to those described in the scope, but that are not directly subject to CARVM.

In developing the Guideline, two regulatory sources provided guidance. First, the Standard Valuation Law defines CARVM as the greatest present value of future guaranteed benefits. Second, the NAIC Model Variable Annuity Regulation (VAR) states that the “reserve liability for variable annuities shall be established pursuant to the requirements of the Standard Valuation Law in accordance with actuarial procedures that recognize the variable nature of the benefits provided and any mortality guarantees.”

During 2019 this Guideline was amended to follow the reserve requirements provided in VM-21 of the *Valuation Manual*. This was done for uniformity for all coverages within scope regardless of whether they were issued prior to or on and after the operative date of the *Valuation Manual*. This was also done to reflect the extensive analysis carried out by the NAIC, Oliver Wyman consulting for the NAIC, and industry participants for improvements to the variable annuity framework.

Section II) Scope

- A) The Guideline applies to contracts, and product features on contracts, issued on or after January 1, 1981, and prior to the date that the *Valuation Manual* becomes effective in the applicable jurisdiction, whether directly written or assumed through reinsurance, falling into any of the following categories:
- 1) Variable deferred annuity contracts subject to the Commissioner’s Annuity Reserve Valuation Method (CARVM), whether or not such contracts contain Guaranteed Minimum Death Benefits (GMDBs), or Variable Annuity Guaranteed Living Benefits (VAGLBs);
 - 2) Variable immediate annuity contracts, whether or not such contracts contain GMDBs or VAGLBs;
 - 3) Group annuity contracts that are not subject to CARVM, but contain guarantees similar in nature¹ to GMDBs, VAGLBs, or any combination thereof; and

¹ The term “similar in nature,” as used in sections II(A)3) and II(A)4) is intended to capture both current products and benefits as well as product and benefit designs that may emerge in the future. Examples of the currently known designs are listed in footnote 2. Any product or benefit design that does not clearly fit the Scope should be evaluated on a case-by-case basis taking into consideration factors that include, but are not limited to, the nature of the guarantees, the definitions of GMDB and VAGLB in

- 4) All other products that contain guarantees similar in nature to GMDBs or VAGLBs, even if the insurer does not offer the mutual funds or variable funds to which these guarantees relate, where there is no other explicit reserve requirement.²

If such a benefit is offered as part of a contract that has an explicit reserve requirement and that benefit does not currently have an explicit reserve requirement:

- a) The Guideline shall be applied to the benefit on a standalone basis (i.e., for purposes of the reserve calculation, the benefit shall be treated as a separate contract);
 - b) The reserve for the underlying contract is determined according to the explicit reserve requirement; and
 - c) The reserve held for the contract shall be the sum of a) and b).
- B) The company may elect to apply these requirements to contracts and product features on contracts, whether directly written or assumed through reinsurance, falling into any of the categories defined in Section II.A. and issued prior to January 1, 1981.
- C) The Guideline does not apply to contracts falling under the scope of the NAIC Model Modified Guaranteed Annuity Regulation (Model #255); however, it does apply to contracts listed above that include one or more subaccounts containing features similar in nature to those contained in Modified Guaranteed Annuities (e.g., market value adjustments).
- D) Separate account annuity contracts that guarantee an index and do not offer GMDBs or VAGLBs are excluded from the scope of the Guideline.

Section III) Reserve Requirements

- A) Reserves shall be determined by following the requirements in VM-21 from the version of the NAIC *Valuation Manual* applicable for that valuation date. For purposes of determining reserves, at the election of the company, the contracts subject to this Guideline may be aggregated with the contracts subject to VM-21 of the *Valuation Manual*. Alternatively, the company may elect to not aggregate the contracts subject to this Guideline with those subject to VM-21 of the *Valuation Manual*, and value these as a separate group of contracts.
- B). The development of the reserves shall be documented following the requirements in VM-31 of the NAIC *Valuation Manual* applicable for that valuation date.

Section IV) Effective Date and Transition

- A) This Actuarial Guideline applies for valuations on or after January 1, 2020. The phase-in provisions of VM-21 also apply for the contracts and product features subject to the Guideline.

VM-01 and whether the contractual amounts paid in the absence of the guarantee are based on the investment performance of a market-value fund or market-value index (whether or not part of the company's separate account).

² For example, a group life contract that wraps a GMDB around a mutual fund would generally fall under the scope of the Guideline since there is not an explicit reserve requirement for this type of group life contract. However, for an individual variable life contract with a GMDB and a benefit similar in nature to a VAGLB, the Guideline would generally apply only to the VAGLB-type benefit, since there is an explicit reserve requirement that applies to the variable life contract and the GMDB.

- B) A company may elect to apply these requirements for the valuation on December 31, 2019, in lieu of the requirements of the prior version of this Guideline. If so elected, the reserves will be established by following the requirements of VM-21 from the 2020 NAIC *Valuation Manual* and the documentation requirements of VM-31 from the 2020 NAIC *Valuation Manual*.

Actuarial Guideline XLIV

GROUP TERM LIFE WAIVER OF PREMIUM DISABLED LIFE RESERVES

I. Background

Section 4.G. of the Standard Valuation Law establishes tables approved by the commissioner as the minimum standard for computing reserves for group life insurance and special benefits. The purpose of this Actuarial Guideline (Guideline) is to determine the minimum standard of valuation for group term life waiver of premium disabled life benefits and to recognize the 2005 Group Term Life Waiver (GTLW) Mortality and Recovery Tables.

Group term life policies do not maintain contract reserves beyond the duration of the policy issued to the group policyholder. However, some policies guarantee an extended death benefit to an individual insured who is disabled according to the terms of the policy. Thus, to the extent such guarantees are made, a disabled life reserve must be maintained for each individual that is so disabled. However, prior to the creation of this guideline, there has been no formal guidance regarding the calculation of these disabled life reserves.

II. Scope

This guideline applies to group term life certificates on individuals who become disabled on or after January 1, 2009. Based on the provisions of Section 4.G. of the Standard Valuation Law, companies may apply this to group term life certificates on individuals who became disabled prior to January 1, 2009, provided they obtain permission from the commissioner.

III. Definitions

“2005 GTLW Mortality Tables” means the mortality rate tables shown in Attachments A and B.

“2005 GTLW Recovery Tables” means the recovery rate tables shown in Attachments C and D.

IV. Text

A. Group Waiver of Premium Reserve Calculation

1. The minimum standard of valuation for group term life waiver of premium disabled life benefits shall be the present value of the death benefit payable discounted for interest and recovery. Since there is not a contract reserve based upon an aggregate table, the discounted value of waived premiums is inadequate to support this liability.
2. Except as provided in Section B, the 2005 GTLW Mortality and Recovery Tables shall be used for determining the minimum standard of valuation for any group term life waiver of premium disabled life benefit incurred on or after the effective date of this guideline. The valuation tables were derived from employer-employee group life experience. Other forms of group term life insurance are also subject to the same requirements if they contain similar extended death benefit provisions. Section B offers ways to modify the underlying rates of mortality or recovery if they differ from those associated with the underlying experience in the valuation table.
3. The maximum interest rate shall be the maximum rate permitted by law in the valuation of life insurance of the same guaranteed duration issued on the same

date as the claim incurral date of disability. This maximum interest rate shall be used for determining the minimum standard of valuation for any group term life waiver of premium disabled life benefit incurred on or after the effective date of this guideline. The guaranteed duration used to determine the life insurance rate of interest is equal to the largest term in years between the point at which any individual in the group may become disabled and the point at which no death benefit is available. Thus, if a person could become disabled at age 20, and remain disabled, and receive a benefit upon death before age 65, the guaranteed duration would be 45 years. For most groups and companies this would mean the maximum interest rate shall be the rate for life insurance with duration greater than 20 years.

B. Use of Company Experience

1. The Appointed Actuary shall review company experience at least once every five years. The review of company experience can range from a detailed experience study to a high level analysis. The extent of the review must be sufficient to enable the Appointed Actuary to defend any conclusion reached. Company experience shall:

- i. Be segmented into policies with similar benefits, on individuals of each gender;
- ii. Be experience-specific to the company;
- iii. Include all relevant experience in the past three most recent years;
- iv. Exclude experience that is not in the past six most recent years;
- v. Otherwise be relevant, in accordance with the professional judgment of the Appointed Actuary; and
- vi. Not be deemed irrelevant by the commissioner.

2. The commissioner may require a company to use its experience based upon the most recent review referenced in Section B.1 to establish its specific valuation tables if:

- i. Actual mortality experience is reasonably expected to be greater than 90% of the 2005 GTLW Mortality Tables; or
- ii. Actual recovery experience is reasonably expected to be less than 125% of the 2005 GTLW Recovery Tables.

Under these circumstances, the commissioner may require a company to use the process set out in Section B.4 and establish for the company a minimum value for Z.

3. A company may use its experience exclusively without reference to the standard tabular mortality expected experience or to the standard tabular recovery expected experience to create its specific valuation tables if:

- i. The Appointed Actuary can demonstrate and certify the following:

- a) The company-specific valuation tables are based on company experience with allowances for graduation and margins for adverse experience;
 - b) The company-specific mortality valuation tables used for computing minimum reserves for group term life waiver of premium benefits are such that there is at least an 85% statistical confidence that the actual annual aggregate mortality will be less than the mortality in the company-specific-mortality valuation tables; and
 - c) The company-specific recovery valuation tables used for computing minimum reserves for group term life waiver of premium benefits are such that there is at least an 85% statistical confidence that the actual annual aggregate recoveries will be greater than the recoveries in the company-specific recovery valuation tables.
- ii. The company has written permission from the domiciliary commissioner to use the company-specific valuation tables.
 - iii. Unless otherwise exempted or required, the specific valuation tables shall apply to the computation of minimum reserves for group term life waiver of premium disabled life benefits for claims incurred during or after the calendar year in which the study was performed.
 - iv. The company shall not use mortality and recovery tables with rates that produce reserves less than the reserves produced by using 75% of the 2005 GTLW Mortality Tables and 160% of the 2005 GTLW Recovery Tables for all durations of disability combined.
4. If not invoking Section B.3, a company may use a credibility-weighted combination of company mortality experience with the 2005 GTLW Mortality Tables and/or of company recovery experience with the 2005 GTLW Recovery Tables to create its specific valuation tables.
- i. The blended tables for each gender and type of experience (mortality and recovery) shall be computed using the formula $\text{Blended Table} = T \times S$, where:
 - a) Z shall be a credibility weighting factor, between 0 and 1, developed by the Appointed Actuary using credibility theory methods not unacceptable to the commissioner;
 - b) F shall be the ratio of the company's actual experience to the expected experience for the 2005 GTLW Mortality and Recovery Tables for each gender and type of experience (mortality and recovery);
 - c) M shall be 1.12 for mortality tables and 0.80 for recovery tables. The values provide a smooth transition between the 2005 tables and company experience when $Z = 1$;

- d) S shall be the 2005 GTLW Mortality and Recovery Tables; and
- e) T shall be computed using the following steps:

Step 1: Compute the raw value of $T = [Z \times (F \times M) + (1 - Z)]$.

Step 2: Round T to the nearest 5%.

Step 3: If the absolute difference between the T produced in step 2 and the value of T utilized immediately prior to the study is less than 10%, then set T equal to the value of T utilized immediately prior to the study.

Step 4: For all durations of disability, combined for each gender, set the value of T to the greater of 75% and the T resulting from step 3 for mortality and set the value of T to the lesser of 160% and the T resulting from step 3 for recovery.

- ii. The company has written permission from the domiciliary commissioner to use the blended valuation tables.
- iii. Unless otherwise exempted or required, the specific valuation tables shall apply to the computation of minimum reserves for group term life waiver of premium disabled life benefits for claims incurred during or after the calendar year in which the study was performed.

Actuarial Guideline XLV

THE APPLICATION OF THE STANDARD NONFORFEITURE LAW FOR LIFE INSURANCE TO CERTAIN POLICIES HAVING INTERMEDIATE CASH BENEFITS

Scope

This Guideline applies to individual life insurance policies, other than variable and non-variable adjustable life policies and current assumption whole life policies, that provide for an endowment benefit, materially less than the policy face amount, at a specified intermediate duration during a longer period of life insurance protection. The payment of such endowment benefit does not alter or eliminate any premiums or benefits scheduled for the period subsequent to the endowment date, nor does the policy automatically terminate upon payment of the endowment benefit. Policies that offer a return of premium endowment benefit may be considered a special case of the policies subject to this Guideline.

Background

In recent years a new category of life insurance products has emerged in the life insurance marketplace. These products offer a cash benefit at a specified time, typically many years prior to the coverage expiry date of the policy, conditioned on the insured being alive and the policy being in force at that time. The cash benefit has often taken the form of an intermediate period endowment that is either built into the policy or is provided through a rider or an endorsement. When the amount of the cash benefit is based upon the premiums paid into the policy, the benefit is often referred to as a return of premium benefit.

The straightforward application of Sections 3 and 5c of the Standard Nonforfeiture Law For Life Insurance (the Law), considering guaranteed benefits and premiums (whether guaranteed or indeterminate) during the entire period death benefits are guaranteed available under the policy, subject only to the payment of required premiums, can result in negative or very low cash values at all durations for these products. This is caused by high premiums assumed applicable in the later durations. This application of the Law produces unacceptable results, as it fails to recognize that the cash benefit should be prefunded with the premiums that fall due prior to the time the benefit becomes available.

The intent of this Guideline is to provide guidance with respect to the required minimum cash values for some of the products described in the Scope section. However, other products within the scope designed to provide similar benefits, and having similar premium structures (for example products having a cash value at the end of an initial level premium period equal to the total premiums paid) would be expected to provide minimum cash values that are determined in a manner consistent with this Guideline. For products with multiple endowment benefits, the minimum cash values should be determined in accordance with the principles of this Guideline.

Text

- A. The following methodology shall be used in the determination of minimum cash surrender values for policies subject to this Guideline in accordance with the requirements of the Law.
 1. The endowment period shall be that period of time measured from the issue date of the policy to the date when the endowment benefit becomes payable (the endowment date) under the terms of the policy.
 2. If the endowment benefit is added by rider to a policy, then for minimum cash value determination purposes the base policy and the endowment benefit are to be treated as integrated.

3. Premiums under the policy may be provided through a scale of guaranteed rates for the term of the policy or through a scale of current rates that are subject to a scale of guaranteed maximum premiums; if rates are subject to a scale of guaranteed maximum premiums, the minimum cash values shall be the greater of those produced under this Guideline using the guaranteed maximum rates and current rate scale applicable at issue of the policy.
4. Any cash surrender value available under the policy in the event of default in a premium payment due on any policy anniversary during the endowment period shall be an amount not less than the excess, if any, of the present value, on the anniversary, of the endowment benefit and any future incremental death benefits during the endowment period which would have been provided for by the policy if there had been no default, over the sum of:
 - (i) The then present value of the adjusted premiums as defined below corresponding to premiums which would have fallen due on and after the anniversary during the endowment period; and
 - (ii) The amount of any indebtedness to the company on the policy.
5. Incremental death benefits are death benefits during the endowment period in excess of the lowest death benefit provided under the policy during the endowment period.
6. The adjusted premiums for the policy shall be calculated on an annual basis and shall be such uniform percentage of the respective premiums specified in the policy for each policy year during the endowment period, excluding amounts payable as extra premiums to cover impairments or special hazards and also excluding any uniform annual contract charge or policy fee specified in the policy in a statement of the method to be used in calculating the cash surrender value and paid-up nonforfeiture benefits, that the present value, at the date of issue of the policy, of all adjusted premiums shall be equal to the sum of:
 - (i) The present value of the endowment benefit and any incremental death benefits provided for by the policy during the endowment period;
 - (ii) One percent (1%) of the average amount of insurance (total death benefit under the policy, including any incremental death benefits) at the beginning of each of the first ten policy years; and
 - (iii) One hundred twenty-five percent (125%) of the nonforfeiture net level premium as defined below, provided however, that no nonforfeiture net level premium shall be considered to exceed 4% of the average amount of insurance (total death benefit under the policy, including any incremental death benefits) at the beginning of each of the first ten policy years.
7. The nonforfeiture net level premium for the policy shall be equal to the present value, at the date of issue of the policy, of the endowment benefit and any incremental death benefits provided for by the policy during the endowment period, divided by the present value, at the date of issue of the policy, of an annuity of one per annum payable on the date of issue of the policy and on each anniversary of such policy on which a premium falls due prior to the endowment date.

8. The mortality rates and interest rate used in the determination of the minimum cash values for the policy shall be those applicable under the Law considering during the entire period death benefits are guaranteed available under the policy, subject only to the payment of required premiums.
- B. In no event can the cash surrender value under the policy at any duration be less than the greater of:
1. The minimum cash value calculated according to Section A of this Guideline; and
 2. The minimum cash value at the same duration resulting from the application of the methods described in Sections 3 and 5c of the Law considering guaranteed benefits and premiums (whether guaranteed or indeterminate) during the entire period death benefits are guaranteed available under the policy, subject only to the payment of required premiums. In performing this calculation, no annual premium at any duration after the endowment period shall exceed the difference between the death benefit and the cash value at that duration.
- C. The cash surrender values for the policy must also satisfy the consistency of progression of cash values test contained in Section 8 of the Law, considering guaranteed benefits and premiums (whether guaranteed or indeterminate) during the entire period death benefits are guaranteed available under the policy, subject only to the payment of required premiums.
- D. For policies where the benefit is defined in more general terms as providing for a return of premiums paid or a portion of premiums paid, the procedures of Subsection 5c C of the Law and the requirements of Section A above shall be applied in the determination of a revised set of minimum cash values in the event the value of the endowment benefit of the policy changes due to a change made to the premium schedule provided at issue.

Applicability

This Guideline is effective for all policy forms filed on or after January 1, 2009, and affects all contracts issued on or after January 1, 2010.

Actuarial Guideline XLVI

INTERPRETATION OF THE CALCULATION OF THE SEGMENT LENGTH WITH RESPECT TO THE LIFE INSURANCE POLICIES MODEL REGULATION UPON A CHANGE IN THE VALUATION MORTALITY RATES SUBSEQUENT TO ISSUE

I. Background

Some states have revised their regulation permitting the use of the 2001 CSO Preferred Class Structure Mortality Table so that at the company's option it might be used to value a policy on a plan which was previously approved for issue based on valuation using the 2001 CSO Mortality Table. A company making this election would be changing the valuation mortality rates. It is also the case that use of the 2001 CSO Preferred Class Structure Mortality Table is predicated upon the block of policies initially, and annually thereafter, satisfying certain requirements with respect to the present value of death benefits over certain future periods. If these requirements are not satisfied at some point in the future, the company must change to a table for which the requirements are satisfied. For example, this could mean changing from the super preferred nonsmoker table to the preferred nonsmoker table or maybe from the preferred smoker table to the smoker table. Although a non-elective change, this is also a change in the valuation mortality rates.

Section 4B of the Valuation of Life Insurance Policies Model Regulation defines the "Contract Segmentation Method" in which segments are to be calculated using the valuation mortality rates for deficiency reserves. Thus, potentially either of the two examples given above could trigger a recalculation of the valuation segments at the time the valuation mortality rates are changed. The purpose of this guideline is to prescribe which circumstances involving a change to the valuation mortality rates, require a recalculation of the segments and which do not.

The Valuation of Life Insurance Policies Model Regulation was adopted, in part, to stop the use of high net premiums late in the policy's life from unduly influencing the level of reserves early in the policy's life ("postfunding"). The contract segmentation method was the answer devised to control this. After the adoption of this regulation, companies incorporated the establishment of the segment lengths into the policy design process based on the valuation mortality expected to be used. Now it is seen that there are circumstances in which it may be necessary or desirable to change valuation mortality after issue. But if it triggers a segment recalculation then there could be unintended, undesirable results.

This guideline classifies the circumstances involved in changes to valuation mortality rates into two categories: those where deliberately designed postfunding is less likely so no segment recalculation is prescribed, and those where such postfunding is more possible so segment recalculation is required. In general, non-elective valuation mortality changes require no segment recalculation, while elective valuation mortality changes are divided into those on plans filed for approval before the adoption of this guideline and those filed after adoption. To preclude enhancing postfunding by changing valuation mortality after a plan is approved, recalculation of segments is required if the change is elected on plans filed after adoption of this guideline, but is not required for plans filed before.

II. Scope

This guideline is effective December 31, 2008.

III. Text

A. For policies subject to a non-elective change in valuation mortality rates:

For policies which were the subject of a non-elective change in valuation mortality rates because the requirements for continued use of the prior rates were no longer satisfied, Section 4B of the Valuation of Life Insurance Policies Model Regulation shall be interpreted so that the segments need not be recalculated.

B. For policies subject to a company election to substitute the 2001 Preferred Class Structure Table for the 2001 CSO Mortality Table:

1. For policies issued on a policy form filed for approval prior to January 1, 2009, Section 4B of the Valuation of Life Insurance Policies Model Regulation shall be interpreted so that the segments need not be recalculated.

2. For policies issued on a policy form filed for approval after January 1, 2009, Section 4B of the Valuation of Life Insurance Policies Model Regulation shall be interpreted to require that the segments be recalculated using the new valuation mortality rates.

Not for Distribution

Actuarial Guideline XLVII

THE APPLICATION OF COMPANY EXPERIENCE IN THE CALCULATION OF CLAIM RESERVES UNDER THE 2012 GROUP LONG-TERM DISABILITY VALUATION TABLE

I. Background

The 2012 Group Long-Term Disability (GLTD) Valuation Table, as included in the *Health Insurance Reserves Model Regulation* (#10), is the valuation standard to replace the Commissioner's Group Disability Table 1987 (CGDT87 Table) with a new one based on the GLTD 2008 Table. This table is referred to as the GLTD 2012 Valuation Table and can be found at the following location:

http://www.naic.org/documents/01_naic_2012_group_long-term_disability_valuation_table.xls

An actuarial guideline is more appropriate to handle the multiple segments of the 2012 GLTD Valuation Table, the computations of own experience and the application of credibility which are not normally found in model regulations.

II. Purpose

The purpose of this Actuarial Guideline is to provide an instruction for the use of the 2012 GLTD Valuation Table that is referenced in the *Health Insurance Reserves Model Regulation* (#10). This guideline pertains to Group Long-Term Disability claims consistent with the conditions defined in the model regulation, and governs the selection of claim termination rates for the purpose of calculating GLTD claim reserves. This guideline does not address reserve adequacy, which remains the concern of the insurer according to the terms expressed in the model regulation.

Although the various detailed formulas in this guideline do not directly address or define reserve adequacy, it is assumed that appropriate adequacy tests will be made periodically. Such adequacy testing is considered to be an additional tool for the actuary to make appropriate choices where leeway from any prescription made herein is allowed (A/E calculation, margin, etc.) so that the calculation of the reserve will generally be adequate and the actuary does not need to continually rely on other measures to achieve adequacy. In addition to the few times that leeway from prescription is mentioned below, nothing in this guideline should be assumed to prohibit the actuary from building a case and requesting permission from the state insurance commissioner for other appropriate variations. Many such situations, because they would apply to fully credible blocks of business and are intended for continual use, should be considered for approval by the commissioner for a period tied to the updates required by Section C.vi and not approved on an annual basis.

III. Text

A. When the insurer follows the instructions provided in this guideline, the selected claim termination rates automatically meet the minimum valuation standard defined in the model regulation.

B. Valuation Table Modifications

If not invoking the small company exception specified in Section D, a company must use a credibility-weighted combination of its own claim termination experience with the 2012 GLTD Valuation Table to create its specific valuation table.

i. For claims in Duration Group 1 (duration \leq 3 months), termination rates may be developed as below consistent with other Duration Groups or in any other

manner deemed appropriate by the actuary. With respect to credibility, any value between 0 and 1.0 that the actuary deems appropriate for the block may be used.

- ii. For claims beyond 3 months, the valuation termination rates shall be computed using the termination rates from the 2012 GLTD Valuation Table (S) multiplied by experience adjustment factors (T) that are calculated separately for four different duration groups.

$$\text{Valuation Termination Rate} = T \times S$$

The duration groups are defined as follows:

Group 2: duration > 3 months and duration \leq 24 months

Group 3: duration > 24 months and duration \leq 60 months

Group 4: duration > 60 months and duration \leq 120 months

Group 5: duration > 120 months

- a) S shall be the sum of recovery and death rates from the 2012 GLTD Valuation Table.
- b) T shall be computed as $T = [Z \times F * (1 - M) + (1 - Z)]$.
- 1) Z shall be a credibility weighting factor, between 0 and 1, developed for each duration group according to the following specifications:
Groups 2-5: $Z = \text{Min} \left(\sqrt{N/K}, 1 \right)$ N is the number of expected recovery and death counts from the 2012 GLTD Valuation Table.
- 2) K is a set of constants defined by duration group as follows:
Group 2: $K = 3,300$ Group 4: $K = 2,100$
Group 3: $K = 2,500$ Group 5: $K = 1,700$
- 3) F shall be the ratio of the company's actual total of recovery and death counts to the expected recovery and death counts for the 2012 GLTD Valuation Table for each duration group specified above.

If the actuary has reserve adequacy or other significant analysis that demonstrates in the development and use of Company Specific Experience (see Section C below) that an alternative measurement is deemed appropriate, such as:

- I. Use of some other weighting of claims (gross benefit, net benefit, etc.) that is not only appropriate for measuring A/E, but also is expected to generally produce reserves not less than those produced by using a claim count measurement.
- II. Use of an increased credibility factor Z if F is less than 1 to give the company experience more weight.

Then, a basis other than claim count may be used.

- 4) M is the company experience margin, determined for each duration group according to the following formula:

$$M = \text{Min} \left(15\%, \text{Max} \left(5\%, 3\% + 1.65 * \sqrt{A/C} \right) \right)$$

This is the minimum value for the definition of M prior to any reserve adequacy analysis. Adequacy tests and analysis of experience (sharpness of fluctuations, trends over the period of the termination rate study, changing claims practices, etc.) may indicate that a larger value of M may be more appropriate. If so, such a value is deemed appropriate.

- 5) A is a set of constants defined by duration group as follows:

Group 2: $A = 4.0$

Group 4: $A = 2.5$

Group 3: $A = 3.0$

Group 5: $A = 2.0$

- 6) C shall be the company's actual number of total recovery and death counts by duration group.

- iii. The company shall not use termination rates that produce total reserves for claims disabled for more than two years that are less than the reserves produced for these claims by computing T as $\underline{T} = 1.30$. If the Company Specific Experience, determined in Section C below, for Duration Group 3 includes at least 5,000 claim terminations, the value of T for that Duration Group shall not be limited to ≤ 1.30

C. Company Specific Experience—Own Experience Measurement

In computing values F and S to comply with Section B above, the appointed actuary shall:

- i. Segment the company claim termination experience into any major subgroups that may produce significantly different results (e.g., market niches, claims operations, unique benefit designs, etc.).
- ii. Combine affiliated statutory entities and assumed reinsurance, where claim management is under a common structure, when considering company experience. It is also appropriate to evaluate experience separately when specific blocks of company business have distinct claim management practices or significantly different risk characteristics.
- iii. Include all relevant experience the company is capable of providing for as many of the last five years as possible (not including the lag period described below). However, there are two situations where using other than a five-year period may be more appropriate. The first is when a company's experience in a longer period not only increases credibility but is still relevant and appropriate for the company's products and claim management practices. The second is for a company that has had significant changes in product and/or claim management practices within the past five years that has diminished the relevance of the company's experience early in the five-year period. In this second situation, less than five years of experience may be used for any duration band for which there is compelling logic and when either the company's experience to be used is at

least 90% credible, or the shorter experience period produces higher reserves than using five years.

- iv. Recognize a suitable lag period to allow for a full resolution of claim status. The lag period used in the 2008 GLTD Study was 12 months. However, the appointed actuary may use a different lag period based on his or her company experience. For example, company experience indicates that all changes after the selected lag period are negligible.
- v. Measure actual (A) to expected (E) terminations based on claim count (unless another weighting is deemed more appropriate, as mentioned in Section B(ii)(b)4), where the E is based on monthly expected recoveries and deaths from the 2012 GLTD Valuation Table. Claim count is also used in the measurement of credibility.
- vi. Update the minimum valuation basis in accordance with Section B above at least once every five years. In addition, the valuation basis also must be updated whenever the company's annual own experience study produces, in accordance with Section B, a value T that changes by more than 10% from the one used in the current valuation basis for any of the five duration groups.
- vii. Recognize where appropriate any flexibility built into the 2012 GLTD Valuation Table, such as not utilizing diagnosis-specific termination rates when the information is deemed unreliable.
- viii. Do not count as terminations those claims that are closed due to settlement (i.e., a lump sum replacing a series of potential future payments), or that have reached the end of the maximum benefit duration, or that are closed due to a contractual limit, such as a mental and nervous limit. For this purpose, a closure due to a change in definition of disability should be considered an actual termination and not a termination due to reaching the maximum benefit duration.
- ix. Use experience that is otherwise relevant in accordance with the professional judgment of the appointed actuary.
- x. Do not use experience that the commissioner has deemed inappropriate or likely to produce significantly inadequate reserves.

In the above paragraphs, the expression term "company" refers to a single company or a group of legally related companies subject to the same claim management.

D. Own Experience Measurement Exemption

If, at the time of valuation, a company has fewer than 50 open claims disabled within two years of the effective date of the valuation, and fewer than 200 open claims disabled more than two years prior to the effective date of the valuation, the carrier is exempt from the requirement that the 2012 GLTD Valuation Table be modified by the company's own experience. Open claims include only claims subject to valuation using the 2012 GLTD Valuation Table. Said company will use 100% of the 2012 Valuation Table for calculating claims termination rates in order to comply with the minimum valuation standard.

Actuarial Guideline XLVIII
(Applies to 2017 and Subsequent Year Valuations)

**ACTUARIAL OPINION AND MEMORANDUM REQUIREMENTS FOR THE REINSURANCE
OF POLICIES REQUIRED TO BE VALUED UNDER SECTIONS 6 AND 7 OF THE NAIC
VALUATION OF LIFE INSURANCE POLICIES MODEL REGULATION (MODEL #830)**

Background

The NAIC Principle-Based Reserving Implementation (EX) Task Force (“PBRI Task Force”) serves as the coordinating body for all NAIC technical groups involved with projects related to the Principle-Based Reserves (PBR) initiative for life and health policies. The PBRI Task Force was also charged with further assessing, and making recommendations regarding, the solvency implications of life insurance reserve financing mechanisms addressed in the June 6, 2013 NAIC White Paper of the Captives and Special Purpose Vehicle Use (E) Subgroup of the Financial Condition (E) Committee. Some of these reinsurance arrangements have been referred to as “XXX/AXXX Captive arrangements,” although not all such arrangements actually involve reinsurers organized as captives. In this connotation, XXX denotes the reserves prescribed by Section 6 of the NAIC *Valuation of Life Insurance Policies Model Regulation* (Model #830) while AXXX denotes the reserves prescribed by Section 7 of Model #830, and by *Actuarial Guideline XXXVIII—The Application of the Valuation of Life Insurance Policies Model Regulation* (AG 38). On June 30, 2014, the PBRI Task Force adopted a framework as found in Exhibits 1 and 2 of the June 4, 2014 report from Rector & Associates, Inc. (the “June 2014 Rector Report”). Exhibit 2 of the report included a charge to the Life Actuarial (A) Task Force (LATF) to develop a level of reserves (the “Required Level of Primary Security”) that must be supported by certain defined assets (“Primary Security”). The level of reserves is to be calculated by a method referred to as the “Actuarial Method.” Another charge to LATF was to promulgate an actuarial guideline specifying that, in order to comply with the NAIC *Actuarial Opinion and Memorandum Regulation*, Model 822 (“AOMR”) as it relates to XXX/AXXX reinsurance arrangements, the opining actuary must issue a qualified opinion as to the ceding insurer’s reserves if the ceding insurer or any insurer in its holding company system has engaged in a XXX/AXXX reserve financing arrangement that does not adhere to the Actuarial Method and Primary Security forms adopted by the NAIC. The initial version of *Actuarial Guideline XLVIII—Actuarial Opinion and Memorandum Requirements for the Reinsurance of Policies Required to be Valued under Sections 6 and 7 of the NAIC Valuation of Life Insurance Policies Model Regulation* (AG 48) was developed in response to that charge, with an effective date of January 1, 2015.

Coordination between this Actuarial Guideline and the NAIC Term and Universal Life Insurance Reserve Financing Model Regulation (Model #787)

Subsequently, on January 8, 2016, the NAIC adopted revisions to the *Credit for Reinsurance Model Law* (Model #785). Among other things, the revisions to Model #785 provide commissioners with the authority to enact, by regulation, additional requirements for ceding insurers to claim credit for reinsurance with respect to certain XXX/AXXX financing arrangements. On December 13, 2016, the NAIC adopted the *Term and Universal Life Insurance Reserve Financing Model Regulation* (Model #787) as the regulation permitted by Model #785. LATF subsequently received a charge to redraft AG 48 to make it as consistent as possible with the provisions of Model #787. The current version of this actuarial guideline is the result.

The following is an overview of the interrelationship between this actuarial guideline and Model #787, and the regulatory strategy that led to the adoption of each:

1. The initial version of this actuarial guideline immediately established national standards for the use of XXX/AXXX financing arrangements in an attempt to quickly set minimum standards based on the framework adopted by the PBRI Task Force on June 30, 2014. This initial version applied to such reinsurance arrangements entered into on or after 1/1/2015.

2. The revised statute (the NAIC *Credit for Reinsurance Model Law* (Model #785)) and a new regulation (the NAIC *Term and Universal Life Insurance Reserve Financing Model Regulation* (Model #787)) were then developed and adopted by the NAIC.
3. Except as noted in #4 below, this actuarial guideline will cease to be effective, on a state by state basis, as individual states enact Model #785 and adopt Model #787 to replace it.
4. Notwithstanding, it is anticipated that in a small number of states, Model #787 will need to be adopted on a “prospective” basis only (that is, it will only apply to ceded policies issued on or after the effective date thereof). In those cases, this actuarial guideline will remain as the authority for ceded policies subject to this actuarial guideline but to which Model #787, as adopted in a given state, does not apply. So although its role might diminish, this actuarial guideline will remain an essential part of the regulatory framework for a small number of states for many years to come.
5. To ensure uniformity of treatment between states, companies, and ceded policies (whether governed by this actuarial guideline or by Model #787) and to avoid confusion, this actuarial guideline is being updated, effective as of January 1, 2017, to make it as substantively identical to Model #787 as possible.

Authority, Avoidance, and Purpose

The requirements in this actuarial guideline derive authority from Section 3 of the AOMR, or, after the Operative Date of the *Valuation Manual*, from Section 1 of VM-30 of the *Valuation Manual*. Both Section 3 of the AOMR and Section 1 of VM-30 provide that the commissioner has the authority to specify specific methods of actuarial analysis and actuarial assumptions when, in the commissioner's judgment, these specifications are necessary for an acceptable opinion to be rendered relative to the adequacy of reserves and related items. As contained in the framework adopted by the PBRI Task Force on June 30, 2014, this actuarial guideline defines new terms, such as Primary Security and Required Level of Primary Security, specifies the Actuarial Method used to calculate the Required Level of Primary Security, and specifies other requirements that must be followed when reinsurance is involved in order for the appointed actuary to render an actuarial opinion that is not qualified.

No statute, regulation or guideline can anticipate every potential XXX/AXXX captive arrangement. Common sense and professional responsibility are needed to assure not only that the text of this actuarial guideline is strictly observed, but also that its purpose and intent are honored scrupulously. To that end, and to provide documentation to the appointed actuary as to the arrangements that are subject to review under this actuarial guideline, the appointed actuary may request from each ceding insurer, and may rely upon, the certification by the Chief Financial Officer or other responsible officer of each ceding insurer filed with the insurer's domiciliary regulator that the insurer has not engaged in any arrangement or series of arrangements involving XXX or AXXX reserves that are designed to exploit a perceived ambiguity in, or to violate the purpose and intent of, this actuarial guideline.

The purpose and intent of this actuarial guideline is to establish uniform, national standards governing XXX or AXXX reserve financing arrangements¹ in conformity with the PBRI Task Force framework and, in connection with such arrangements, to ensure that Primary Security, in an amount at least equal to the Required Level of Primary Security, is held by or on behalf of the ceding insurer. As described further in Section 4.B., the provisions of this actuarial guideline are not intended to apply to policies that were issued prior to 1/1/2015 if those policies were included in a captive reserve financing arrangement as of 12/31/2014. Further, the requirements of this actuarial guideline should be viewed as minimum standards and are not a substitute for the diligent analysis of reserve financing arrangements by regulators. A regulator should impose requirements in addition to those set out in this actuarial guideline if the facts and circumstances warrant such action.

Text

1. Authority

Pursuant to Section 3 of the AOMR or, after the Operative Date of the *Valuation Manual*, to Section 1 of VM-30 of the *Valuation Manual*, the commissioner shall have the authority to specify specific methods of actuarial analysis and actuarial assumptions when, in the commissioner's judgment, these specifications are necessary for an acceptable opinion to be rendered relative to the adequacy of reserves and related items.

2. Scope

This actuarial guideline applies to reinsurance contracts that cede liabilities pertaining to Covered Policies as that term is defined in Section 4.

3. Exemptions

This actuarial guideline does not apply to the situations described in Subsections A through F.

A. Reinsurance of:

- (1) Policies that satisfy the criteria for exemption set forth in Section 6F or Section 6G of Model #830; and which are issued before the later of:
 - (a) The effective date of Model #787 in the state of domicile of the ceding insurer, and
 - (b) The date on which the ceding insurer begins to apply the provisions of VM-20 to establish the ceded policies' statutory reserves, but in no event later than January 1, 2020;
- (2) Portions of policies that satisfy the criteria for exemption set forth in Section 6E of Model #830 and which are issued before the later of:

¹ In general, reserve financing arrangements are those where the security/assets backing part or all of the reserves have one or more of the following characteristics: such security/assets (1) are issued by the ceding insurer or its affiliates; and/or (2) are not unconditionally available to satisfy the general account obligations of the ceding insurer; and/or (3) create a reimbursement, indemnification or other similar obligation on the part of the ceding insurer or any of its affiliates (other than a payment obligation under a derivative contract acquired in the normal course and used to support and hedge liabilities pertaining to the actual risks in the policies ceded pursuant to the reinsurance arrangement).

- (a) The effective date of Model #787 in the state of domicile of the ceding insurer, and
 - (b) The date on which the ceding insurer begins to apply the provisions of VM-20 to establish the ceded policies' statutory reserves, but in no event later than January 1, 2020;
- (3) Any universal life policy that meets all of the following requirements:
- (a) Secondary guarantee period, if any, is five (5) years or less;
 - (b) Specified premium for the secondary guarantee period is not less than the net level reserve premium for the secondary guarantee period based on the CSO valuation tables and valuation interest rate applicable to the issue year of the policy; and
 - (c) The initial surrender charge is not less than one hundred percent (100%) of the first year annualized specified premium for the secondary guarantee period;
- (4) Credit life insurance;
- (5) Any variable life insurance policy that provides for life insurance, the amount or duration of which varies according to the investment experience of any separate account or accounts; or
- (6) Any group life insurance certificate unless the certificate provides for a stated or implied schedule of maximum gross premiums required in order to continue coverage in force for a period in excess of one year; or
- B. Reinsurance ceded to an assuming insurer that meets the applicable requirements of Section 2D of Model #785; or
- C. Reinsurance ceded to an assuming insurer that meets the applicable requirements of Sections 2A, 2B or 2C, of Model #785, and that, in addition:
- (1) Prepares statutory financial statements in compliance with the NAIC *Accounting Practices and Procedures Manual*, without any departures from NAIC statutory accounting practices and procedures pertaining to the admissibility or valuation of assets or liabilities that increase the assuming insurer's reported surplus and are material enough that they need to be disclosed in the financial statement of the assuming insurer pursuant to *Statement of Statutory Accounting Principles No. 1—Accounting Policies, Risks & Uncertainties and Other Disclosures* ("SSAP No. 1"); and
 - (2) Is not in a Company Action Level Event, Regulatory Action Level Event, Authorized Control Level Event, or Mandatory Control Level Event as those terms are defined in the NAIC *Risk-Based Capital (RBC) for Insurers Model Act* (Model #312) when its RBC is calculated in accordance with the life risk-based capital report including overview and instructions for companies, as the same may be amended by the NAIC from time to time, without deviation; or

- D. Reinsurance ceded to an assuming insurer that meets the applicable requirements of Sections 2A, 2B or 2C, of Model #785, and that, in addition:
- (1) Is not an affiliate, as that term is defined in Section 1A of the NAIC *Insurance Holding Company System Regulatory Model Act* (Model #440), of:
 - (a) The insurer ceding the business to the assuming insurer; or
 - (b) Any insurer that directly or indirectly ceded the business to that ceding insurer;
 - (2) Prepares statutory financial statements in compliance with the NAIC *Accounting Practices and Procedures Manual*;
 - (3) Is both:
 - (a) Licensed or accredited in at least 10 states (including its state of domicile), and
 - (b) Not licensed in any state as a captive, special purpose vehicle, special purpose financial captive, special purpose life reinsurance company, limited purpose subsidiary, or any other similar licensing regime; and
 - (4) Is not, or would not be, below 500% of the Authorized Control Level RBC as that term is defined in Model #312 when its risk-based capital (RBC) is calculated in accordance with the life risk-based capital report including overview and instructions for companies, as the same may be amended by the NAIC from time to time, without deviation, and without recognition of any departures from NAIC statutory accounting practices and procedures pertaining to the admission or valuation of assets or liabilities that increase the assuming insurer's reported surplus; or
- E. Reinsurance ceded to an assuming insurer that meets the requirements of either Section 5B(4)(a) of Model #785, pertaining to certain certified reinsurers or Section 5B(4)(b) of Model #785, pertaining to reinsurers meeting certain threshold size and licensing requirements; or
- F. Reinsurance not otherwise exempt under Subsections A through E if the commissioner, after consulting with the NAIC Financial Analysis Working Group (FAWG) or other group of regulators designated by the NAIC, as applicable, determines under all the facts and circumstances that all of the following apply:
- (1) The risks are clearly outside of the intent and purpose of this actuarial guideline (as described in the Authority, Avoidance and Purpose section above);
 - (2) The risks are included within the scope of this actuarial guideline only as a technicality; and
 - (3) The application of this actuarial guideline to those risks is not necessary to provide appropriate protection to policyholders. The commissioner shall publicly disclose any decision made pursuant to this Section 3F to exempt a reinsurance

treaty from this actuarial guideline, as well as the general basis therefor (including a summary description of the treaty).

Drafting Note: *The exemption set forth in Section 3F was added to address the possibility of unforeseen or unique transactions. This exemption exists because the NAIC recognizes that foreseeing every conceivable type of reinsurance transaction is impossible; that in rare instances unanticipated transactions might get caught up in this actuarial guideline purely as a technicality; and that regulatory relief in those instances may be appropriate. The example that was given at the time this exemption was developed pertained to bulk reinsurance treaties where the ceding insurer was exiting the type of business ceded. The exemption should not be used with respect to so-called “normal course” reinsurance transactions; rather, such transactions should either fit within one of the standard exemptions set forth in Sections 3A, B, C, D, or E or meet the substantive requirements of this actuarial guideline.*

4. Definitions

- A. “Actuarial Method” means the methodology used to determine the Required Level of Primary Security, as described in Section 5.
- B. “Covered Policies” means the following: Subject to the exemptions described in Section 3, Covered Policies are those policies, other than Grandfathered Policies, of the following policy types:
- (1) Life insurance policies with guaranteed nonlevel gross premiums and/or guaranteed nonlevel benefits, except for flexible premium universal life insurance policies; or,
 - (2) Flexible premium universal life insurance policies with provisions resulting in the ability of a policyholder to keep a policy in force over a secondary guarantee period.
- Note: Although “Covered Policies” is defined to include all the policies described in Subsections B1 and B2 above, it is noted that whether a given “Covered Policy” is subject to this actuarial guideline or, instead, to Model #787 should be determined under Section 8 (Sunset).*
- C. “Grandfathered Policies” means policies of the types described in Subsections B1 and B2 above that were:
- (1) Issued prior to January 1, 2015; and
 - (2) Ceded, as of December 31, 2014, as part of a reinsurance treaty that would not have met one of the exemptions set forth in Section 3 had that section then been in effect.
- D. “Non-Covered Policies” means any policy that does not meet the definition of Covered Policies, including Grandfathered Policies.
- E. “Required Level of Primary Security” means the dollar amount determined by applying the Actuarial Method to the risks ceded with respect to Covered Policies, but not more than the total reserve ceded.

- F. “Primary Security” means the following forms of security:
- (1) Cash meeting the requirements of Section 3A of Model #785;
 - (2) Securities listed by the Securities Valuation Office meeting the requirements of Section 3B of Model #785, but excluding any synthetic letter of credit, contingent note, credit-linked note or other similar security that operates in a manner similar to a letter of credit, and excluding any securities issued by the ceding insurer or any of its affiliates; and
 - (3) For security held in connection with funds-withheld and modified coinsurance reinsurance treaties:
 - (a) Commercial loans in good standing of CM3 quality and higher;
 - (b) Policy Loans; and
 - (c) Derivatives acquired in the normal course and used to support and hedge liabilities pertaining to the actual risks in the policies ceded pursuant to the reinsurance treaty.
- G. “Other Security” means any security acceptable to the commissioner other than security meeting the definition of Primary Security.
- H. “*Valuation Manual*” means the valuation manual adopted by the NAIC as described in Section 11B(1) of the Standard Valuation Law, with all amendments adopted by the NAIC that are effective for the financial statement date on which credit for reinsurance is claimed.
- I. “VM-20” means “Requirements for Principle-Based Reserves for Life Products,” including all relevant definitions, from the *Valuation Manual*.

5. The Actuarial Method

A. Description of Actuarial Method

The Actuarial Method to establish the Required Level of Primary Security for each reinsurance treaty subject to this actuarial guideline shall be VM-20, applied on a treaty-by-treaty basis, including all relevant definitions, from the *Valuation Manual* as then in effect, applied as follows:

- (1) For Covered Policies described in Section 4B(1) above, the Actuarial Method is the greater of the Deterministic Reserve or the Net Premium Reserve (NPR) regardless of whether the criteria for exemption testing can be met. However, if the Covered Policies do not meet the requirements of the Stochastic Reserve exclusion test in the *Valuation Manual*, then the Actuarial Method is the greatest of the Deterministic Reserve, the Stochastic Reserve, or the NPR. In addition, if such Covered Policies are reinsured in a reinsurance treaty that also contains Covered Policies described in Section 4B(2) above, the ceding insurer may elect to instead use paragraph 2 below as the Actuarial Method for the entire reinsurance agreement. Whether Paragraph 1 or 2 are used, the Actuarial Method must comply with any requirements or restrictions that the *Valuation Manual* imposes when aggregating these policy types for purposes of principle-based

reserve calculations. The mortality basis for the NPR shall be the 2017 CSO Mortality Table.

- (2) For Covered Policies described in Section 4B(2) above, the Actuarial Method is the greatest of the Deterministic Reserve, the Stochastic Reserve, or the NPR regardless of whether the criteria for exemption testing can be met. The mortality basis for the NPR shall be the 2017 CSO Mortality Table.
- (3) Except as provided in Paragraph (4) below, the Actuarial Method is to be applied on a gross basis to all risks with respect to the Covered Policies as originally issued or assumed by the ceding insurer.
- (4) If the reinsurance treaty cedes less than one hundred percent (100%) of the risk with respect to the Covered Policies then the Required Level of Primary Security may be reduced as follows:
 - (a) If a reinsurance treaty cedes only a quota share of some or all of the risks pertaining to the Covered Policies, the Required Level of Primary Security, as well as any adjustment under Subparagraph (c) below, may be reduced to a pro rata portion in accordance with the percentage of the risk ceded;
 - (b) If the reinsurance treaty in a non-exempt arrangement cedes only the risks pertaining to a secondary guarantee, the Required Level of Primary Security may be reduced by an amount determined by applying the Actuarial Method on a gross basis to all risks, other than risks related to the secondary guarantee, pertaining to the Covered Policies, except that for Covered Policies for which the ceding insurer did not elect to apply the provisions of VM-20 to establish statutory reserves, the Required Level of Primary Security may be reduced by the statutory reserve retained by the ceding insurer on those Covered Policies, where the retained reserve of those Covered Policies should be reflective of any reduction pursuant to the cession of mortality risk on a yearly renewable term basis in an exempt arrangement;
 - (c) If a portion of the Covered Policy risk is ceded to another reinsurer on a yearly renewable term basis in an exempt arrangement, the Required Level of Primary Security may be reduced by the amount resulting by applying the Actuarial Method including the reinsurance section of VM-20 to the portion of the Covered Policy risks ceded in the exempt arrangement, except that for Covered Policies issued prior to Jan 1, 2017, this adjustment is not to exceed $[c_x / (2 * \text{number of reinsurance premiums per year})]$ where c_x is calculated using the same mortality table used in calculating the Net Premium Reserve; and
 - (d) For any other treaty ceding a portion of risk to a different reinsurer, including but not limited to stop loss, excess of loss and other non-proportional reinsurance treaties, there will be no reduction in the Required Level of Primary Security.

It is possible for any combination of Subparagraphs (a), (b), (c), and (d) above to apply. Such adjustments to the Required Level of Primary Security will be done in the sequence that accurately reflects the portion of the risk ceded via the treaty.

The ceding insurer should document the rationale and steps taken to accomplish the adjustments to the Required Level of Primary Security due to the cession of less than one hundred percent (100%) of the risk.

The Adjustments for other reinsurance will be made only with respect to reinsurance treaties entered into directly by the ceding insurer. The ceding insurer will make no adjustment as a result of a retrocession treaty entered into by the assuming insurers.

- (5) In no event will the Required Level of Primary Security resulting from application of the Actuarial Method exceed the amount of statutory reserves ceded.
- (6) If the ceding insurer cedes risks with respect to Covered Policies, including any riders, in more than one reinsurance treaty subject to this actuarial guideline, in no event will the aggregate Required Level of Primary Security for those reinsurance treaties be less than the Required Level of Primary Security calculated using the Actuarial Method as if all risks ceded in those treaties were ceded in a single treaty subject to this actuarial guideline.
- (7) If a reinsurance treaty subject to this actuarial guideline cedes risk on both Covered and Non-Covered Policies:
 - (a) The Actuarial Method shall be used to determine the Required Level of Primary Security for the Covered Policies; and
 - (b) Any Primary Security and/or Other Security used to meet any requirements pertaining to the Non-Covered Policies may not be used to satisfy any requirements related to the Required Level of Primary Security and/or Other Security for the Covered Policies.

B. Valuation Used for Purposes of Calculations

For the purposes of both calculating the Required Level of Primary Security pursuant to the Actuarial Method and determining the amount of Primary Security and Other Security, as applicable, held by or on behalf of the ceding insurer, the following shall apply:

- (1) For assets, including any such assets held in trust, that would be admitted under the NAIC *Accounting Practices and Procedures Manual* if they were held by the ceding insurer, the valuations are to be determined according to statutory accounting procedures as if such assets were held in the ceding insurer's general account and without taking into consideration the effect of any prescribed or permitted practices; and
- (2) For all other assets, the valuations are to be those that were assigned to the assets for the purpose of determining the amount of reserve credit taken. In addition, the asset spread tables and asset default cost tables required by VM-20 shall be included in the Actuarial Method if adopted by the NAIC's Life Actuarial (A) Task Force no later than the December 31 on or immediately preceding the valuation date for which the Required Level of Primary Security is being

calculated. The tables of asset spreads and asset default costs shall be incorporated into the Actuarial Method in the manner specified in VM-20.

6. Required Actuarial Analysis and Actuarial Opinion and Memorandum Requirements

A. Required Actuarial Analysis

Before the due date of each actuarial opinion, as to each reinsurance treaty in which Covered Policies have been ceded, the appointed actuary of each ceding insurer must perform an analysis on a treaty by treaty basis, of such Covered Policies to determine whether, as of the immediately preceding December 31 (the valuation date):

- (1) Funds consisting of Primary Security, in an amount at least equal to the Required Level of Primary Security, are held by or on behalf of the ceding insurer, as security under the reinsurance treaty within the meaning of Section 3 of Model #785, on a funds withheld, trust, or modified coinsurance basis; and
- (2) Funds consisting of Other Security, in an amount at least equal to any portion of the statutory reserves as to which Primary Security is not held pursuant to Paragraph (1) above, are held by or on behalf of the ceding insurer as security under the reinsurance treaty within the meaning of Section 3 of Model #785; and

Note: For the sake of clarity, funds consisting of Primary Security pursuant to Paragraphs (1) may exceed the Required Level of Primary Security, and Other Security is only required under Paragraph (2) to the extent that there is any portion of the statutory reserves as to which Primary Security is not so held. For example, if a ceding insurer's statutory reserves equal \$1 Billion, its Required Level of Primary Security is \$600 Million, and it holds \$1 Billion in Primary Security pursuant to Paragraph (1), no Other Security is required under Paragraph (2).

- (3) Any trust used to satisfy the requirements of this Section 6 complies with all of the conditions and qualifications of Section 11 of the NAIC *Credit for Reinsurance Model Regulation* (Model #786), except that:
 - (a) Funds consisting of Primary Security or Other Security held in trust, shall for the purposes identified in Section 5B, be valued according to the valuation rules set forth in Section 5B, as applicable; and
 - (b) There are no affiliate investment limitations with respect to any security held in such trust if such security is not needed to satisfy the requirements of Section 6A(1); and
 - (c) The reinsurance treaty must prohibit withdrawals or substitutions of trust assets that would leave the fair market value of the Primary Security within the trust (when aggregated with Primary Security outside the trust that is held by or on behalf of the ceding insurer in the manner required by Section 6A(1)) below 102% of the level required by Section 6A(1) at the time of the withdrawal or substitution.

B. Qualified Actuarial Opinion; Remediation

- (1) The appointed actuary of the ceding insurer performing the analysis required by Section 6A above must issue a qualified actuarial opinion as described in Section 6.D. of the AOMR or Section 3A(10) of VM-30 of the *Valuation Manual*, as applicable, unless:

- (a) The requirements of Section 6A(1) and 6(A)(2) were fully satisfied as of the valuation date as to such reinsurance treaty; or
 - (b) Any deficiency has been eliminated before the due date of the Annual Statement to which the valuation date relates through the addition of Primary Security and/or Other Security, as the case may be, in such amount and in such form as would have caused the requirements of Section 6A(1) and 6A(2) to be fully satisfied as of the valuation date; or
 - (c) The ceding insurer has established a liability equal to the excess of the credit for reinsurance taken over the amount of Primary Security actually held pursuant to Section 6A(1).
- (2) In addition to the requirement set forth in Section 6B(1) above, the appointed actuary of the ceding insurer performing the analysis required by Section 6A above must issue a qualified actuarial opinion as described in Section 6.D. of the AOMR or Section 3A(10) of VM-30 of the *Valuation Manual*, as applicable, if the appointed actuary for any affiliated reinsurer of the ceding insurer issues a qualified actuarial opinion with respect to such affiliated reinsurer where (a) the affiliate reinsures Covered Policies of the ceding insurer and (b) the qualified actuarial opinion pertaining to the affiliated reinsurer results, in whole or in part, from the analysis required by this actuarial guideline.

Note: The remediation option set forth in Section 6B(1)(c) mirrors that set forth in Model #787. Under this option, a ceding company may choose to avoid the consequence (a qualified opinion under this actuarial guideline) by establishing a liability equal to the excess of the credit for reinsurance taken over the amount of Primary Security actually held. For example, suppose a ceding insurer has established statutory reserves of \$1 Billion and has Primary Security of \$550 Million and Other Security of \$450 Million. Suppose further that the actuary determines that the insurer's Required Level of Primary Security is \$600 Million. Under Section 6B(1)(c), the insurer may avoid a qualified opinion by establishing a liability equal to \$450 Million (the difference between the statutory reserve of \$1 Billion and the \$550 Million amount of Primary Security actually held).

- C. Additional Requirements for the Actuarial Opinion and Memorandum for Companies that have Covered Policies Requiring the Analysis Pursuant to this actuarial guideline
- (1) In the statement of actuarial opinion, the appointed actuary of the ceding insurer must state whether (i) he has performed an analysis, as to each reinsurance arrangement under which Covered Policies have been ceded, of the security supporting the Covered Policies and whether funds consisting of Primary Security in an amount at least equal to the Required Level of Primary Security are held by or on behalf of the ceding insurer, as security under the reinsurance contract, on a funds withheld, trust, or modified coinsurance basis and (ii) funds consisting of Primary Security or Other Security in an amount equal to the statutory reserves are held by or on behalf of the ceding insurer as security under the reinsurance arrangement.
 - (2) In the actuarial memorandum as described by Section 7 of the AOMR or Section 3B of VM-30 of the *Valuation Manual*, as applicable, the appointed actuary of the ceding insurer must document the analysis and requirements applied by this actuarial guideline as to each reinsurance arrangement under which Covered Policies are ceded.

- (3) In the event that a reinsurance treaty contains both (1) Covered Policies subject to this actuarial guideline rather than to Model #787, and (2) Covered Policies subject to Model #787 rather than to this actuarial guideline, the treaty shall be tested as a whole for purposes of a ceding insurer's compliance with both (a) the requirements of Section 6A(1) and Section 6A(2) of this actuarial guideline and (b) the requirements of Section 7A(3) and Section 7A(4) of Model #787; provided further, that:
- (a) If funds consisting of Primary Security are held in amounts less than the Required Level of Primary Security, such funds consisting of Primary Security shall be allocated first to fulfill the Required Level of Primary Security for the Covered Policies subject to this actuarial guideline, with any remainder allocated to those Covered Policies subject to Model #787; and
 - (b) If funds consisting of Other Security are held in amounts less than the requirements of Section 6A(2), such funds consisting of Other Security shall be allocated first to fulfill the Other Security requirements for the Covered Policies subject to this actuarial guideline, and any remainder shall be allocated to those Covered Policies subject to Model #787.

7. Effective Date

This actuarial guideline shall become effective as of January 1, 2017 with respect to all Covered Policies. This actuarial guideline supersedes and replaces all previous versions thereof with respect to actuarial opinions rendered as to valuation periods ending on or after January 1, 2017.

Note: For the avoidance of doubt, actuarial opinions issued with respect to the year ended December 31, 2016, shall be governed by the version of AG 48 in effect on December 31, 2016, as included in the Accounting Practices and Procedures Manual.

8. Sunset Provision

This actuarial guideline shall cease to apply as to Covered Policies that are both (a) issued by ceding insurers domiciled in a jurisdiction that has in effect, as of December 31st¹ of the calendar year immediately preceding the year in which the actuarial opinion is to be filed, a regulation substantially similar to Model #787 adopted by the NAIC on December 13, 2016; and (b) subject to Model #787 as so adopted by the ceding insurer's jurisdiction of domicile. This Actuarial Guideline shall continue to apply, without interruption, to any and all Covered Policies not included in both (a) and (b) of the immediate preceding sentence.

*Note: It is anticipated that, for most states, this actuarial guideline will sunset pursuant to (a) and (b) of Section 8 and will continue only with respect to the limited number of states in which their version of Model #787 applies prospectively only, i.e., applies only to Covered Policies issued on or after the effective date of their version of Model #787. It is anticipated, however, that most states will be able to adopt a version of Model #787 that, like the Model itself, applies to all Covered Policies (subject to the applicable exemptions and grandfathering provisions) that are "in force" on or after the effective date, even if the policies were originally issued prior to that effective date. The goal of Section 8 is to ensure that **all** Covered Policies ceded in reinsurance transactions within the scope of this actuarial guideline continue to be subject to this actuarial guideline unless and until they become subject to Model #787.*

Actuarial Guideline XLIX

THE APPLICATION OF THE LIFE ILLUSTRATIONS MODEL REGULATION TO POLICIES WITH INDEX-BASED INTEREST

Background

The *Life Insurance Illustrations Model Regulation* (#582) was adopted by the NAIC in 1995. Since that time there has been continued evolution in product design, including the introduction of benefits that are tied to an external index or indices. Although these policies are subject to Model #582, not all of their features are explicitly referenced in the model, resulting in a lack of uniform practice in its implementation. In the absence of uniform guidance, two illustrations that use the same index and crediting method often illustrated different credited rates. The lack of uniformity can be confusing to potential buyers and can cause uncertainty among illustration actuaries when certifying compliance with Model #582.

This guideline provides uniform guidance for policies with index-based interest. In particular, this guideline:

- (1) Provides guidance in determining the maximum crediting rate for the illustrated scale and the earned interest rate for the disciplined current scale.
- (2) Limits the policy loan leverage shown in an illustration.
- (3) Requires additional consumer information (side-by-side illustration and additional disclosures) that will aid in consumer understanding.

Text

1. Effective Date

This Actuarial Guideline shall be effective as follows:

- i. Sections 4 and 5 shall be effective for all new business and in force life insurance illustrations on policies sold on or after September 1, 2015.
- ii. Effective March 1, 2017, Section 4 and Section 5 shall be effective for all in-force life insurance illustrations on policies within the scope of this Actuarial Guideline, regardless of the date the policy was sold.
- iii. Sections 6 and 7 shall be effective for all new business and in force life insurance illustrations on policies sold on or after March 1, 2016.
- iv. This actuarial guideline shall not apply for any new business or in force life insurance illustration on policies sold on or after December 14, 2020.
- v. Notwithstanding part iv of this section, an insurer may choose to utilize AG 49-A guidance for new illustrations on policies sold prior to the effective date of AG 49-A provided that, 1) the insurer utilizes AG 49-A guidance for all new product illustrations subject to AG 49, and 2) the insurer does not revert back to the AG 49 guidance.

2. Scope

This Actuarial Guideline shall apply to any life insurance illustration that meets both (i) and (ii) below:

- i. The policy is subject to Model #582.
 - ii. Interest credits are linked to an external index or indices.
3. Definitions
- A. **Alternate Scale:** A scale of non-guaranteed elements currently being illustrated such that:
- i. The credited rate for each Index Account does not exceed the lesser of the maximum credited rate for the illustrated scale less 100 basis points and the credited rate for the Fixed Account. If the insurer does not offer a Fixed Account with the illustrated policy, the credited rate for each Index Account shall not exceed the average of the maximum credited rate for the illustrated scale and the guaranteed credited rate for that account. However, the credited rate for each Index Account shall never be less than the guaranteed credited rate for that account.
 - ii. If the illustration includes a loan, the illustrated rate credited to the loan balance does not exceed the illustrated loan charge.
 - iii. All other non-guaranteed elements are equal to the non-guaranteed elements for the illustrated scale.
- B. **Benchmark Index Account:** An Index Account with the following features:
- i. The interest calculation is based on the percent change in S&P 500[®] Index value only, over a one-year period using only the beginning and ending index values. (S&P 500[®] Index ticker: SPX)
 - ii. An annual cap is used in the interest calculation.
 - iii. The annual floor used in the interest calculation shall be 0%.
 - iv. The participation rate used in the interest calculation shall be 100%.
 - v. Interest is credited once per year.
 - vi. Account charges do not exceed the account charges for any corresponding Index Accounts within the policy in any policy year. If Index Accounts with different levels of account charges are offered with the illustrated policy, more than one Benchmark Index Account may be used in determining the maximum illustrated crediting rates for the policy's Index Accounts, subject to the requirements of paragraph 5 (D). However, for each Index Account within the policy, only one Benchmark Index Account shall apply. Any rate calculated in paragraph 4 (B) shall not apply for an Index Account if the account charges for the applicable Benchmark Index Account exceed the account charges for that Index Account in any policy year. Account charges include all charges applicable to an Index Account, whether deducted from policy values or from premiums or other amounts transferred into such Index Account.
 - vii. Additional amounts credited are not less than the additional amounts credited for any corresponding Index Accounts within the policy in any policy year. Any rate calculated in paragraph 4 (B) shall not apply for an Index Account if the additional amounts credited for the applicable Benchmark Index Account are less than the additional amounts credited for that Index Account in any policy year. Additional amounts include all credits that increase policy values, including but not limited to experience refunds or bonuses.

viii. There are no limitations on the portion of account value allocated to the account.

C. **Fixed Account:** An account where the credited rate is not tied to an external index or indices.

D. **Index Account:** An account where the credited rate is tied to an external index or indices.

4. Illustrated Scale

The credited rate for the illustrated scale for each Index Account shall be limited as follows:

A. Calculate the geometric average annual credited rate for each applicable Benchmark Index Account for the 25-year period starting on 12/31 of the calendar year that is 66 years prior to the current calendar year (e.g., 12/31/1949 for 2015 illustrations) and for each 25-year period starting on each subsequent trading day thereafter, ending with the 25-year period that ends on 12/31 of the prior calendar year.

i. If the insurer offers an applicable Benchmark Index Account with the illustrated policy, the illustration actuary shall use the current annual cap for the applicable Benchmark Index Account in paragraph 4 (A).

ii. If the insurer does not offer an applicable Benchmark Index Account with the illustrated policy, the illustration actuary shall use actuarial judgment to determine a hypothetical, supportable current annual cap for a hypothetical, supportable Index Account that meets the definition of a Benchmark Index Account, and shall use that cap in paragraph 4 (A).

B. For each applicable Benchmark Index Account, the arithmetic mean of the geometric average annual credited rates calculated in paragraph 4 (A) shall be the maximum credited rate(s) for the illustrated scale.

C. For other Index Accounts using other equity, bond, and/or commodity indexes, and/or using other crediting methods, the illustration actuary shall use actuarial judgment to determine the maximum credited rate for the illustrated scale. The determination shall reflect the fundamental characteristics of the Index Account and the parameters shall have the appropriate relationship to the expected risk and return of the applicable Benchmark Index Account. In no event shall the credited rate for the illustrated scale exceed the applicable rate calculated in paragraph 4 (B).

D. At the beginning of each calendar year, the insurer shall be allowed up to three (3) months to update the credited rate for each Index Account in accordance with paragraphs 4 (B) and 4 (C).

5. Disciplined Current Scale

The earned interest rate for the disciplined current scale shall be limited as follows:

A. If an insurer engages in a hedging program for index-based interest, the assumed earned interest rate underlying the disciplined current scale shall not exceed 145% of the annual net investment earnings rate (gross portfolio earnings less provisions for investment expenses and default costs) of the general account assets (excluding hedges for index-based credits) allocated to support the policy.

B. If an insurer does not engage in a hedging program for index-based interest, the assumed earned interest rate underlying the disciplined current scale shall not exceed the annual net

investment earnings rate of the general account assets allocated to support the policy.

- C. These experience limitations shall be included when testing for self-support and lapse-support under Model #582, accounting for all benefits including illustrated bonuses.
- D. If more than one Benchmark Index Account is used for an illustrated policy, each set of Index Accounts that correspond to each Benchmark Index Account must independently pass the self-support and lapse-support tests under Model #582, subject to the limitations in paragraphs 5 (A), 5 (B) and 5 (C). All experience assumptions that do not directly relate to the Index Accounts as to expenses, mortality, investment earnings rate of the general account assets, lapses, and election of any Fixed Account shall equal the assumptions used in the testing for the entire policy.

6. Policy Loans

If the illustration includes a loan, the illustrated rate credited to the loan balance shall not exceed the illustrated loan charge by more than 100 basis points.

7. Additional Standards

The basic illustration shall also include the following:

- A. A ledger using the Alternate Scale shall be shown alongside the ledger using the illustrated scale with equal prominence.
- B. A table showing the minimum and maximum of the geometric average annual credited rates calculated in paragraph 4 (A).
- C. For each Index Account illustrated, a table showing actual historical index changes and corresponding hypothetical interest rates using current index parameters for the most recent 20-year period.

Not for Distribution

Actuarial Guideline XLIX-A

THE APPLICATION OF THE LIFE ILLUSTRATIONS MODEL REGULATION TO POLICIES WITH INDEX-BASED INTEREST SOLD (On or After December 14, 2020)

Background

The *Life Insurance Illustrations Model Regulation* (#582) was adopted by the NAIC in 1995. Since that time there has been continued evolution in product design, including the introduction of benefits that are tied to an index or indices. Although these policies are subject to Model #582, not all of their features are explicitly referenced in the model, resulting in a lack of uniform practice in its implementation. In the absence of uniform guidance, two illustrations that use the same index and crediting method often illustrated different credited rates. The lack of uniformity can be confusing to potential buyers and can cause uncertainty among illustration actuaries when certifying compliance with Model #582.

In 2019, the NAIC decided that illustrations of products with multipliers, cap buy-ups, and other enhancements that are linked to an index or indices should not illustrate better than products without such features. This new requirement is intended to apply to illustrations on policies sold on or after the effective date of this guideline while the existing requirements continue to apply for inforce illustrations on policies sold before the effective date of this guideline.

This guideline provides uniform guidance for policies with index-based interest. In particular, this guideline:

- (1) Provides guidance in determining the maximum crediting rate for the illustrated scale and the earned interest rate for the disciplined current scale.
- (2) Limits the policy loan leverage shown in an illustration.
- (3) Requires additional consumer information (side-by-side illustration and additional disclosures) that will aid in consumer understanding.

Text

1. Effective Date

This Actuarial Guideline shall be effective for all new business and in force illustrations on policies sold on or after December 14, 2020.

2. Scope

This Actuarial Guideline shall apply to any life insurance illustration that meets both (i) and (ii), below:

- i. The policy is subject to Model #582.
- ii. The policy offers Indexed Credits.

3. Definitions

- A. Alternate Scale: A scale of non-guaranteed elements currently being illustrated such that:
 - i. The Annual Rate of Indexed Credits for each Index Account does not exceed the lesser of the maximum Annual Rate of Indexed Credits for the illustrated scale less

100 basis points and the credited rate for the Fixed Account. If the insurer does not offer a Fixed Account with the illustrated policy, the Annual Rate of Indexed Credits for each Index Account shall not exceed the average of the maximum Annual Rate of Indexed Credits for the illustrated scale and the guaranteed Annual Rate of Indexed Credits for that account. However, the Annual Rate of Indexed Credits for each Index Account shall never be less than the guaranteed Annual Rate of Indexed Credits for that account.

- ii. If the illustration includes a loan, the illustrated Policy Loan Interest Credited Rate shall not exceed the illustrated Policy Loan Interest Rate. For example, if the illustrated Policy Loan Interest Rate is 4%, the Policy Loan Interest Credited Rate shall not exceed 4%.
 - iii. All other non-guaranteed elements are equal to the non-guaranteed elements for the illustrated scale.
- B. Annual Net Investment Earnings Rate: Gross portfolio annual earnings rate of the general account assets (excluding hedge assets for Indexed Credits), less provisions for investment expenses and default cost, allocated to support the policy. Charges of any kind cannot be used to increase the Annual Net Investment Earnings Rate.
- C. Annual Rate of Indexed Credits: The total annualized Indexed Credits expressed as a percentage of the account value used to determine the Indexed Credits.
- D. Benchmark Index Account: An Index Account with the following features:
- i. The interest calculation is based on the percent change in S&P 500[®] Index value only, over a one-year period using only the beginning and ending index values. (S&P 500[®] Index ticker: SPX)
 - ii. An annual cap is used in the interest calculation.
 - iii. The annual floor used in the interest calculation shall be 0%.
 - iv. The participation rate used in the interest calculation shall be 100%.
 - v. Interest is credited once per year.
 - vi. The Hedge Budget used to determine the cap in 3 (D) (ii) does not exceed the Annual Net Investment Earnings Rate. Charges of any kind cannot be used to increase the annual cap.
 - vii. There are no enhancements or similar features that provide additional Indexed Credits in excess of the interest provided by 3 (D) (i) through 3 (D) (v), including but not limited to experience refunds, multipliers, or bonuses.
 - viii. There are no limitations on the portion of account value allocated to the account.
 - ix. A single Benchmark Index Account will be determined for each policy. This can be either an Index Account offered with the illustrated policy or determined according to Section 4 (A) (ii) for purposes of complying with this guideline. A policy shall have no more than one Benchmark Index Account.

- E. Fixed Account: An account where there are no Indexed Credits.
 - F. Hedge Budget: For each Index Account, the total annualized amount assumed to be used to generate the Indexed Credits of the account, expressed as a percent of the account value in the Index Account. This total annualized amount should be consistent with the hedging program of the company.
 - G. Index Account: An account where some or all of the amounts credited are Indexed Credits.
 - H. Indexed Credits: Any interest credit, multiplier, factor, bonus, charge reduction, or other enhancement to policy values that is linked to an index or indices. Amounts credited to the policy resulting from a floor greater than zero on an account with any interest credit, multiplier, factor, bonus, charge reduction, or other enhancement to policy values that is linked to an index or indices are included.
 - I. Loan Balance: Any outstanding policy loan and loan interest, as defined in the policy.
 - J. Policy Loan Interest Rate: The current annual interest rate as defined in the policy that is charged on any Loan Balance. This does not include any other policy charges.
 - K. Policy Loan Interest Credited Rate: The annualized interest rate credited that applies to the portion of the account value backing the Loan Balance:
 - i. For the portion of the account value in the Fixed Account that is backing the Loan Balance, the Policy Loan Interest Credited Rate is the applicable annual interest crediting rate.
 - ii. For the portion of the account value in an Index Account that is backing the Loan Balance, the Policy Loan Interest Credited Rate is the Annual Rate of Indexed Credits, net of any applicable Supplemental Hedge Budget, for that account.
 - L. Supplemental Hedge Budget: For each Index Account, the Hedge Budget minus the minimum of the Annual Net Investment Earnings Rate and the Hedge Budget that is used in the determination of the Benchmark Index Account. The Supplemental Hedge Budget will never be less than zero. This amount should be consistent with the hedging program of the company.
4. Illustrated Scale

The total Annual Rate of Indexed Credits for the illustrated scale for each Index Account shall be limited as follows:

- A. Calculate the geometric average annual credited rate for the Benchmark Index Account for the 25-year period starting on 12/31 of the calendar year that is 66 years prior to the current calendar year (e.g., 12/31/1949 for 2015 illustrations) and for each 25-year period starting on each subsequent trading day thereafter, ending with the 25- year period that ends on 12/31 of the prior calendar year.
 - i. If the insurer offers a Benchmark Index Account with the illustrated policy, the illustration actuary shall use the current annual cap for the Benchmark Index Account in 4 (A).
 - ii. If the insurer does not offer a Benchmark Index Account with the illustrated policy, the illustration actuary shall use actuarial judgment to determine a hypothetical,

supportable current annual cap for a hypothetical, supportable Index Account that meets the definition of the Benchmark Index Account, and shall use that cap in 4 (A).

- B. For the Benchmark Index Account the Annual Rate of Indexed Credits shall not exceed the minimum of (i) and (ii):
- i. The arithmetic mean of the geometric average annual credited rates calculated in 4 (A).
 - ii. 145% of the Annual Net Investment Earnings Rate.
- C. For any other Index Account that is not the Benchmark Index Account in 3 (D), the Annual Rate of Indexed Credits illustrated as a percentage of the account value in the Index Account prior to the deduction of any charges used to fund a Supplemental Hedge Budget shall not exceed the minimum of (i) and (ii):
- i. The Annual Rate of Indexed Credits for the Benchmark Index Account calculated in 4 (B) plus the Supplemental Hedge Budget for the Index Account.
 - ii. The Annual Rate of Indexed Credits reflecting the fundamental characteristics of the Index Account and the appropriate relationship to the expected risk and return of the Benchmark Index Account. The illustration actuary shall use actuarial judgment to determine this value using lookback methodology consistent with 4 (A) and 4 (B) (i) where appropriate.
- D. For the purposes of compliance with Section 6 (C) of Model #582, the Supplemental Hedge Budget is subtracted from the Annual Rate of Indexed Credits before comparing to the earned interest rate underlying the disciplined current scale.

At the beginning of each calendar year, the insurer shall be allowed up to three (3) months to update the credited rate for each Index Account in accordance with 4 (B) and 4 (C).

5. Disciplined Current Scale

The earned interest rate for the disciplined current scale shall be limited as follows:

- A. If an insurer engages in a hedging program for Indexed Credits in an account, the assumed earned interest rate underlying the disciplined current scale for that account, inclusive of all general account assets, both hedge and non-hedge assets, that support the policy, net of default costs and investment expenses (including the amount spent to generate the Indexed Credits of the policy) shall not exceed the lesser of (i) and (ii):
- i. The Annual Net Investment Earnings Rate, plus 45% of the lesser of (1) and (2):
 1. Hedge Budget minus any annual floor, to the extent that the floor is supported by the Hedge Budget.
 2. The minimum of the Annual Net Investment Earnings Rate and the Hedge Budget that is used in the determination of the Benchmark Index Account.

- ii. The Annual Rate of Indexed Credits plus the Annual Net Investment Earnings Rate minus the Hedge Budget.

These rates should be adjusted for timing differences in the hedge cash flows to ensure that fixed interest is not earned on the Hedge Budget minus any annual floor, to the extent that the floor is supported by the Hedge Budget.

Guidance Note: The above approach does not stipulate any required methodology as long as it produces a consistent limit on the assumed earned interest rate underlying the disciplined current scale.

For a policy with multiple Index Accounts, a maximum rate in 5 (A) should be calculated for each account. All accounts, fixed and indexed, within a policy can be tested in aggregate.

- B. If an insurer does not engage in a hedging program for Indexed Credits, the assumed earned interest rate underlying the disciplined current scale shall not exceed the Annual Net Investment Earnings Rate.
- C. These experience limitations shall be included when testing for self-support and lapse-support under Model #582, accounting for all illustrated benefits including any illustrated benefits and bonuses that impact the policy's account value.

6. Policy Loans

If the illustration includes a loan, the illustrated Policy Loan Interest Credited Rate shall not exceed the illustrated

Policy Loan Interest Rate by more than 50 basis points. For example, if the illustrated Policy Loan Interest Rate is 4.00%, the Policy Loan Interest Credited Rate shall not exceed 4.50%.

7. Additional Standards

The basic illustration shall also include the following:

- A. A ledger using the Alternate Scale shall be shown alongside the ledger using the illustrated scale with equal prominence.
- B. A table showing the minimum and maximum of the geometric average annual credited rates calculated in 4 (A).
- C. For each Index Account illustrated, a table showing actual historical index changes and corresponding hypothetical Indexed Credits using current index parameters for the most recent 20-year period.

Actuarial Guideline L

2013 INDIVIDUAL DISABILITY INCOME VALUATION TABLE ACTUARIAL GUIDELINE

A. Background

The 2013 IDI Valuation Table, as included in the *Health Insurance Reserves Model Regulation* (#10), is the valuation standard to replace the 1985 Commissioner's Individual Disability Tables (85CIDA/85CIDC). The link below brings one to the 2013 IDI Valuation Table workbook and instructions:

http://www.naic.org/documents/01_2013_idi_valuation_table_workbook_and_instructions_version_1_3.zip

An actuarial guideline is more appropriate to handle the multiple segments of the 2013 IDI Valuation Table, the computations of own experience, the application of credibility, and successor updates to the table, which are not normally found in model regulations.

B. Purpose

The purpose of this actuarial guideline is to provide instructions for the use of the 2013 IDI Valuation Table that is referenced in the *Health Insurance Reserves Model Regulation* (#10). This guideline pertains to IDI claims consistent with the conditions defined in the model regulation, and governs the selection of claim termination rates for the purpose of calculating IDI claim reserves. This guideline does not address reserve adequacy, which remains the concern of the insurer according to the terms expressed in the model regulation.

Although the various detailed formulas in this guideline do not address or define reserve adequacy directly, it is assumed that appropriate adequacy tests will be made periodically. Such adequacy testing is considered to be an additional tool for the actuary to make appropriate choices in cases in which leeway from any prescription made herein is allowed (A/E calculation, margin, etc.) so that the calculation of the reserve generally will be adequate and the actuary does not need to continually rely on other measures to achieve adequacy. In addition to the instances in which leeway from prescription is mentioned below, nothing in this guideline should be assumed to prohibit the actuary from building a case and requesting permission from the state insurance commissioner for other appropriate variations. Many such situations, because they would apply to fully credible blocks of business and are intended for continual use, should be considered for approval by the commissioner for a period tied to the updates required by section C.vi. of this guideline and not approved on an annual basis.

When the insurer follows the instructions provided in this guideline, the selected claim termination rates meet the minimum valuation standard defined in the model regulation.

C. Valuation Table Modifications

If not invoking the own experience measurement exemption exception specified in section E of this guideline, a company should use a credibility weighted combination of its own claim termination experience with the 2013 IDI Valuation Table to create its specific valuation table for the purpose of calculating disabled life reserve (DLR).

For claims in duration group 1 (months 1 to 12 following disability incurral) or greater, the valuation termination rates are computed using the termination rates from the 2013 IDI Valuation Table (S) multiplied by experience adjustment factors (T) that are calculated separately for four different duration groups.

$$\text{Valuation Termination Rate} = T \times S$$

The duration groups are defined as follows:

- Group 1: duration 1 to 12 months
- Group 2: duration > 12 months and duration <= 24 months
- Group 3: duration > 24 months and duration <= 60 months
- Group 4: duration > 60 months and duration <= 120 months
- Group 5: duration > 120 months

S is the claim termination rates from the 2013 IDI Valuation Table; and

T is computed as $T = [Z \times F * (1-M) + (1 - Z)]$.

Z is a credibility weighting factor, between 0 and 1, developed for each duration group according to the following specifications:

Group 1-5: $Z = \text{Min} \left(\sqrt{N/K}, 1 \right)$ N is the number of expected claimant termination counts from the 2013 IDI Valuation Table.

K is a set of constants defined by duration group as follows:

- Group 1 and 2: $K = 3,300$
- Group 3: $K = 2,500$
- Group 4: $K = 2,100$
- Group 5: $K = 1,700$

F is the ratio of the company's actual total of termination counts to the expected termination counts for the 2013 IDI Valuation Table for each duration group specified above;

The A/E ratio (F) is to be determined based on monthly indemnity. If the actuary has reserve adequacy or other significant analysis that demonstrates that some other weighting of claims (claim or claimant counts, gross benefit, net benefit, etc.) is appropriate for measuring A/E, and also is expected to produce reserves not less than those produced by using a monthly indemnity measurement, such alternative measurement is deemed appropriate. If the actuary cannot produce A/E ratios based on monthly indemnity and only based on claim count or claimant count, an adjustment factor on 0.962 should be multiplied by the A/E ratios in each duration segment to convert them to an indemnity basis. The 0.962 factor is based on the observed relationship for indemnity- versus count-based claim termination experience in the IDI Valuation Table.

M is the company experience margin, determined for each duration group 2 or greater according to the following formula:

$$M = \text{Min} \left(15\%, \text{Max} \left(5\%, 3\% + 1.65 * \sqrt{A/C} \right) \right)$$

This is the minimum value for the definition of M prior to any reserve adequacy analysis. Adequacy tests and analysis of experience (sharpness of fluctuations, trends over the period of the termination rate study, changing claims practices, etc.) may indicate that a larger value of M may be more appropriate. If so, such a value is deemed appropriate. For duration group 1 (1 to 12 months), M is 5 percent, the same as the 2013 IDI Valuation Table margin for duration 1.

A is a set of constants defined by duration group as follows:

- Group 1 and 2: $A = 4.0$
- Group 3: $A = 3.0$
- Group 4: $A = 2.5$
- Group 5: $A = 2.0$

C is the company's actual number of total claimant termination counts by duration group. If an actuary cannot directly determine claimant termination counts, he or she may approximate it using the average number of claims per claimant for their block of claims.

The company should not use termination rates that produce total reserves for claims disabled for more than two years that are less than the reserves produced for these claims by computing T as $T = 1.30$.

D. Company-Specific Experience—Own Company Experience Measurement

In computing values F and S to comply with section B of this guideline, the appointed actuary should:

1. Segment the company claim termination experience into any major subgroup that may produce significantly different results (e.g., market niches, risk management practices, unique benefit designs, etc.);
2. Combine affiliated statutory entities and assumed reinsurance, in which claim management is under a common structure, when considering company experience. It also is appropriate to evaluate experience separately when specific blocks of company business have distinct risk management practices or significantly different risk characteristics;
3. Include all relevant experience the company is capable of providing for as many of the last five years (not including the lag period described below) as is appropriate;
4. Include a suitable lag period. Some claims may close retroactively, and others initially thought to be closed may reopen retroactively. Therefore, based on company experience, a suitable lag period is needed. The appointed actuary may use a lag period of up to 12 months if company experience shows it is appropriate. The five-year period mentioned above does not include the lag period;
5. Measure A/E based on monthly indemnity consistent with the development of the 2013 IDI Valuation Table. The A/E ratio is defined as the ratio of actual claim termination experience to the expected claim termination experience, according to the 2013 IDI Valuation Table with margin (by disability duration grouping). The A/E ratio is referred to as the variable F in section B, paragraph 4 of this guideline. For companies that can develop A/E studies only based on claim termination counts, an adjustment factor of 0.962 should be multiplied by their A/E ratio for each claim duration to convert it to an indemnity basis. The 0.962 factor was developed based on the relationship of the indemnity-based A/E to count-based A/E for the industry table;
6. In calculating expected claim terminations based on the 2013 IDI Valuation Table, companies should use all variables and modifiers with two exceptions:
 - a. If a company has not maintained appropriate diagnosis codes on historical claim records, the company may set the diagnosis CTR modifier to 1.00.

- b. If a company has not maintained appropriate occupation codes on historical claim records to identify occupations and assign them to the five occupation classes of the 2013 IDI Valuation Table consistent with definitions of these occupation classes, the company may assign claims to Occ Classes 1, 2, 3, and 4 based on the way the company has assigned claims to the 85CIDA occupation classes.
7. Assign credibility based on claimant termination counts, and not monthly indemnity terminated. Companies should use claimant termination counts and not claim termination counts in determining the number of terminations for their own company experience credibility. Each company will need to make appropriate adjustments based on its average number of claims per claimant if it is not able to determine claimant termination counts directly and can only directly measure claim termination counts. For example, on average, if a company has 1.5 open claims per claimant and if it had 100 claim terminations in a duration segment over its five-year study period, it would divide 100 by 1.5 and use 67 claimant terminations when determining credibility.
8. Update the minimum valuation basis in accordance with section B of this guideline at least once every five years. In addition, the valuation basis also should be updated whenever the company's annual own experience study produces, in accordance with section B, a value T that changes by more than 10 percent from the one used in the current valuation basis for any of the five duration groups. All claims valued using the 2013 IDI Valuation Table share the same company experience factors. When the company experience factors are updated, the new factors apply to all claims valued using the 2013 table, including claims incurred prior to the update of the experience factors;
9. Do not count as terminations those claims that are closed due to settlement (i.e., a lump sum replacing a series of potential future payments); that have reached the end of the maximum benefit duration; or that are closed due to a contractual limitation, such as a mental disorder limitation. For this purpose a termination due to a change in definition of disability is not considered a termination due to reaching the maximum benefit duration. Terminations of residual or partial disability claims count as total disability terminations. Changes in the definition of disability do not count as a termination unless the claim actually terminates. If a claim closes when the definition of disability changes, that is counted as a claim termination;
10. Use experience that is otherwise relevant in accordance with the professional judgment of the appointed actuary;
11. Do not use experience that the commissioner has deemed inappropriate or likely to produce significantly inadequate reserves; and
12. In the above paragraphs, the term "company" refers to a single company or a group of legally related companies subject to the same claim management.

E. Own Experience Measurement Exemption

If, at the time of valuation, a company has fewer than 50 open claimants disabled within two years of the effective date of the valuation, and fewer than 200 open claimants disabled more than two years prior to the effective date of the valuation, the insurer is exempt from the requirement that the 2013 IDI Valuation Table be modified by the company's own experience. Said company should use 100 percent of the 2013 IDI Valuation Table for calculating claims termination rates in order to comply with the minimum valuation standard. This exemption is determined at the statutory company level and not at any segmented level that might be used in determining the own experience modifier.

Actuarial Guideline LI

THE APPLICATION OF ASSET ADEQUACY TESTING TO LONG-TERM CARE INSURANCE RESERVES

Background

The *Health Insurance Reserves Model Regulation (#010)* and the *NAIC Valuation Manual (VM-25)* contain requirements for the calculation of long-term care insurance (LTC) reserves. Regulators have observed a lack of uniform practice in the implementation of tests of reserve adequacy and reasonableness of LTC reserves. The reserve adequacy testing required by Model #10 and VM-25 does not provide regulators comfort as to the reserve adequacy of companies with material blocks of LTC business. As such, regulators must rely upon asset adequacy analysis required by the *NAIC Valuation Manual (VM-30)* to evaluate the solvency position of companies with sizable blocks of LTC business. This Guideline is intended to provide uniform guidance and clarification of requirements for the appropriate support of certain assumptions for the asset adequacy testing applied to a company's LTC block of contracts. In particular, this Guideline:

- (1) Specifies that the appropriate form of asset adequacy analysis may be in the form of a gross premium valuation or in a more robust form, such as cash-flow testing, with Actuarial Standards of Practice providing guidance in this area;
- (2) Clarifies the type of adequacy testing methods that must be used for aggregation with other blocks of business to be allowed for asset adequacy analysis purposes;
- (3) Requires a uniform approach to supporting acceptable assumptions regarding future LTC premium rate increases;
- (4) Provides requirements for documentation of assumptions associated with all key LTC risks; and
- (5) Provides requirements for documentation of standalone LTC asset adequacy testing results.

Note: It is anticipated that the requirements contained in this Guideline will be incorporated into the *NAIC Valuation Manual (VM-30)* at a future date, effective for a future valuation year. This Guideline will cease to apply to annual statutory financial statements at the time the corresponding VM-30 requirements become effective.

Text

1. **Effective Date**

This Guideline shall be effective for reserves reported with the December 31, 2017, and subsequent annual statutory financial statements.

2. **Authority**

Pursuant to Section 1, paragraph 3, of *VM-30* of the *NAIC Valuation Manual*, the commissioner shall have the authority to specify specific methods of actuarial analysis and actuarial assumptions when, in the commissioner's judgment, these specifications are necessary for an acceptable opinion to be rendered relative to the adequacy of reserves and related items.

3. Scope

This Guideline shall apply to a company with over 10,000 inforce lives covered by long-term care insurance contracts as of the valuation date. All long-term care insurance contracts, whether directly written or assumed through reinsurance are included. Accelerated death benefit products or other combination products where the substantial risk of the product is associated with life insurance or an annuity are not subject to this Guideline.

4. Asset Adequacy Analysis of LTC Business

- A. As stated in Actuarial Standard of Practice (ASOP) No. 22, multiple asset adequacy analysis methods, including cash-flow testing and gross premium valuation, are available to actuaries for this analysis.

The method of analysis used for LTC shall conform with ASOP No. 22 in recognition of the typical significant asset and liability-related risks associated with LTC.

- B. Asset adequacy analysis specific to all inforce LTC business, and without consideration of results for other block of business within the company, must be performed for valuations associated with the December 31, 2017, and subsequent annual statutory financial statements. The analysis shall comply with applicable Actuarial Standards of Practice, including standards regarding identification of key risks. Material assumptions associated with the LTC business shall be determined testing moderately adverse deviations in actuarial assumptions.
- C. When determining whether additional reserves are necessary:
1. A reserve deficiency in the LTC block may be aggregated with sufficiencies in the company's other blocks of business for the purposes of developing an actuarial opinion, if cash-flow testing is used for both the LTC business and for all significant blocks of non-LTC business within a company. If a reserve deficiency in the LTC block is not offset with sufficiencies in the company's other blocks of business, then additional reserves shall be established as required by section 2.C.2. of *VM-30*.
 2. If cash-flow testing is not used for testing of the LTC business, then a reserve deficiency revealed from another method, e.g., a gross premium valuation, utilized for purposes of asset adequacy analysis of the LTC block under this Guideline shall not be offset with sufficiencies in the company's other blocks of business. The additional reserves under this Guideline shall be established based only upon the adequacy of the reserves in the LTC block.
- D. When determining the effect of investment returns or the time value of money:
1. In the case where cash-flow testing is used, the company must allocate investment income to the LTC block of business consistently with the way investment income generated by the General Account is managed. If, however, a segment of the General Account is used to manage the investment risk for LTC business, the investment income generated by assets from that segment should be appropriately represented within the asset adequacy analysis.

2. In the case where a gross premium valuation method is used or asset cash flows are not explicitly modeled, the discount rate used by the actuary must reflect consideration of the yield on current assets held to support the liability as well as future yields on assets purchased with future premium income and reinvestments or anticipated divestiture of existing assets.
- E. The analysis shall only anticipate premium rate increases based upon a rate increase plan that is documented, is supported by and has been approved by management, is highly likely to be undertaken, and contains rate increase requests and timelines by jurisdiction. The assumptions used in the analysis should reflect a reasonable estimate of regulatory approved amounts and implementation timelines.

5. Documentation Required

The documentation requirements below are to be incorporated as a separate section of the appointed actuary's Actuarial Memorandum required by the *VM-30* or in a special Actuarial Memorandum containing LTC-specific information and shall be submitted to the commissioner of the company's state of domicile. The separate section of the companywide Actuarial Memorandum or the special Actuarial Memorandum shall be available to other state insurance commissioners in which the company is licensed upon request to the company. The confidentiality provisions regarding the Actuarial Memorandum contained in *VM-30* are applicable to the separate section of the Actuarial Memorandum and to the special Memorandum.

- A. Results of the asset adequacy analysis of the LTC business shall be reported and documented in the separate section of the Actuarial Memorandum or the special Memorandum, as appropriate.
- B. Assumptions on mortality shall be documented to state the reference standard valuation table, if applicable, and explicitly cite adjustments, select factors, and mortality improvement factors, where applicable. If a reference standard valuation table is not used in setting the mortality assumption, then a table of rates and comparison of the applied rates to rates from an unmodified standard mortality table for sample issue ages shall be provided. A summary of experience or other actuarial support of assumptions used shall be documented.
- C. Assumptions on voluntary lapse shall be documented in table format by duration band and by other factors such as gender, marital status, with versus without inflation rider, and length of benefit period impacting the lapse assumption, where applicable. A summary of experience or other support of assumptions shall be documented.
- D. Assumptions on morbidity shall be documented and actuarial support of the assumption shall be provided. If an outside source is used as the basis for morbidity assumptions, then the rationale for the applicability of that source and any adjustments to the factors from that source shall be documented.
- E. Assumptions on investment returns and interest rates shall be documented. If a simplified approach is applied, such as implicit reflection of projected investment returns through the use of discount rates in a gross premium valuation as contemplated in Section 4.D.2., then justification shall be provided.
- F. Any rate increases already approved shall be documented by jurisdiction with approved implementation timelines. Assumptions on future rate increases shall be documented by policy form or policy grouping. Such documentation should adequately describe the way in which future rate increase assumptions are developed. Unless the appointed actuary has operational responsibility for carrying out the rate increase plan specified in Section 4.E.,

the Memorandum shall contain a signed and dated reliance statement from the person with operational responsibility for carrying out such actions that the rate increase plan(s) provided to the appointed actuary appropriately reflects management's plan.

- G. Documentation of any other material assumptions shall be provided.
- H. Documentation shall be provided for assumptions that have significantly changed from the prior year's analysis.

Actuarial Guideline LII

VARIABLE ANNUITY EARLY ADOPTION

Background

Beginning in 2015, the NAIC commissioned a study of the reserve and RBC framework for Variable Annuity products. The study concluded that the existing requirements resulted in non-economic volatility, providing incentive for companies to engage in the use of financial planning techniques that the NAIC deemed inappropriate. Considerable effort was spent to develop and test updates to the reserve and RBC framework to address these issues. That revised framework was adopted by the NAIC during 2018, and the changes to NAIC models, the NAIC *Valuation Manual*, and the NAIC *Life Risk-Based Capital Forecasting & Instructions* have been developed and adopted by the NAIC on August 2, 2019. By the provisions of the SVL (Model 820), the changes to the *Valuation Manual* will be effective on January 1, 2020, and will impact subsequent financial statements.

During the discussion of the framework by the Variable Annuities Issues (E) Working Group, the question was raised whether companies would have the option to ‘early adopt’; that is, to apply the new framework for the reserve and RBC values used for the December 31, 2019, financial statements. Since the new framework has been determined to provide improved financial measurement of the company’s liability and risk, there was agreement that optional application of the new framework for the December 31, 2019, financial statements would be appropriate.

Guideline

A company may elect to apply the VM-21 requirements from the 2020 NAIC *Valuation Manual* as the *Valuation Manual* requirements for the valuation on December 31, 2019. For such election, the phase-in provision of *Valuation Manual* VM-21 Section 2.B. may not be elected. Any company electing early adoption of VM-21 shall also:

1. Apply the provisions of *Actuarial Guideline XLIII—CARVM for Variable Annuities* as amended for 2020 to the December 31, 2019, valuation of contracts within the scope of that guideline;
2. Apply the Life RBC instructions for 2020 in the calculation of C-3 RBC in LR027 for 2019;
3. Follow the documentation and certification requirements of VM-31 from the 2020 *Valuation Manual* for the Variable Annuity Business. In the VA Summary, clearly indicate the use of the new requirements in the section on change in methods from prior year; and
4. Notify the commissioner of the state of domicile of such elections.

ACTUARIAL GUIDELINES – APPENDICES**Appendix C-1**

Provides maximum reserve valuation and maximum life policy nonforfeiture interest rates for new issues, new purchases or changes in fund (as defined) under Section 4217, 4218, and 4221(k) of the New York Insurance Law as amended in 1982, 1983, 1985, 1986, 1987, 1988, 1990 and 1994. This information is provided for informational purposes and to aid compliance with the New York law.

Appendix C-2

Includes interpretations from the Emerging Actuarial Issues (E) Working Group adopted by the Financial Condition (E) Committee. The Financial Analysis (E) Working Group follows these interpretations in performing its reviews of the reserving methodologies under *Actuarial Guideline XXXVIII—The Application of the Valuation of Life Insurance Policies Model Regulation* (AG 38).

Appendix C-1

APPENDIX TO GUIDELINES

This information can be found on the New York State Department of Financial Services website:
<http://www.dfs.ny.gov/insurance/life/ilifemax.htm>

NEW YORK STATE DEPARTMENT OF FINANCIAL SERVICES Maximum Reserve Valuation and Maximum Life Policy Nonforfeiture Interest Rates

The maximum reserve valuation and nonforfeiture interest rates, prescribed by Sections 4217 and 4221(k) of the New York Insurance Law, are specified in "Table A through Table H Rates" noted below. Such rates vary from year to year based on Moody's corporate bond yield averages for 12 and 36 months ending on June 30, and weighting factors prescribed by Section 4217. The Moody's averages are provided for years 1981 to present in the attached Appendix.

Clarification on Fixed Annuity Reserves Interest Rates

We note that there has been some concern over the appropriate maximum valuation interest rate for flexible premium deferred annuities (FPDA). Section 4217(c)(4)(D)(iii) of the New York Insurance Law does not allow the use of the additional .05 weighting factor for annuities that guarantee interest rates on future considerations received more than twelve months beyond the valuation date. Accordingly, for flexible premium deferred annuities the weighting factors shown in Section 4217(c)(4)(D)(iii)(I) or 4217(c)(4)(D)(iii)(II) should be used. For convenience, maximum valuation interest rates for such FPDAs are shown in Table D (issue year basis) and Table G (change in fund basis). The rates shown in Table E and Table H are not appropriate for FPDAs.

TO: ALL AUTHORIZED LIFE INSURANCE COMPANIES, ACCREDITED LIFE REINSURERS, FRATERNAL BENEFIT SOCIETIES AND CHARITABLE ANNUITY SOCIETIES

SUBJECT: MAXIMUM RESERVE VALUATION AND MAXIMUM LIFE POLICY NONFORFEITURE INTEREST RATES

Attached hereto is an outline providing maximum reserve valuation and maximum life policy non-forfeiture interest rates for new issues, new purchases or changes in fund (as defined) for years 1982 through 2019 (and other years where shown), under Sections 4217, 4218 and 4221(k) of the New York Insurance Law, as amended in 1982, 1983, 1985, 1986, 1987, 1988, 1990, and 1994.

The maximum valuation and non-forfeiture interest rates, prescribed by Sections 4217 and 4221(k) of the New York Insurance Law for future years, will vary from year to year depending on Moody's corporate bond yield averages.

The maximum valuation interest rates for issues, purchases and changes-in-fund of years 1982 through 2020 (and other years where shown) are outlined below. The maximum valuation and non-forfeiture interest rates for Ordinary Life Insurance are shown in Category A of page 1, except for Single Premium Life Insurance, as defined in Section 4217(c)(4)(B)(vi), the maximum valuation interest rates for which are shown in Category B on pages 2-4.

Please refer to Sections 4217 and 4221 of NY Insurance Law, Regulation 147 and Regulation 151 for definitions and explanations of valuation interest rate, guarantee duration, plan type and product category. Regulation 151 has been effective since February 28, 2001, and is available on our web site.

This notice is to be used for informational purposes, as an aid in complying with the law.

Should any person have any question or comment in regard to this information, please contact Mr. Matthew Ryan of the Life Bureau at (518) 474-7929 or Matthew.Ryan@dfs.ny.gov.

A. ORDINARY LIFE INSURANCE (Except as covered in B)

<u>Issue Year</u>	<u>Guarantee Duration</u>	<u>Maximum Reserve Valuation Interest Rate</u>	<u>Maximum Nonforfeiture Interest Rate*</u>
1979-1981	10 years or less	4.50%	5.50%

APPENDIX

The maximum reserve valuation interest rates are based on reference interest rates, which are averages of corporate bond earnings published by Moody's Investors Service, Inc., and weighting factors prescribed by Section 4217, which defines running averages of the published monthly yield rates for 12-month and 36-month periods.

The following table shows the 12-month and 36-month yield averages for recent years:

TABLE 1

<u>For Period Ending June 30 of Year</u>	<u>12-Month Running Average</u> (1)	<u>36-Month Running Average</u> (2)	<u>Lesser of Two Averages</u> (3)
1981	13.71%	11.57%	11.57%
1982	15.70%	13.64%	13.64%
1983	13.39%	14.26%	13.39%

The maximum nonforfeiture interest rate for Life Insurance, under Section 4221(k), for a particular issue year, is equal to 125% of the maximum reserve valuation interest rate for the same issue year, rounded to the nearer 1/4%.

Should the computed maximum reserve valuation interest rate for Life Insurance (other than Single Premium Life Insurance covered in Category B on pages 2-4) for a particular issue year be different from the actual maximum reserve valuation interest rate for the next previous issue year by less than 1/2%, then the maximum reserve valuation interest rate for such particular issue year will be the same as that for such next previous issue year.

Appendix C-2

Interpretations of the Emerging Actuarial Issues (E) Working Group

Introduction

The Emerging Actuarial Issues (E) Working Group responds to questions of application, interpretation and clarification with respect to *Actuarial Guideline XXXVIII—The Application of the Valuation of Life Insurance Policies Model Regulation* (AG 38). Following an abbreviated public comment and review period of no less than seven days, the Working Group will adopt by consensus formal interpretations on issues presented before it. These interpretations will then be reported to the Financial Condition (E) Committee, which, after adopting, will direct the Financial Analysis (E) Working Group to follow the interpretations in performing its reviews of the reserving methodologies under AG 38. These interpretations will not become effective until formally adopted by the Financial Condition (E) Committee. In no event shall a consensus opinion of the Working Group supersede or otherwise conflict with AG 38.

Date Adopted by Financial Condition (E) Committee

December 1, 2012

Reference

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D(b)

Issue / Question

1. The Guideline does not seem to preclude a company from using the Alternative Reserve Methodology for yearend 2012, thus avoiding the Primary Reserve Methodology calculations, even if in prior valuations their total reserve held was not at least as great as the total reserve determined in accordance with the November 1, 2011 Life Actuarial (A) Task Force (LATF) statement. In other words, at yearend 2012 a company can switch to any alternative reserve methodology as long as the total reserve held is at least as great as the total reserve determined in accordance with the November 1, 2011 LATF statement using the required lapses and mortality. Is that a correct interpretation?

Interpretation of Emerging Actuarial Issues (E) Working Group

2. Yes. The requirements as written provide for use of either 8D(a) or 8D(b) for the 12/31/12 valuation.

Interpretation of the Emerging Actuarial Issues (E) Working Group

Actuarial INT 02

Date Adopted by Emerging Actuarial Issues (E) Working Group

Date Adopted by Financial Condition (E) Committee

December 20, 2012

Reference

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D(b)

Issue / Question

1. If a company uses the Alternative Reserve Methodology for yearend 2012, can they switch to the Primary Reserve Methodology for future valuations? What, if anything, should be reported in Exhibit 5A-Changes in Basis of Valuation for yearend 2012 or in future years as a result of these AG 38 revisions and any switch to the Primary Reserve Methodology or to the Alternative Reserve Methodology?

Interpretation of Emerging Actuarial Issues (E) Working Group

2. A company, pursuant to the requirements of AG 38, 8D, may switch between the Primary Reserve Methodology and the Alternative Reserve Methodology.
3. For 12/31/12 or subsequent reserve valuations any change to or from the Primary or Alternative reserve methodologies should be reported in Exhibit 5A.
4. The company should check with their domestic state whether approval is required for any subsequent change to or from the Primary or Alternative reserve methodologies for reserves after 12/31/12.

Interpretation of the Emerging Actuarial Issues (E) Working Group

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D(b)

Issue / Question

1. The Alternative Reserve Methodology calls for deficiency reserve mortality to be based on the VM-20 deterministic reserve mortality. Since XXX calls for segments to be based on deficiency reserve mortality this could affect segment lengths. However, at least the spirit of AG46, which came out when the 2001 CSO Preferred Risk tables came out, seems to allow for segments to continue to be based on the mortality table in use when the policy was issued. Does AG46 apply here and thus the original mortality basis for the segment lengths can continue to be used?

Interpretation of Emerging Actuarial Issues (E) Working Group

2. The original mortality basis for determining the segment length can continue to be used. 8D is not intended to be more restrictive in determination of segments.

Reference

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D

Issue / Question

1. Subsection 8Da states that the Primary Reserve is determined by adding any excess of (2) over (1), where (1) is the reserve according to the methodology and assumptions used to calculate the reserves reported as of December 31, 2011. In the following three scenarios, what is the basis for the determination of (1)? Assume that scenarios 1 and 2 involve universal life with secondary guarantees (ULSG) policies issued between July 1, 2005 and December 31, 2006, with a higher set of cost of insurance (COI) charges being triggered if the shadow account value ever becomes 0 after issue:

- a. Issue 1) Reserves have always been calculated using the wrong methodology for determining the ratio in the fourth step of Section 8B. In applying Section 8D, would the reserves for 8Da1 be based on the correct methodology or on the methodology actually used by the company for year-end 2011?
- b. Issue 2) A policy has a negative account value but has not lapsed due to the secondary guarantee. The shadow account value eventually drops to 0 and then becomes negative, and the policyholder pays a premium during the grace period intended on keeping the policy in force. The company invokes the higher secondary guarantee charges to calculate the shadow account value, but the policyholder argues that the lower shadow account COI charges apply due to the premium being paid during the state required grace period; i.e. that during the grace period the policyholder has the opportunity to pay a premium based on the lower COI charges rather than based on the much higher set of COI charges. This is litigated, and a ruling is made that the higher COI rates cannot be charged unless the shadow account value has not been positive for a period of time greater than the grace period. Based on this ruling, the assumption in the AG38 calculation that the higher set of COI charges would be triggered at the end of the first policy year would not be valid. Would the reserves for 8Da1 continue to be based on the assumption that the higher COI charges would be triggered after the first policy year, or would they be modified to reflect the lower COI charges?
- c. Issue 3) Policies with multiple sets of COI charges have only been issued in 2012. What is the basis for the value of (1)?

Interpretation of Emerging Actuarial Issues (E) Working Group

2. Issue 1) The reserves determined by the company under 8D(a)(1) are intended to be consistent with the methodology used by the company for the 12/31/2011 valuation. If a calculation error has been made in applying the 2011 methodology, this error should not be repeated in applying this methodology for the 2012 year-end valuation.

3. Issue 2) Where a valid court decision has interpreted the provisions of a policy, those interpretations should be reflected in future reserve calculations. In effect, the court ruled that the company made a mistake in applying certain policy provisions. Therefore, the 2012 reserve calculations should incorporate the correct view of the affected policies' provisions as determined by the court. As in 1) above, any error in the 2011 reserve calculations due to this company mistake should not be perpetuated in the 2012 reserve calculations.

4. Issue 3) In this case, the value of (1) would be based on the company's methodology for reserving these policies for 2012 quarterly reporting.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation

Issue / Question

1. My question is on section 8E, regarding when a product would fall under method 1 or method 2. If you have a shadow account product that has either a single set of charges, or multiple sets of charges, and the product meets the crediting rate limitations defined in method 1, is there anything that could cause the product to be deemed to be subject to method 2? To put it another way, when I read section 8E, it seems that any shadow account product meeting the interest crediting limits would fall under method 1. This is because all shadow accounts have either a single set of charges or multiple sets of charges, so all shadow account products that meet the interest crediting limitation would fall under policy design 1 or policy design 3. Is this a correct interpretation, or if not, why?

Interpretation of Emerging Actuarial Issues (E) Working Group

2. This interpretation is not completely correct. In drafting the revisions to AG 38, regulators were aware of the possibility that all existing and future product designs might not fit the three generic product designs noted in AG 38, independent of the crediting rate limitation. Method II was intended to provide a default reserve methodology for these other product designs, together with the more generic product designs containing interest crediting guarantees higher than the company-selected interest index plus 3 percent. The considerations in satisfying the actuarial opinion requirements contained in Section 8E should enable the opining actuary to determine the appropriate reserving methodology for a particular universal life with secondary guarantees (ULSG) product design.

Interpretation of the Emerging Actuarial Issues (E) Working Group

Date Adopted by Financial Condition (E) Committee

December 1, 2012

Reference

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D(b)

Issue / Question

1. Section 8D(b), Alternate Methodology, requires the company to determine its deficiency reserve under Model 830 using mortality and lapse assumptions according to the same requirements for determining the deterministic reserve in the Valuation Manual. Does this require the company to determine its Triple-X segments (under the segmentation method) using the qx and lapse rates of the VM, or simply use these qx and lapse rates in calculating the deficiency reserve once the segments are determined using the company's current approach for determining such segments?

Interpretation of Emerging Actuarial Issues (E) Working Group

2. The original mortality basis for determining the segment length can continue to be used. 8D is not intended to be more restrictive in determination of segments.

Note: This response is similar to that for question Actuarial INT 03.

Interpretation of the Emerging Actuarial Issues (E) Working Group

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation

Issue / Question

1. Given all of the focus that the Guideline places on what premiums to use for these universal life with secondary guarantees (ULSG) reserve calculations, we are having unexpected difficulty finding published guidance on what premiums to assume in the deterministic reserve calculations for the Primary Reserve Methodology. Does such guidance exist and if so, where can we find it?
2. This question specifically asks for published guidance, but if none exists, perhaps the Working Group could provide such guidance or at least common practices/approaches they are aware of. Guidance is needed to create consistency amongst how companies are approaching this step of the calculation.

Interpretation of Emerging Actuarial Issues (E) Working Group

3. For 8D(a)(2) reserve calculations, the company should use the expected premium to be paid by the policyholder, determined either policy-by-policy or by appropriate policy groupings. The Valuation Manual adopted by the A Committee on 8/17/12 provides requirements regarding premiums for the deterministic reserve calculation. Such requirements include those in Section 4(A), Section 7(B), and Sections 9(A) and 9(D).

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8E(II)

Issue / Question

1. For the combination premium patterns, what does it mean "...to have access to better charges and credits..."? Can this be ignored if the product only has one set of charges?

Interpretation of Emerging Actuarial Issues (E) Working Group

2. Better charges and credits can be understood as lower charges and/or higher credits that may be triggered based on the magnitude of the premium paid, the shadow account or other measures generally dependent on policyholder behavior. For example, a higher interest rate might apply to amounts above or below some defined premium dollar limit in particular policy years or based simply on the level of the shadow account. Higher or lower premium payments could lead directly to the most favorable interest rate (or weighted average interest rate) accessible within product design constraints. Better charges and credits would generally lead to lower minimum gross premiums and potentially greater deficiency reserves. For purposes of this question this requirement cannot be ignored, particularly if there are multiple sets of credits in addition to the assumed single set of charges.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D (a)(2a)

Issue / Question

1. Should the VM-20 deterministic reserve starting asset requirement related to the 2% collar be applied before or after the Primary Reserve Methodology caps on starting and reinvestment assets are applied?

Interpretation of Emerging Actuarial Issues (E) Working Group

2. Subsection a.2.a) (I) of Section 8D requires the determination of one of two portfolios of existing assets to support the initial reserve estimate for the block. Once this initial asset portfolio is determined, the deterministic gross premium reserve is determined using as the discount rates the net investment returns generated by the future projected cash flows calculated using the selected initial portfolio and future net reinvestment rates established according to subsection a.2.a) (II) of Section 8D.

3. If the resulting reserve falls within the +/- 2% collar (referenced in VM-20) relative to the initial reserve estimate (and corresponding level of initial assets), the calculated reserve is the final reserve. If the calculated reserve breaches the +/- 2% collar, the actuary must either provide a detailed rationale as to why the calculated reserve is appropriate or redo the reserve calculation assuming revised initial reserve and asset levels.

4. In performing the additional reserve calculation(s), use the same asset portfolio (adjusted upward or downward as below based on the results of the deterministic reserve calculation), either that of subsection a.2.a) (I) (i) or a.2.a) (I) (ii), as chosen for the initial reserve calculation.

5. If the initial or subsequently determined reserve is greater than the prior reserve estimate and the asset portfolio used in the deterministic reserve calculation is:

- a. as described in subsection a.2.a)(I)(i), then the prior asset portfolio shall be adjusted upward using assets as described in subsection a.2.a)(I)(i) to the extent such assets remain available in the company's portfolio after which such assets shall be adjusted upward as needed using assets as described in subsection a.2.a)(I)(ii). The recommended method for adjusting the prior asset portfolio upward is to do so in a pro rata fashion. Any other method proposed for adjusting the prior asset portfolio upward must be clearly documented in the Actuarial Memorandum and shall not involve changing the asset composition of the prior asset portfolio but shall constitute only additions to that portfolio.

Appendix C-2

- b. as described in subsection a.2.a)(I)(ii), then the prior asset portfolio shall be adjusted upward as needed in a pro rata fashion using assets as described in subsection a.2.a)(I)(ii).

6. Regardless of which portfolio is chosen for the initial deterministic reserve calculation, if the initial or subsequently determined, reserve is less than the prior reserve estimate, then the prior asset portfolio shall be adjusted downward as needed in a pro rata fashion.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8E/8D

Issue / Question

1. Consider the following: A universal life policy with a secondary guarantee requires that a shadow account be maintained at a positive level for the secondary guarantee to remain in effect. Once the shadow account value goes down to zero, the secondary guarantee terminates and cannot be reactivated. There is only one set of charges and credits that apply to the shadow account. In determining reserves for this policy under section 8E, would the assumption be made that the secondary guarantee terminates at the end of the first policy year since, if only the minimum premium is paid, the shadow account value would be zero at the end of the first policy year?
2. If the policy was written before 2012, would it be subject to section 8D?

Interpretation of Emerging Actuarial Issues (E) Working Group

3. For issues in or after January 1, 2013, 8E would be applicable. But the policy, as described, would not fit into Method I because the minimum premium derived according to Method I would not satisfy the secondary guarantee requirements. Calculation of the reserve using Method I requires that the minimum premium keep the secondary guarantee in effect. Therefore, it must be reserved according to Method II.
4. For issues between July 1, 2005 and December 31, 2012 (inclusive), any regulatory response regarding applicability of Section 8D would require analysis of the policy form and dialog with the valuation actuary.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8E

Issue / Question

1. Under 8E, Method I, Policy Design #1 applies for policies containing a secondary guarantee that uses a shadow account with a single set of charges and credits. For those policies, the minimum gross premium for any policy year is the premium that, when paid into a policy with a zero shadow account value at the beginning of the policy year, produces a zero shadow account value at the end of the policy year, using the guaranteed shadow account charges and credits specified under the secondary guarantee. Presumably, this will result in a yearly renewable term (YRT)-like pattern for the minimum premium.

2. The actuarial opinion required by 8E includes the statement "the minimum gross premiums determined under Policy Design # ___ are not inconsistent with the minimum premiums, charges and credits that are expected to apply under the policy." What is meant by "expected to apply"?

3. Since it is not likely that the policyholder will fund the policy using the YRT-like pattern that is the minimum premium, it does not seem as if "expected to apply" means "expected to be paid." It appears that "expected to apply" should be interpreted to mean that the YRT-type pattern will either fund the secondary guarantee or it is less than the minimum amount necessary to fund the guarantee.

Interpretation of Emerging Actuarial Issues (E) Working Group

4. The phrase "expected to apply" is intended to mean that the minimum premiums determined (\$0-to-\$0) are based on charges/credits generally consistent with those expected to apply to premium scales likely to be received from policyholders. For example, high premium loads at later durations would not be expected to apply for products with charges and credits that encourage a limited-pay or single-pay premium pattern. Other design features that should give the opining actuary pause, and could draw regulatory scrutiny, include negative charges and credits or unusual patterns of charges and credits. In addition, the actuary should not favorably opine on a product for Method I reserves with variables resulting in minimum gross premiums that would be inconsistent with the premiums a reasonable person would pay to limit advance funding. If the actuary is unable to opine favorably, the reserves should be calculated under Method II.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation

Issue / Question

1. A shadow account has a product design feature where the premium load is expressed as a fixed percentage of premium up to the target premium, and the target premium is reasonably consistent with level premium funding of the lifetime guarantee. In effect, there is a fixed dollar cap on the annual premium charge. The literal form of the charge is simply a specified percentage of premiums up the target premium and 0% thereafter. This will always mathematically produce the same result as the capped charge described above. Please clarify that a fixed dollar cap for the premium load, regardless of how the cap is expressed, does not make such a product incompatible with Policy Design # 1.

Interpretation of Emerging Actuarial Issues (E) Working Group

2. A flat percentage of premium charge, subject to an annual maximum, would be compatible with Policy Design (PD) #1 provided the actuary is able to issue an unqualified actuarial opinion. The specified percentage rate subject to an annual maximum may be construed as a single rate even though an alternative expression of this charge could be viewed as involving a second rate equal to zero. However, it should be noted that the actuary might be unable to opine favorably in the case of designs with credit/charge structures that encourage limited-pay premium schedules.

3. The above interpretation does not extend to designs using a flat percentage load for premiums up to a break point and a different (non 0%) load for premiums above that. Such a design should be considered as PD#3, as would any design with tiered interest rate credits or other tiered credits/charges.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8E

Issue / Question

1. Does the exemption for UL policies with short guarantee periods (see below) still apply in Section 8E of AG38?
2. This language is from the XXX model reg (Model 830)
 - 3.A.(2) This regulation shall not apply to any universal life policy that meets all the following requirements:
 - (a) Secondary guarantee period, if any, is five (5) years or less;
 - (b) Specified premium for the secondary guarantee period is not less than the net level reserve premium for the secondary guarantee period based on the CSO valuation tables as defined in Section 4F and the applicable valuation interest rate; and
 - (c) The initial surrender charge is not less than 100 percent of the first year annualized specified premium for the secondary guarantee period.

Interpretation of Emerging Actuarial Issues (E) Working Group

3. Yes.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D

Issue / Question

1. Section 8D(a) references the deterministic reserve calculation in the VM20 valuation manual in the definition of the Primary Reserve Methodology. As part of the asset assumptions used in the deterministic reserve calculation, page 82 of the VM20 manual describes the derivation of the Illustrative Current Market Benchmark Spreads. We have reviewed the JP Morgan US Liquid Index data referenced, and the final published values appear to be derived from the underlying data for the index as opposed to referencing published table views. Does the Working Group agree that using an updated table would be preferred? Would the Working Group consider publishing an updated table as of 9/30 or providing additional details on how the table values (shown on page 89) were derived? The values for Table G (page 90) for the below investment grade bonds were taken directly from the source index so they are easy to replicate.

Interpretation of Emerging Actuarial Issues (E) Working Group

2. For the 12/31/12 AG 38, 8D valuation it may be assumed that the 9/30/09 Tables H & I approximate both Tables F & G and Tables H & I as of 12/31/12. This assumption is based on benchmarking with current spread information from other sources as of 12/31/12. It is understood that strict technical compliance for each and every asset may not be possible due to modeling limitations. Professional judgment should be used to produce results that comply with the spirit of this standard, i.e., no lessening of conservatism. For example, if a company has access to current data sources and can reconstruct Tables F and G as of 12/31/12 then this would be an acceptable approach. In any event, appropriate explanation and justification should be provided for the methodology that was employed and the results that were obtained. The NAIC intends to provide updated tables for future year end AG 38, 8D, valuations.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D

Issue / Question

1. If the modified VM-20 deterministic reserve ends up being the minimum reserve held in the AG 38 8D calculation, can a reinsurance reserve credit also be calculated under the guidance of VM-20 (in particular for YRT reinsurance)?

Interpretation of Emerging Actuarial Issues (E) Working Group

2. The Section 8D reserve methodology (VM-20 deterministic) applies for calculating the company's aggregate gross reserve before reinsurance. AG 38, 8D, does not address how the credit for reinsurance is determined. The approach to determine the credit for YRT reinsurance shall be documented in the stand-alone Actuarial Memorandum required by AG 38, Section 8D(c).

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation

Issue / Question

1. A product has a shadow account product design feature where, in addition to the fixed charges and credits associated with the policy, there is a shadow account premium charge in the event that the policyholder underfunds the policy. This premium charge is expressed as a fixed percentage of the premium shortfall when compared to a given level premium.
2. Please clarify whether a shadow account charge expressed as a fixed percentage of the premium shortfall is regarded as “multiple sets of charges” or as a “single set of charges” and thus whether such a product is compatible with Policy Design # 1 or Policy Design # 3.

Interpretation of Emerging Actuarial Issues (E) Working Group

3. This charge and treatment as Policy Design 1 does not appear consistent with the type of charge and treatment addressed by adopted INT 24 (formerly referred to as Pending Submission 6 prior to its adoption).
4. INT 24 deals with a single charge that all policyholders will incur which stops after a certain level of premiums have been paid. The charge described here is not incurred by all policyholders and provides the potential for a reserve premium being subject to the full impact of this charge whereas the premiums actually expected to be paid would not incur this charge.
5. More information is needed to fully assess the applicable Policy Design but based on the information provided Policy Design 3 appears appropriate.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8E I) 3 Actuarial Opinion and Company Representation section

Issue / Question

1. A company currently issues a ULSG product that is clearly a Policy Design #3. Two hypothetical examples of the charge/credit structure are shown in Tables 1 and 2 below. Under either structure, the policy form:

- Is clearly Policy Design #3
- Does not run afoul of the “Index plus 3%” of 8E

2. The purpose of the bifurcated cost of insurance charge structure in Table 1 or bifurcated premium charge structure in Table 2 is to optimize management of policyholder premium paying pattern behavior. The exact insurance charge for any given policy under the Table 1 design is either COI 1 or COI 2, where the rate is determined by comparing the actual fund value to a pre-defined fund value. If the actual fund value is in excess of the pre-defined fund value, COI 1 is used, otherwise COI 2 is used. Similarly, the exact premium charge amount for any given policy under the Table 2 design is PremPct1 for amounts paid up to a target amount plus PremPct2 for amounts paid in excess of the target amount.

3. The company’s approach to establishing statutory reserves has always been to determine AG XXXVIII Step 1 minimum premiums based on the lowest charges from Table 1 (or Table 2). The actuary concludes that everything in the reserving practices of the company with respect to this policy form is in compliance with the letter and spirit of AG XXXVIII, and except for the third statement in the Actuarial Opinion (of Section E), the actuary feels s/he could sign such an attestation. The third statement declares “the minimum gross premiums determined under Policy Design #3 are not inconsistent with the minimum premiums, charges and credits that are expected to apply”.

4. What is the actuary expected to do in such a situation?

TABLE 1					TABLE 2				
	COI_1	COI_2	Interest	Prem Load		COI	Interest	Up to Target PremPct1	In excess PremPct2

Regulation XXX; *Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation*, Section 8D

Issue / Question

1. The company states that reserves equal to the deterministic reserve required in the valuation manual of the valuation law (model 820) are lower than produced under the above methodology, but states that it would hold reserves per the valuation manual if that produced greater reserves in aggregate for the block. If tested for each policy, the reserve required per the valuation manual would in some cases be higher than as calculated based on regulation XXX. Can the valuation manual floor be applied in aggregate rather than for each policy?

Interpretation of Emerging Actuarial Issues (E) Working Group

2. The deterministic reserve as required by Actuarial Guideline 38 8D(a) should be applied in the aggregate versus policy by policy.

Not for Distribution

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 7 and Steps 1, 2, and 8 of Section 8E

Issue / Question

1. Does the language “This result may be negative.” occurring twice in Step 3 of Section 8E of Actuarial Guideline 38 (AG 38) apply only to the Method II reserve approach in AG 38 or to both Method I and Method II reserve approaches? Step 3 of Section 8E of AG 38 provides for the determination of the amount of actual premium payments (or shadow account) greater than or less than the minimum gross premiums (or shadow account based on minimum premiums), as defined in Section 8E.
2. The issue regarding the referenced language relates to the interpretation of Step 3 as it applies particularly to (i) cumulative premium secondary guarantee designs with a “premium catch-up provision” or (ii) shadow account secondary guarantee designs where, if the shadow account is below the level necessary to maintain the secondary guarantee, there is a “catch-up provision” where the shadow account may be reinstated prior to the end of the secondary guarantee period.
3. In addition to Section 8E of AG 38, it appears that Section 7 of AG 38 applies in this situation. For Section 8E Method I reserve calculations, the language of Section 7 appears to deal with any deficiency indicated in Step 3 of Section 8E satisfactorily since that deficiency is measured relative to the guarantees (cumulative premium or shadow account). In this case, the value of the numerator in Step 3 of Section 8E would be zero and the floor basic and deficiency reserve would be set at the minimums defined in Section 7.
4. However, for Section 8E Method II reserve calculations, for purposes of applying Section 8E, the deficiency in Step 3 is measured relative to the premium defined in Step 1 which is the schedule of minimum gross premiums that create the greatest deficiency reserve rather than the schedule of minimum gross premiums based on the policy guarantees. This is inconsistent with the requirements and intent of Section 7 and therefore would allow for the ratio in Step 4 of Section 8E to be negative.

Interpretation of Emerging Actuarial Issues (E) Working Group

5. The recommended response is essentially correct. The phrase, “This result may be negative” applies only to Method II policies in Section 8E, Step 3. This phrase does not apply to the Step 3 amount for Method I policies given the requirements of AG 38, Section 7. Method I policies that would otherwise have a negative Step 3 amount were it not for Section 7 are those policies that are underfunded but provide for a catch up provision as addressed by Section 7. The Step 2 basic and deficiency reserves for such policies, used to calculate the “reserve floor” in Step 8 (c), must be adjusted as provided by Section 7 prior to calculating the “reserve floor” in Step 8 (c).

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D.a.2(a)

Issue / Question

1. Section 8D directs companies to use "...the same requirements for determining the deterministic reserve in the version of the valuation manual specified...but with two modifications..." In determining future Treasury yield rates used in calculating the sale price of any asset existing on the valuation date, this language in Section 8D of AG38 can be interpreted in one of two ways:

- a. Assuming a level series of future Treasury yield curves for all future years of the model projection period. In this case, any gains or losses arising from the sale of existing assets during the projection period would be determined using a level Treasury yield curve scenario prospectively, and a spread applicable to the asset, as determined on the valuation date.
- b. Assuming the series of future Treasury yield curves is that described under Scenario 12 from the prescribed set of interest rate scenarios used in the stochastic exclusion test in VM-20. To these Treasury rates is added a spread to determine the yield rate to be used on the sale of an existing asset during the model projection period.

Interpretation of Emerging Actuarial Issues (E) Working Group

2. It is recommended that the approach outlined in paragraph 1.a. be the interpretation of the relevant language of Actuarial Guideline 38 Section 8D.a.2(a).

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D.A.2(a)(I)

Issue / Question

1. Section 8.D.A.2(a)(I) states, “net investment returns based on a portfolio of A-rated corporate bonds purchased in the year of issue of the policies based on yields available in the year of issue of those bonds” shall be calculated.
2. A possible interpretation of this language is that a company may be permitted to determine this hypothetical portfolio book yield for each year using their actual A-rated bonds purchased in that year, i.e. their own A-rated bonds. Is this approach acceptable?

Interpretation of Emerging Actuarial Issues (E) Working Group

3. It was the intent of this provision that a company use a hypothetical portfolio composed of A-rated corporate bonds with yields commensurate with the A-rated corporate bond yields available in the year of issue. If the yields associated with the company's actual A-rated bonds purchased in the year of issue are commensurate with A-rated corporate bond yields available in the year of issue, then the company's approach is acceptable. If the yields associated with the company's bonds are significantly higher than A-rated corporate bond yields available in the year of issue, then the approach is unacceptable.
4. If such an approach was used, the appointed actuary should address this question in the memorandum. Reasonable approaches for comparison to a company's assets include using a published index of A-rated corporate bond yields such as Moody's at an appropriate point in the year of issue or an average over the course of the year. Another reasonable approach would be to use a Treasury yield curve at an appropriate point in the year of issue or an average over the course of the year plus an appropriate published spread of A-rated corporate bond yields over Treasuries. An appropriate point in time would be June 30 of that year if the business was sold uniformly throughout the year. If the comparison does not show the yields from company's assets to be commensurate with the published index or adjusted yield curve rate, then (a) the sample size of the company's own A-rated portfolio relative to the total portfolio backing the liabilities, and (b) the year to year consistency of asset allocation become major items to be addressed in the memorandum.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D.a

Issue / Question

1. Section 8D.a. applies to a company's aggregate gross reserve before reinsurance. The reserve calculation requires a projection of future year-by-year cash flows, which includes such items as investment earnings and general insurance expenses. If a company has ceded 100% of the business to an authorized reinsurer by use of coinsurance, the assets and net liabilities are no longer on the ceding company's books. Additionally, the administration is also generally transferred to the reinsurer. In such circumstances, the projection of future cash flows is "hypothetical" in that one must assume a starting asset portfolio, future investment strategy, future general insurance expenses, and so on. Furthermore, the ceding company generally does not have the data or systems to determine the reserves and must rely on the assuming company.

2. Since the assuming company is required to calculate the reserves on both direct and assumed business, may the ceding company use the reserves as reported by the reinsurer in the reinsurer's annual statement?

Interpretation of Emerging Actuarial Issues (E) Working Group

3. Under 100% coinsurance agreements with an authorized reinsurer, the ceding company is permitted to report reserves equal to those calculated by the reinsurer in the reinsurer's Exhibit 5/Schedule S.

4. Note that this interpretation was not being requested for coinsurance with funds withheld, modified coinsurance, or agreements where the reinsurer is unauthorized.

5. The Working Group recommends the above interpretation as guidance for yearend 2013, provided there is no conflict with the accounting requirements in the *Accounting Practices and Procedures Manual*. The issue/question will be submitted to the Life Actuarial (A) Task Force for broader consideration and possible amendment to the valuation manual.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Sections 8B and 8C

Issue / Question

1. Step 4 of Section 8E says "...determine the minimum amount of shadow account required to fully fund the guarantee." Should this determination take into account actual history, or is this a purely theoretical value?
2. Consider a hypothetical policy valued on its 5th anniversary. It has a shadow fund value of \$12,000. Premiums of \$2,500 were paid on each anniversary. If the policyholder paid an additional \$63,000 (net of premium loads) on the valuation date, the guarantee would be fully funded. However, due to the product design, if the \$12,000 shadow fund value resulted from a single premium of \$10,000 at issue, the guarantee would be fully funded by payment of an additional \$60,000 (net) at the valuation date. Is the "minimum amount" \$75,000 or \$72,000?

Interpretation of Emerging Actuarial Issues (E) Working Group

3. Step 4 of Section 8E states that the determination is to be made as of "the valuation date for the policy being valued...", indicative of a seriatim calculation that considers the actual circumstances of the policy. If on the valuation date a specific set of charges and credits are applicable for future shadow account calculations, such charges and credits should be used in the determination regardless of any more favorable charges and credits that may have been available as of the issue date.
4. Given the information that the policyholder has no control over the future charges and credits to be applied in fully funding the guarantee, it is presumed that a single set of charges/credits (with no caps or floors) is operative as of the valuation date. While an unqualified response is not possible in the absence of a full understanding of the policy design, the minimum amount appears to be \$75,000 rather than \$72,000.
5. Also, per AG38, Section 8E, the actuary must ensure that the methodology is compatible with the intent that the funding ratio (Step 3 result divided by the Step 4 result) measures the level of prefunding.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D

Issue / Question

1. Actuarial INT 27 clarifies that AG38, Section 8D, addresses the gross reserve requirements and required documentation regarding reinsurance. In reviewing the AG 38, Section 8D Actuarial Memorandum and reinsurance information, it appears that guidance is needed to address situations where the YRT reinsurance agreement reserve credit taken may be significantly different than the reserve an assuming company has set up. Such a significant difference can be due to a larger credit being calculated under VM-20 assumptions versus that set up by an assuming company. Additionally, in some cases the higher gross reserve required under the AG 38, Section 8D modified deterministic reserve, was not reported in the statutory blank prior to the reinsurance credit being taken.

Interpretation of Emerging Actuarial Issues (E) Working Group

2. The reserve established pursuant to AG 38, Section 8D (AG38-8D), should be reported on a gross basis prior to any adjustment for reinsurance. In addition, the reserve credit for reinsurance on policies subject to AG38-8D should be calculated using current statutory requirements and mortality and interest applicable under the AG38-8D.a.1. calculation.

3. Since AG38-8D does not address credit for reinsurance and only addresses calculation of the gross reserve, any determination of such credit would be outside of AG38-8D and, therefore, based on current statutory requirements and accepted practices. For example, for the calculation of the ceding credit to be posted in the statutory statement, current accounting guidance (including SSAP No. 61R, paragraph 37) should be followed. And for asset adequacy analysis, both for general testing of aggregate reserves and for the standalone analysis required by AG38-8C, currently accepted actuarial practice should be followed. AG38-8D does not incorporate VM-20 directly into either of these.

Interpretation of the Emerging Actuarial Issues (E) Working Group

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D. a.2.a)(I), Section 7.D. of VM-20

Issue / Question

1. Subsection a.2. of Section 8D provides for two exceptions to the usual deterministic reserve requirements of VM-20 in calculating the gross premium reserve in Section 8D.a.2. One of these exceptions, in subsection a.2.a)(I), relates to net investment earnings on starting assets and limits those earnings to "...the lesser of (i) the actual portfolio net investment returns and (ii) the net investment returns based on a portfolio of A-rated corporate bonds..."

2. The language of Section 8D.a.2.a)(I) is not prescriptive as to the process for determining this net investment earnings comparison. One option is to compare actual portfolio yields to hypothetical portfolio yields as of a single point in time, most logically the valuation date. Another option is to develop both an actual and hypothetical portfolio as of the valuation date and project future asset cash flows and net investment returns prospectively and then use the lesser earning portfolio net investment return in each future year. Other prospective-type approaches to determining the Section 8D.a.2.a)(I) lesser net investment return portfolio are also possible. These lesser returns are then combined, in some fashion, with the net reinvestment return prescribed in Section 8D.a.2.a)(II) to develop the final path of discount rates used in the final Section 8D.a.2.c) reserve calculation.

3. In determining an appropriate interpretation of the language of Section 8D.a.2.a)(I) an important question to ask is: Is a prospective-type interpretation and approach illustrated above, or something similar, consistent with the determination of a single starting asset portfolio as described in Section 7.D. of VM-20? The objective of the requirement in Section 8D.a.2.a)(I) is to impose a restriction on the determination of the starting asset portfolio required under VM-20 for the deterministic reserve calculation, not to anticipate the use of multiple portfolios prospectively. The use of future year-by-year net investment returns from multiple portfolios (actual and hypothetical) would appear to be inconsistent with the starting asset portfolio requirement of VM-20.

4. The issues at hand are twofold:

- a. Does a prospective future net investment return comparison interpretation of the language of Section 8D.a.2.a)(I) create an inconsistency with the language of Section 7.D. of VM-20 with respect to the requirements for utilizing a single starting asset portfolio in the deterministic reserve calculation?
- b. Given the multitude of possible approaches that might be used, does a prospective future net investment return comparison interpretation of the language of Section 8D.a.2.a)(I)

lead to the creation of a non-level playing field beyond the range of approaches available in interpreting Section 8D.a.2.a)(I) in a manner that is consistent with VM-20?

Interpretation of Emerging Actuarial Issues (E) Working Group

5. For 12/31/2014 and later Section 8D submissions, for purposes of determining the starting asset portfolio, the language of Section 8D.a.2.a)(I) is interpreted such that the actual/hypothetical starting asset portfolio net investment return comparison is made as of the valuation date and not prospectively. Examples of how the comparison may be made include (i) a comparison of the weighted average hypothetical portfolio versus actual portfolio net investment returns as of the valuation date or (ii) a historical issue-year-by-issue-year hypothetical versus actual portfolio net investment return comparison, perhaps resulting in a starting asset portfolio as of the valuation date that is a hybrid of the company's actual portfolio assets for certain issue years and a hypothetical asset portfolio for other issue years.

6. For purposes of this comparison for 12/31/16 and later, the actual portfolio net investment return is adjusted by the current amortization of IMR allocated to the portfolio. This adjustment is made only for the comparison of portfolio yields to determine the appropriate portfolio to use in the development of the deterministic reserve. The reserve amount is then determined following the procedure defined in VM-20.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D.a.2.c) and Section 7.C.4. of VM-20

Issue / Question

1. Subsection a.2.c) of Section 8D provides for the calculation of gross premium Primary Reserve to be performed using the path of net investment returns determined in Section 8D.a.2.b) "...to discount the cash flows applicable to those policies.", i.e. those policies subject to Section 8D. The cash flows referenced in Section 8D.a.2.c) are to include, as per Section 4.A.3. of VM-20, death and cash surrender benefits. For the ULSG policy types subject to the requirements of Section 8D, if the interest rate credited to the policy account value is a non-guaranteed element (NGE), the value of the benefits be directly impacted by the net investment earnings of the assets used to back the reserves held in support of the risks assumed under the policies. In addition, lapse rates for these ULSG policy types also may vary depending on the net investment earnings of the assets used to back the reserves held in support of the risks assumed under the policies.
2. Section 7.C. of VM-20, covering NGE cash flows, requires, in subsection 4. that:
 - a. "Projected levels of NGE in the cash flow model must be consistent with the experience assumptions used in each scenario. Policyholder behavior assumptions in the model must be consistent with the NGE assumed in the model."
 - b. There is only a single (level) interest rate scenario applicable for the Section 8D.a.2. reserve gross premium reserve calculation so the issue centers on whether the NGE and policyholder behavior assumptions are "consistent" with the experience assumptions and NGE respectively.

Interpretation of Emerging Actuarial Issues (E) Working Group

3. This interpretation permits the delinking of the liability cash flows used in the Section 8D.a.2.c) gross premium reserve calculation from the net investment returns determined as in Section 8D.a.2.b) provided the actuary can provide justification that the impact of such delinkage on the Section 8D.a.2. reserve calculation is consistent with the requirements of Section 7.C.4 and Section 2G of VM-20.
4. The information required to support the delinked approach would need to present reasonable justification and reflect the consistency of the assumptions used with the particular company's anticipated experience and ULSG product structures. The information provided should be adequate to support the assertion that the requirements of Section 2.G. and Section 7.C.4. of VM-20 have been achieved.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8D. a.2.a)(I)

Issue / Question

1. Section 8D directs companies to test: “The company’s aggregate gross reserve before reinsurance for the business subject to this Section 8D to be reported in the December 31, 2012, and subsequent annual statutory financial statements of the company will be the aggregate reserve under 1 below, plus any excess of the aggregate reserve determined as defined in 2 below, over 1”.
2. Furthermore Section 8D requires that for existing assets: “The projected net investment earnings from the starting assets shall be the lesser of (i) the actual portfolio net investment returns and (ii) net investment returns based on a portfolio of A-rated corporate bonds purchased in the year of issue of the policies based on yields available in the year of issue for those bonds.”
3. Is it required to test reinsurance assumed?
 - a. Some companies only test at the direct writer level (using hypothetical portfolios) while other companies test the reinsurance assumed against actual assets.
4. Is it appropriate to use hypothetical portfolios for testing?
 - a. Assuming a company where the reserves are 100% ceded (all but an insignificant amount was coinsurance) and no assets remain. May the company test on the basis of a hypothetical portfolio of A rated bonds described above? While this may be the only interpretation available, there is no connection between the assets and the liabilities or any company investment policy.
 - b. When the existing asset yield is below that of the hypothetical portfolio, is it required to take a hair-cut on the yields of the existing assets or is it acceptable to use a hypothetical portfolio of just one bond per issue year instead?

Interpretation of Emerging Actuarial Issues (E) Working Group

5. Do the requirements of AG38-8D apply to applicable reinsurance assumed?
 - a. Yes. It is required to apply the requirements of AG38-8D to include reinsurance assumed on risks that are within its scope. AG38-8D(a) includes the company’s “aggregate gross reserve before reinsurance...”. This is interpreted, for applicable business, to be the company’s direct written business plus coinsurance reinsurance assumed and prior to any

reinsurance ceded. Only this interpretation is consistent with the scope of AG38-8D and the reporting of reserves in Exhibit 5 of the annual statement.

6. Is it appropriate to use hypothetical portfolios for testing?
 - a. There are two types of hypothetical portfolios possible for this question.
 - i. The first type of hypothetical portfolio is required by AG-38, 8D(a)(2)(a)(I)(ii). This citation provides for a derivation of a hypothetical “portfolio of A rated corporate bonds purchased in the year of issue of the policies based on yields available in the year of issue for those bonds.”
 - ii. There may be a second type of hypothetical portfolio to use in place of the actual portfolio pursuant to AG38, 8D(a)(2)(a)(I)(i) if that actual portfolio is incomplete or unavailable for a company that has ceded some or all of the risk through coinsurance. In this case the company may coordinate with and make use of the reserve calculations of the assuming reinsurer, as provided in VM-20 Section 8.A.1. However, the ceding company, in calculating the pre-reinsurance ceded reserve or gross reserve required by AG-38 Section 8D, must assure that such modeling and assumptions are appropriate as provided by the first paragraph of VM-20 Section 8.D.2 and as provided by VM-20 Section 8.D.2.b.

Actuarial Guideline 38—The Application of the Valuation of Life Insurance Policies Model Regulation, Section 8E

Issue / Question

1. A universal life policy contains a secondary guarantee based on the value of a shadow account. As long as the shadow account is positive, the policy is guaranteed not to lapse, even if the cash surrender value is not positive. The shadow account value accumulates with interest from one period to another, with deductions for COI charges. The interest credited to the shadow account is calculated as follows:

- 10% interest is credited to the shadow account up to a threshold amount.
- 0% interest is credited to the any excess of the shadow account over the threshold amount.
- The threshold amount is equal to the accumulation of the level premium that would keep the shadow account positive throughout the secondary guarantee period, assuming 10% interest is credited.

2. The shadow account is not larger than the threshold amount on the valuation date. For purposes of the fourth step in sections 8B and 8C of the Guideline, what interest rate should be used to determine the shadow account value that would fully fund the secondary guarantee?

Interpretation of Emerging Actuarial Issues (E) Working Group

3. This interpretation is qualified for issues within the scope of AG 38, Section 8E, only and applies to those section 8E products issued on and after 1/1/16. The intent of the ratio in AG 38 8E Step 4 is to measure the level of pre-funding and to specify its use to establish reserves in its application to the Net Single Premium. The objective is to provide for reserves equal to the appropriate portion of the Net Single Premium represented by pre-funding as of the valuation date. The ratio is a practical convention for this objective.

4. For shadow account secondary guarantee product designs with multiple charges/multiple credits where consistency of charges and credits in the numerator and denominator of the ratio is difficult to achieve, reasonable efforts must be made to establish a ratio which, on an aggregate basis, carries out the objective above.

5. Otherwise, reasonable efforts should be made to produce a conservative estimate of the present value of future benefits on a statutory basis which, in the aggregate, carries out the objective above. Such conservative estimate, when divided by the Net Single Premium calculated in AG 38 8E, Step 5, produces the ratio.

6. For any shadow account secondary guarantee product designs with multiple charges/multiple credits the denominator of the ratio shall be limited to be no larger than the Net Single Premium as calculated in AG 38 8E, Step 5

Not for Distribution

Appendix D

GAAP Cross-Reference to SAP as of December 2020

Introduction

As expressed in the Statement of Concepts, statutory accounting principles (SAP) utilize the framework established by Generally Accepted Accounting Principles (GAAP). Appendix D includes GAAP pronouncements that have been considered or are pending consideration in the development of SAP.

The NAIC Codification of Statutory Accounting Principles Working Group addressed all GAAP pronouncements included in Category A, Category B and Category C issued through 1996 during the initial drafting of the SSAPs, as well as the AICPA Accounting Interpretations included in Category D. This working group is now called the Statutory Accounting Principles (E) Working Group (SAPWG).

- Category A – FASB Statements and Interpretations, APB Opinions, and AICPA Accounting Research Bulletins
- Category B – FASB Technical Bulletins, Board-Directed FASB Staff Positions, AICPA Industry Audit and Accounting Guides, and AICPA Statements of Position
- Category C – Consensus positions of the FASB Emerging Issues Task Force (EITF) and AICPA Practice Bulletins
- Category D – AICPA Accounting Interpretations

Subsequent to the NAIC codification of statutory accounting principles, as documented in the Policy Statement on the Maintenance of Statutory Accounting Principles (included in Appendix F), the SAPWG continued to review new GAAP guidance for applicability to SAP. Beginning January 1, 1999, the Emerging Accounting Issues (E) Working Group (EAIWG) was formed and began addressing FASB EITF opinions issued subsequent to 1996. The positions of the EAIWG are documented in an interpretation (INT) as indicated by reference in the applicable column of the GAAP Cross-Reference to SAP chart. Appendix B includes the full text of EAIWG INTs issued before December 31, 2015. In October 2010, the SAPWG undertook a project to incorporate authoritative guidance related to specific topics in one location. This means that guidance within INTs has been incorporated into the applicable SSAPs, where possible. Appendix D now references the applicable SSAP, not the nullified INT. Therefore, completely superseded SSAPs and nullified INTs are removed from the Manual and retained in *Appendix H – Superseded SSAPs and Nullified Interpretations*, which is posted for public reference on the SAPWG web page at http://www.naic.org/cmt_e_app_sapwg.htm. Under this approach, only current guidance is included in the Manual, while preserving the historical reference of previous authoritative SSAPs and INTs for accounting purposes.

In addition to the GAAP Cross Reference to SSAP, Appendix D includes a Nonapplicable GAAP Pronouncements supplement which contains a listing of GAAP pronouncements that have been considered in the development of SAP and deemed not applicable.

In June 2009, the FASB issued *FASB Statement 168, FASB Accounting Standards Codification and the Hierarchy of Generally Accepted Accounting Principles (FAS 168)*, effective for interim and annual periods ending after Sept. 15, 2009. FAS 168 (Topic 105 of the FASB Codification) identified the sources of accounting principles and the framework for selecting the principles used in the preparation of the financial statements of nongovernmental entities that are presented in conformity with generally accepted accounting principles (GAAP) in the United States. Pursuant to this standard:

- FASB Accounting Standards Codification was established as the source of authoritative accounting principles recognized by the FASB to be applied by nongovernmental entities. (SEC guidance included within the FASB Codification is provided for convenience and relates only to SEC entities.)
- Accounting Standards Updates issued after the effective date of FAS 168 are not considered authoritative in their own right. Such standards serve only to update the FASB Codification, provide background information, and provide the bases of conclusions on the changes to the FASB Codification.
- Effective September 15, 2009, all non-SEC accounting and reporting standards were superseded. Additionally, all nongrandfathered, non-SEC accounting literature not included in the Codification was deemed nonauthoritative. As of September 15, 2009, AICPA Statements of Position are no longer reviewed as part of the statutory maintenance process as they are no longer considered authoritative GAAP literature. If the AICPA were to address an issue that affects the FASB Codification, an accounting standard update (ASU) would be issued and reviewed for applicability to statutory accounting.

As a result of FAS 168, Appendix D – GAAP Cross Reference to SAP has been revised to include reference of FASB Accounting Standards Updates, as well as the Accounting Standards Codification Reference (Topic and Subtopic) for pre-codification GAAP guidance. Pre-codification GAAP guidance that has been superseded as a result of exclusion from the GAAP Codification has been identified within Appendix D. Users of the NAIC *Accounting Practices and Procedures Manual* shall continue to refer to the FASB pre-codification standards, and the applicable references to such standards, to determine the GAAP guidance that has been adopted, adopted with modification or rejected for statutory accounting.

To assist users in tracing pre-codification GAAP standards to the FASB Codification, Appendix D – GAAP Cross-Reference to SAP includes the Topic and Subtopic for all pre-codification GAAP standards that have been included in the FASB Codification. This FASB Codification reference does not reflect GAAP guidance adopted for statutory accounting. Only the guidance detailed in specific SSAPs or INTs shall be utilized in determining the GAAP guidance adopted, adopted with modification or rejected for statutory accounting. Items noted with “Not Explicitly Included in Codification” are no longer included in the FASB Cross Reference tool.

Information Provided in Appendix D – GAAP Cross-Reference to SSAP:

- Status – This column includes the SAPWG status of review. A “pending” status indicates that the SAPWG has not completed deliberation of the GAAP pronouncement. Items noted as “Not Board-Directed or SEC Update” will not be reviewed by the SAPWG unless specifically requested for review.
- Disposition – This column represents the general conclusion of the SAPWG/EAIWG for the stated GAAP pronouncement. This information is included in Appendix D as a reference tool, however, the guidance in the specific SSAP or INT shall be the authoritative source in determining the GAAP guidance adopted, adopted with modification or rejected for statutory accounting.
- Statutory Reference – This column provides the statutory accounting source addressing the GAAP pronouncement.
- Accounting Standards Codification Topic and Subtopic – This column provides a reference guide to trace pre-codification GAAP standards to the new FASB Codification.

In addition to the “GAAP Cross Reference to SSAP,” Appendix D includes the “FASB Codification to Pre-Codification GAAP” supplement. This supplement serves as a reference tool in tracing the FASB Codification to pre-codification GAAP standards that have been reviewed or are pending review as part of the current NAIC statutory accounting maintenance process. This supplement does not indicate which GAAP standards have been adopted, adopted with modification or rejected for statutory accounting. Pre-codification GAAP guidance not captured as part of the statutory accounting maintenance process, but that has been incorporated in the FASB Codification, has not been referenced within this supplement. Future consideration will occur on whether this pre-codification GAAP guidance will be reviewed for statutory accounting. Pre-codification GAAP included in the FASB codification, but not referenced within this supplement includes: FASB Derivative Implementation Group Issues; EITF Appendix D Topics; FASB Statement No. 138 Examples; FASB Staff Implementation Guides; AICPA Technical Inquiry Service and Audit and Accounting Guides. (The Audit and Accounting Guides (AAG) related to insurance have been reviewed for statutory accounting and are referenced in this supplement – HCO: Health Care Organizations, LHI: Life and Health Insurance and PLI: Property and Liability Insurance Companies. This supplement also does not include reference to the SEC standards incorporated within the FASB Codification: SEC Financial Reporting Releases; SEC Interpretive Releases; SEC Staff Accounting Bulletins; and SEC Regulation S-X.

² On December 5, 2009, the Statutory Accounting Principles (E) Working Group adopted revisions to the NAIC *Accounting Practices and Procedures Manual* to refer to the FASB Accounting Standards Codification as prescribed in *FAS 168, FASB Accounting Standards Codification and the Hierarchy of Generally Accepted Accounting Principles* (FAS 168). With the issuance of FAS 168, and the establishment of the FASB Codification, the previous GAAP hierarchy established in *FAS 162, The Hierarchy of Generally Accepted Accounting Principles* (FAS 162) has been eliminated. As a result of FAS 168, the FASB Accounting Standards Codification is the source of authoritative accounting principles recognized by the FASB. (SEC guidance included within the codification is provided for convenience and relates only to SEC entities.) Pursuant to previous decisions by the Statutory Accounting Principles (E) Working Group, FASB Staff Positions (FSPs) issued after May 9, 2008, will be reviewed as part of the statutory accounting maintenance review process. FSPs issued prior to May 9, 2008, will be reviewed as part of the maintenance process if considered to be “Board-directed”. (Board-directed FSPs were issued to provide narrow and limited revisions to the FASB statements or FASB interpretations formerly provided in FASB Technical Bulletins.) FSPs that were not considered “Board-directed” were considered to provide application guidance similar to that found in FASB Staff Implementation Guides and Staff Announcements and were previously classified (pre-FAS 162) as NAIC Level 5 guidance. Due to this Level 5 classification, these FSPs were not reviewed as part of the statutory accounting maintenance review process.

³ As of September 15, 2009, AICPA Statements of Position are no longer reviewed as part of the statutory maintenance process as they are no longer considered authoritative GAAP literature. If the AICPA were to address an issue that affects the FASB Codification, an accounting standard update (ASU) would be issued and reviewed for applicability to statutory accounting. Therefore, this table will no longer be updated after SOP 09-1.

Appendix D

Nonapplicable GAAP Pronouncements for Statutory Accounting as of December 2020

In 2015, Issue Paper No. 99—Nonapplicable GAAP Pronouncements was removed from Appendix E and incorporated into this section of Appendix D.

For items presented to the Statutory Accounting Principles (E) Working Group, this table addresses Generally Accepted Accounting Principles (GAAP) pronouncements that are nonapplicable due to one of the following reasons:

- a. The pronouncement does not relate to the insurance industry;
- b. The pronouncement is not within the objectives of statutory accounting;
- c. The pronouncement would not add a substantive amount of guidance to statutory accounting due to the narrow scope of the topic;
- d. The pronouncement relates to transition of a previously issued GAAP pronouncement.

For items previously presented to the Emerging Accounting Issues (E) Working Group, this table includes references to EITFs that have been rejected for the following reasons:

- a. Rejected as not applicable to statutory accounting;
- b. Rejected without providing additional statutory guidance;
- c. Rejected on the basis of issues rejected in a SSAP.

*NOTE: EITFs marked with an asterisk were rejected as not applicable to statutory accounting on the basis of issues rejected in a SSAP (paragraph c. above).

GAAP pronouncements¹ not considered applicable to NAIC statutory accounting principles are summarized as follows:

NONAPPLICABLE GAAP PRONOUNCEMENTS FOR STATUTORY ACCOUNTING

GAAP Pronouncement	Title
<i>FASB Accounting Standards Updates (ASU)</i>	
ASU 2009-02	Omnibus Update—Amendments to Various Topics for Technical Corrections

Appendix D

FASB Codification Cross-Reference to GAAP Pronouncements as of December 2020

Information provided within this Appendix D supplement has been obtained from the FASB Cross-Reference Tool. This supplement serves as a reference tool in tracing the FASB Codification to pre-codification GAAP standards and post-codification GAAP accounting standard updates (ASU) that have been reviewed, or are pending review, as part of the current NAIC statutory accounting maintenance process. This supplement does not indicate which GAAP standards have been adopted, adopted with modification or rejected for statutory accounting, as this information is contained in previous sections of this appendix. The following information is not included within this supplement:

- Pre-codification GAAP guidance that has not been captured as part of the statutory accounting maintenance process, but that has been incorporated into the FASB codification, which includes FASB Derivative Implementation Group Issues; EITF Appendix D Topics; FASB Statement No. 138 Examples; FASB Staff Implementation Guides; AICPA Technical Inquiry Service and Audit and Accounting Guides
- SEC standards incorporated within the FASB Codification SEC Financial Reporting Releases; SEC Interpretive Releases; SEC Staff Accounting Bulletins; and SEC Regulation S-X.
- GAAP codification topics (and/or subtopics) that have been deemed not applicable to statutory accounting (e.g. Topic 920 – Entertainment-Films)
- GAAP codification topics (and/or subtopics) that had no reference to previous GAAP guidance reflected in the FASB Cross-Reference Tool.

The Audit and Accounting Guides (AAG) related to insurance have been reviewed for statutory accounting and are referenced in this supplement – HCO: Health Care Organizations, LHI: Life and Health Insurance and PLI: Property and Liability Insurance Companies.

Appendix E Statutory Issue Papers

Introduction

Issue papers are used as the first step in developing new or revised SSAPs, and each contains a recommended conclusion, discussion and relevant literature section. While issue papers do not constitute an authoritative level of statutory accounting guidance as defined by the statutory hierarchy, they are an important part of the *Accounting Practices and Procedures Manual* (Manual) because they reference the history and discussion of the related SSAP.

Issue papers are published in the Manual within Appendix E the first year after adoption of the related SSAP, but are then removed from the subsequent year's Manual and posted for public reference on the Statutory Accounting Principles (E) Working Group (SAPWG) web page at www.naic.org/cmte_e_app_sapwg.htm.

Issue Papers Associated with SSAPs Adopted in 2020

Working Capital Finance Investment Updates

STATUS

Finalized May 20, 2020

Original SSAP: 105; Current Authoritative Guidance: SSAP No. 105R

Type of Issue:

Common Area

SUMMARY OF ISSUE

1. This issue paper introduces substantive revisions to SSAP No. 105—*Working Capital Finance Investments* to change some of the existing accounting and program requirements. This item is specific for Working Capital Finance investments (WCFI) which comply with the program requirements and have been designated by the NAIC Securities Valuation Office (SVO).

SUMMARY CONCLUSION

2. The substantive revisions to SSAP No. 105 (illustrated in Exhibit A), reflect the following elements:

- a. Functionally Equivalent Foreign Regulators – Removed the requirement that the SVO determine if the International Finance Agent is the functional equivalent of the U.S. Regulator.
- b. Commingling Prohibitions – Removed the finance agent prohibitions on commingling.
- c. Requirements for Filer to Certify First Priority Perfected Interest – Removed requirements, with revisions allowing the SVO to determine if first priority perfected interest has been obtained.
- d. Finance Agent Validation Requirements – The independent review requirements were broadened to allow independent review of the finance agent by either audit or through an internal control report.
- e. Default Date – Changed the default provisions from 15 to 30 days so the default date and the cure period are consistent. This has the effect of changing the date of nonadmission for an investment in default for a period up to 30 days instead of up to 15 days.
- f. Investor Rights Edit – Removed duplicative text regarding exercise of investor rights.

3. This issue paper provides historical information on the consideration of revisions for working capital finance program issuances acquired as investments, as well as some of the initially adopted guidance. SSAP No. 105 permits admittance of NAIC Securities Valuation Office designated WCFI programs that meet specific requirements.

Working Capital Finance Investments Overview

4. Bills receivable, in general, are an asset class that has been historically nonadmitted by statutory accounting. They were nonadmitted prior to codification and explicitly nonadmitted in *SSAP No. 20—Nonadmitted Assets*.

5. When SSAP No. 105 was developed, SSAP No. 20 was amended to allow working capital finance investments as admitted assets to the extent they conform to the requirements of SSAP No. 105 (see Relevant Statutory Accounting). Some of the WCFI program requirements are to provide protections that help to distinguish these programs from factoring, forfaiting, invoice discounting and other similar programs which have been historically nonadmitted in SSAP No. 20. SSAP No. 105 details that eligible confirmed supplier receivables must not: include insurance or insurance related assets; be impaired or in default at the time of purchase; or have a maturity longer than one year from the date of invoice. In addition, there are restrictions that preclude admission of affiliated WCFI investments.

6. SSAP No. 105 provides that working capital finance investments represent a confirmed short-term obligation¹ to pay a specified amount owed by one party (the obligor) to another (typically a supplier of goods), generated as a part of a working capital finance investment program currently designated by the NAIC Securities Valuation Office (SVO). Pursuant to the long-term working capital finance investment program, a short-term obligation has been transferred by the entity entitled to payment (typically a supplier of goods) to a third-party investor.

7. Working capital finance investments held by a reporting entity represent a right for the reporting entity to receive future payments. This issue paper provides details on the updates to the SSAP No. 105 accounting and reporting guidelines for the right to receive payment under working capital finance programs that meet particular criteria.

Background

8. SSAP No. 105 requires an SVO program designation of NAIC 1 or NAIC 2 (See definitions in relevant statutory accounting) in order to admit working capital finance investments. This was an intentional choice by the Working Group and the Valuation of Securities (E) Task Force during the initial development of guidance in 2012 to limit the admissibility to high quality programs and obligors. High quality programs in existence at the time of the original development of SSAP No. 105 and the some of the requirements of these programs which were administered by larger banks were reviewed.

9. During the original development of SSAP No. 105, the single group reporting entities that had been successfully investing in these types of assets for a number of years, agreed that a high level of investor sophistication to enter and monitor the transactions is required. Also, during the original development of SSAP No. 105, some regulators expressed concerns regarding the ability of smaller entities to monitor the investments in such programs on an ongoing basis. That concern was the basis of the recommendation reflected in the original Issue Paper No. 147 presented to the Working Group to note that such investments which do not fit into traditional categories, may require department of insurance approval.

10. When SSAP No. 105 was developed, the Capital Adequacy (E) Task Force also determined a capital charge for the receivables which varied based on the NAIC designations on the new Schedule BA reporting lines which were developed for these investments.

11. The subsequent industry 2019 proposal developed under discussion by the Working Group proposed to move the investments to Schedule DA — Short-term Investments. During the subsequent review, the Working Group indicated a preference to maintain the long-term programs on annual statement BA where lines and columns would allow proper reporting of the risk-based capital charge. While the program issuances are limited to short-term investments, the long-term program which continually has new balances is what receives the designation.

¹ All references to short-term obligations in this issue paper refer to obligations not exceeding one year.

DISCUSSION

Development of Statutory Accounting Guidance

12. SSAP No. 105 was originally effective in 2014 and was controversial as it was developed at the request of a single life entity. At that time, some Working Group members objected to the development of a new SSAP, reporting changes and specific asset class risk-based capital (RBC) charges at the behest of a single company. The discussion at that time noted that the permitted practice concept was intended to address such situations.

13. In 2018, the reporting entity that participates in these programs requested modifications to the adopted program and submitted a proposal for consideration.

14. As of year-end 2018, WCFI reported in the annual statement Schedule BA - Other Invested Assets was limited to the same life entity that originally requested the development of SSAP No. 105. This company reported a total of \$258 million in a total of seven WCFI programs for 2017 and \$224 million in a total of six WCFI programs for 2018. The total of these amounts is immaterial to the reporting entity. No reporting entities disclosed any prescribed or permitted practices varying from SSAP No. 105 in annual statement Note 1 for 2017 or 2018.

15. The Valuation of Securities (E) Task Force exposed the industry proposal and held discussion on in the third quarter of 2018. The Task Force approved referral to the Statutory Accounting Principles (E) Working Group, which was also supported by the life industry at the 2019 Spring National Meeting. The referral was also forwarded to the Working Group with Valuation of Securities (E) Task Force Memos.

16. The industry proposed ten revisions to SSAP No. 105 affecting the following key aspects:

- a. Changes to program and or obligor credit quality requirements
- b. Changes to program administration and/or documentation
- c. Changes to regulatory compliance requirements
- d. Changes to statutory reporting requirements.

17. On August 3, 2019, the Working Group received the referral from the Task Force and directed NAIC staff to proceed with drafting revisions for subsequent exposure using six of the ten industry recommendations.

Review of Items Not Supported by the Working Group:

18. During the August 2019 discussion the following four industry proposed revisions were presented, but not captured in the direction for revisions to SSAP No. 105.

- a. Possible Domestic Regulator Approval – The statement that the reporting entity may need to seek approval from the domestic regulator was maintained.
- b. Only High-Quality Obligor – The current requirement which restricts designations of programs and obligors to being of high quality (NAIC 1 or NAIC 2) was maintained.
- c. Unrated subsidiaries / Credit substitution - The industry proposed credit substitution methodology for unrated subsidiaries was not incorporated in the exposed revisions. The industry proposal had two aspects:
 - i. Credit substitution for unrated subsidiary obligors of a rated obligor – Industry proposed to attribute the credit strength of the rated parent to the unrated subsidiary

obligor without the rated parent being a guarantor of the unrated subsidiary's WCFI obligations. This aspect envisions the rated entity having some of its own obligations in the program

- ii. Credit Substitution of rated obligor for its unrated subsidiaries which are key transaction participants, but not obligors. The industry proposal was to create criteria to allow the "program" to obtain an acceptable NAIC designation by evaluating if the unrated "key transaction participant" is able to perform its functions. Industry proposed several different ways to attribute the rated entity's credit rating to the unrated entity including:
 - (a) Documented operational control of unrated obligor, or
 - (b) An important inter-relationship with unrated obligor, or
 - (c) If the unrated key transaction participants are reasonably expected to perform their functions.
- d. Change Reporting Schedule - The Working Group did not change the reporting requirements to move the WCFI investments from Schedule BA – Other Assets, to Schedule DA – Short term Investments.

19. Some of the discussion points that were discussed which resulted in the Working Group not directing the inclusion of four of the industry proposed revisions were as follows:

- a. Possible Domestic Regulator Approval – The statement that the reporting entity may need to seek approval from the domestic regulator was maintained as previously noted in Issue Paper No. 147. The Issue Paper documents the possible requirement for domestic regulator approval was an intentional decision because of concerns regarding the ability of smaller entities to monitor the investments in such programs on an ongoing basis.
 - i. It was also noted that the current guidance in SSAP No. 105 is not an explicit requirement, but only identifies that a domiciliary commissioner **may** require a company to receive initial permission (see final action in paragraph 23).
 - ii. The agenda item noted that the industry proposal noted:
 - (a) that these investments may not fit into the normal investment law categories.
 - (b) the asset class is not for most insurers as it requires relationships with finance agents beyond the traditional dealer insurer.
 - (c) the investor needs specialized knowledge, asset management operations and the ability to book and supervise the assets.
 - (d) the filing fees require sizable commitments to justify the costs, which would make it cost prohibitive for smaller players.
 - iii. As a counterpoint to the decision not to change the guidance in the SSAP No. 105, the Fall 2019 industry comments noted that state approval is not a practical risk mitigant. In addition, the speaker present at the meeting commented that he questioned the evaluation criteria that would be used by a state.

- b. Only High-Quality Obligors – The current requirement which restricts designations of programs and obligors to being of high quality was maintained. The Working Group was not in favor of lowering the credit quality of the acceptable obligors from NAIC 1 (highest quality) and NAIC 2 (high quality) to allow NAIC designations of 3 (medium quality) and NAIC 4 (low quality) (See definitions in relevant statutory accounting).
- i. The descriptions of NAIC designations in the *Purposes and Procedures Manual of the Investment Analysis Office* note that both NAIC designations of 3 and 4 have speculative elements.
 - ii. Assets that reflect “factored receivables” are nonadmitted in statutory accounting. This program is the sole exception to the factored receivable rule. By lowering the allowable credit standards, an expanded class of factored receivables would be admitted, further deviating from statutory accounting concepts.
 - iii. The SAPWG created SSAP No. 105 to allow admission for only high-quality programs, from high quality obligors. Allowing obligors with lower credit assessments would be a fundamental change in program requirements.
- c. Unrated subsidiaries / Credit substitution – The industry proposed credit substitution methodology for unrated subsidiaries was not incorporated in the exposed revisions. The industry proposal was noted in the discussion as complex, broad and difficult to apply. Further, credit substitution does not adequately address credit risk for an unrated affiliate. SVO staff memos also highlighted the difficulty in applying the industry proposed credit substitution methodology. Excerpts from the Valuation of Securities (E) Task Force October 2018 memo to the Working Group note the following:
- SVO evaluated whether analytical discretion would enable it to designate WCFI programs with unrated obligors of a rated or designated parent. SVO evaluated whether operational and strategic linkages between a rated parent and unrated obligor can provide a basis to attribute the credit rating of one entity to the other. **It concluded that no principle exists to permit an assumption that a legal entity can be held responsible for the debt of another without having contractually agreed to do so. While WCFI arrangements may be inherently different than the credit situations SVO assesses SVO lacks the experiential basis to opine on the idea that the difference permits attribution.**
- d. Change Reporting Schedule – The Working Group did not change the reporting requirements to move the WCFI investments from Schedule BA – Other Assets, to Schedule DA – Short term Investments. Key points noted were:
- i. Reporting on Schedule BA was intentional because the long-term programs are designated, even though the different investments are short-term. Issue Paper No. 147, documents the VOSTF recommendation for Schedule BA reporting. The Task Force discussed the relative benefits between Schedule BA and DA and concluded that WCFIs should be reported as Other Invested Assets and that Schedule BA provides an enhanced disclosure framework deemed more appropriate for the investment.
 - ii. Annual statement lines and RBC charges have already been established on Schedule BA.
 - iii. Capital Adequacy (E) Task Force reviewed the asset class and requires specific designations (relatively low - just slightly higher than a bond of similar credit risk). RBC charges are based on the NAIC SVO WCFI program designation. The current

RBC charges based on program designation would not be functional if the reporting was moved to Schedule DA, because that schedule does not include designations which are needed for RBC.

Review of Items Proposed for Inclusion in SSAP No. 105:

20. On December 7, 2019, the Working Group exposed substantive revisions to SSAP No. 105 to incorporate industry revisions to program requirements, as previously directed by the Working Group during the 2019 Summer National Meeting.

21. The substantive revisions to SSAP No. 105 that were exposed for comment reflected the following elements:

- a. Functionally Equivalent Foreign Regulators - Removed the requirement that the SVO determine if the International Finance Agent is the functional equivalent of the U.S. Regulator. Removing this element was supported by the SVO, which noted that determining functional equivalence is not an analytical issue.
- b. Commingling Prohibitions - Removed the finance agent prohibitions on commingling. Removal of this requirement was supported by the SVO. SVO staff noted if commingling were not a requirement it would consider commingling risk, when present, as a structural deficiency and balance it against the requirement that the Finance Agent be NAIC 1 or NAIC 2.
- c. Investor Rights Edit - Removed duplicative text regarding exercise of investor rights. This revision was to improve readability and eliminate redundancy.
- d. Requirements for filer to Certify Perfected Interest – Removed requirements, with revisions allowing the SVO to determine if a first priority perfected interest in accordance with uniform commercial code (UCC) requirements for each annual submission has been obtained. In deciding to make this revision the following key points were deemed relevant:
 - i. It was noted that the SVO staff has indicated that UCC first priority perfected interest criteria are typically determined when contracting a program and similar objectives can be accomplished in more ways than the UCC lien process. Requiring the UCC lien process was viewed as overly prescriptive.
 - ii. The definition in SSAP No. 105 of a confirmed supplier receivable requires a first priority perfected interest and, SVO analytical staff should be able to determine if first priority interest has been achieved
- e. Finance Agent Validation Requirements – The independent review requirements were broadened to allow independent review of the finance agent by either audit or through one of two types of internal control report. This is a lower threshold, than the existing requirements, but one that still provides some type of independent program review.
- f. Default Date - Changed the default provisions from 15 to 30 days so the default date and the cure period are consistent. This has the effect of changing the date of nonadmission for an investment in default for a period up to 30 days instead of up to 15 days. Key discussion points are:
 - i. Waiting 30 days for a short-term asset can be material in relation to the life of the asset.

- ii. Fifteen (15) days was previously chosen to be consistent with settlement guidance in *SSAP No. 21—Other Admitted Assets*, which nonadmits and reclassifies receivables for securities not settled within 15 days.
- iii. The “cure period” on confirmed supplier receivables is not to exceed 30 days, therefore, the Working Group agreed that it may make sense for the default date and the end of the cure period to be consistent.

22. At the 2020 Spring National Meeting, the Working Group reviewed the issue paper and the January 2020 comments on the exposed item. Comments received from industry advocated for inclusion of the four items that the Working Group opted to exclude from the additional revisions to the revised Statement. Key elements noted in the industry comments included the following:

- a. Absent all 10 of the industry proposed revisions, investments in working capital finance programs will remain low.
- b. Industry advocated that its proposed credit substitution mechanism to allow unrated subsidiaries was suitable for NAIC implementation to allow not only lower rated subsidiaries but also un-rated subsidiaries. The commenters maintained that the absence of mention of non-rated subsidiaries as acceptable obligors, did not preclude them from allowing unrated obligors. However, the current SSAP No. 105 program requirements explicitly require obligors to be of high credit quality.
- c. The industry comments advocated that lower rated investments should be allowed as the as statutory risk-based capital requirements reflect investment quality decisions in capital calculations.
- d. The industry comments advocated that domiciliary regulator prior approval for investment is a transfer of transaction review from staff to state insurance departments. The commenters noted that when, if regulators are concerned about the asset class, they can uniformly limit investment as a whole. Given the high costs to a small industry investor, coupled with the fact that dealers would unlikely choose to document such investments bilaterally with small industry investors, already limits access to the assets to large industry investors (see final action in paragraph 23).
- e. The industry commented that Schedule BA reporting is both cumbersome and expensive and in the view of the industry commenters, the more appropriate schedule would be Schedule DA.

23. During the 2020 Spring National Meeting, after considering the interested parties’ comments, the Working Group identified the revisions as a substantive change, re-exposed revisions to SSAP No. 105, and exposed this Issue Paper. On May 20, 2020, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions to *SSAP No. 105—Working Capital Finance Investments* and *Issue Paper 163: Working Capital Finance Investment Updates* with an additional modification discussed on the call. As part of the May 20, 2020 adoption action, the Working Group and designated an effective date for the revisions of June 30, 2020

- a. The modification removed this sentence from SSAP No. 105R, paragraph 16, “Initial permission to invest in Working Capital Finance Investment Programs may be required by the domiciliary commissioner.” Accordingly, the related discussion in Issue Paper No. 163 was also updated.

- b. This modification was part of the original request from industry and was recommended by a regulator member of the Working Group who noted that it may be confusing to regulators and cause extra work which would be duplicative since these programs are also subject to SVO office review. Therefore, the Working Group adopted 7 of the 10 industry modifications.
- c. The Working Group also directed notification of the revisions to the Valuation of Securities (E) Task Force.

RELEVANT STATUTORY ACCOUNTING

24. Existing guidance in *SSAP No. 105—Working Capital Finance Investments*.
25. *SSAP No. 20—Nonadmitted Assets* was amended by SSAP No. 105 to allow working capital finance investments as admitted assets to the extent they conform to the requirements of SSAP No. 105.
 4. Consistent with paragraph 2, the following assets shall be nonadmitted:

- a. Deposits in Suspended Depositories—Amounts on deposit with suspended depositories may not be fully recoverable. Any amounts not reasonably expected to be recovered shall be written off in accordance with SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets (SSAP No. 5R). Amounts in excess of that written off shall be nonadmitted as they are not available to satisfy obligations to policyholders;

- b. Bills Receivable Not for Premium and Loans Unsecured or Secured by Assets That Do Not Qualify As Investments—In accordance with SSAP No. 5R, amounts determined to be uncollectible or otherwise impaired shall be written off. Amounts in excess of that written off are not considered to be properly collateralized as there are no underlying assets which would otherwise be admitted assets. Such amounts shall be nonadmitted as they may be of questionable economic value if needed to fulfill policyholder obligations. Receivables arising from working capital finance programs designated by the Securities Valuation Office are subject to the guidance in SSAP No. 105;

(Rest of paragraph omitted for brevity)

26. *Purposes and Procedures Manual of the NAIC Investment Analysis Office* provides the following on NAIC Designations:

- a. NAIC 1 is assigned to obligations exhibiting the highest quality. Credit risk is at its lowest and the issuer's credit profile is stable. This means that interest, principal or both will be paid in accordance with the contractual agreement and that repayment of principal is well protected. An NAIC 1 obligation should be eligible for the most favorable treatment provided under the NAIC Financial Regulation Standards and Accreditation Program.
- b. NAIC 2 is assigned to obligations of high quality. Credit risk is low but may increase in the intermediate future and the issuer's credit profile is reasonably stable. This means that for the present, the obligation's protective elements suggest a high likelihood that interest, principal or both will be paid in accordance with the contractual agreement, but there are suggestions that an adverse change in circumstances or economic, financial or business conditions will affect the degree of protection and lead to a weakened capacity to pay. An NAIC 2 obligation should be eligible for relatively favorable treatment under the NAIC Financial Regulation Standards and Accreditation Program.
- c. NAIC 3 is assigned to obligations of medium quality. Credit risk is intermediate and the issuer's credit profile has elements of instability. These obligations exhibit speculative elements. This means that the likelihood that interest, principal or both will be paid in accordance with the contractual agreement is reasonable for the present, but an exposure to an adverse change in circumstances or economic, financial or business conditions would

create an uncertainty about the issuer's capacity to make timely payments. An NAIC 3 obligation should be eligible for less favorable treatment under the NAIC Financial Regulation Standards and Accreditation Program.

- d. NAIC 4 is assigned to obligations of low quality. Credit risk is high and the issuer's credit profile is volatile. These obligations are highly speculative, but currently the issuer has the capacity to meet its obligations. This means that the likelihood that interest, principal or both will be paid in accordance with the contractual agreement is low and that an adverse change in circumstances or business, financial or economic conditions would accelerate credit risk, leading to a significant impairment in the issuer's capacity to make timely payments. An NAIC 4 obligation should be accorded stringent treatment under the NAIC Financial Regulation Standards and Accreditation Program.

Effective Date

27. As issue papers are not represented in the Statutory Hierarchy (see Section IV of the Preamble), the subsequent consideration and adoption of this issue paper will not have any impact of the effective date of the substantive revisions adopted to SSAP No. 105 by the Working Group on May 20, 2020.

Not for Distribution

EXHIBIT A – Substantive Revisions to SSAP No. 105–Working Capital Finance Investments.**Statement of Statutory Accounting Principles No. 105****Working Capital Finance Investments**

SCOPE OF STATEMENT

1. This statement establishes statutory accounting principles for working capital finance investments held by reporting entities. This statement amends *SSAP No. 20—Nonadmitted Assets* (SSAP No. 20) to allow working capital finance investments as admitted assets to the extent they conform to the requirements of this statement.

SUMMARY CONCLUSION

2. Working capital finance investments represent a confirmed short-term obligation¹ to pay a specified amount owed by one party (the obligor) to another (typically a supplier of goods), generated as a part of a working capital finance investment program currently designated by the NAIC Securities Valuation Office. Pursuant to the working capital finance investment program, this short-term obligation has been transferred by the entity entitled to payment (typically a supplier of goods) to a third-party investor.

3. Working capital finance investments held by a reporting entity represent a right of the reporting entity to receive future payment. This Statement provides accounting and reporting guidelines for the right to receive payment under working capital finance programs that meet particular criteria.

Working Capital Finance Program - Definitions and Conditions

4. A “working capital finance program” is an open account program under which an investor may purchase interests, or evidence thereof, in commercial non-insurance receivables. A working capital finance program is created for the benefit of a commercial investment-grade obligor and its suppliers of goods or services, and facilitated by a finance agent.

5. A working capital finance program transfers a right to payment to an investor from a short term obligation and arises from transactions among:

- a. a buyer of goods or services that becomes an obligor to the supplier of goods or services,
- b. the supplier(s) of those goods or services,
- c. a finance agent, and
- d. an investor.

6. A “working capital finance investment” is an interest in payment(s) from a confirmed supplier receivable issued pursuant to a working capital finance program. The payment (maturity) date must not exceed one year from the date of invoice from the supplier to the obligor. This investment is created when

¹ All references to short-term obligations in this statement to refer to obligations not exceeding one year.

the investor purchases from a working capital finance program that is currently designated as NAIC “1” or “2” by the NAIC Securities Valuation Office, any of the following:

- a. One or more confirmed supplier receivables;
- b. in case of a participation, a participation interest in one or more confirmed supplier receivables issued by the finance agent or lead lender holding confirmed supplier receivables; or
- c. a certificate, note or other interest manifestation, documented in a way that is verifiable by regulators, representing a legally enforceable interest in a right to ~~payment~~ payment either directly to the investor or from a trust, other special purpose entity or pool holding confirmed supplier receivables.

7. “Obligor” is the party that purchases the goods or services that generates the original supplier receivable ~~(and which is the payable for that the Obligor)~~. The obligor must be a single entity, which has have an NAIC designation of “1” or “2” or a Credit Rating Provider equivalent. The obligor must confirm the supplier receivable described in paragraph 11 as described in the confirmation process in paragraphs 12-1344.

8. “Supplier” is the party that sells the goods or services to the obligor. The supplier sells the confirmed supplier receivable in accordance with the terms of the working capital finance program designated by the NAIC Securities Valuation Office at a price agreed to by the finance agent and/or investor.

9. “Investor” is the party purchasing a working capital finance investment in accordance with the terms of the working capital finance program designated by the NAIC Securities Valuation Office.

10. The “finance agent” is a bank, financial institution, other financial intermediary, or service provider that facilitates the working capital finance program, arranges the sale, assignment or transfer of the confirmed supplier receivable to the investor for a fee and administers the payment mechanism. In the case of participation, the finance agent must inform the reporting entity investor of a default or event of default as soon as it becomes aware of such default or event of default. For the working capital finance program to qualify under this SSAP, the finance agent must meet the requirements of either paragraph 10.a. or 10.b.:

- a. The finance agent is directly regulated by, or falls under the supervision of, a financial regulator of its domiciliary country provided that such country appears on the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* List of Jurisdictions Eligible for Netting ~~and that the Securities Valuation Office determines that the regulator is the functional equivalent of the Board of Governors of the Federal Reserve System, the Office of the Comptroller of the Currency, or the Federal Deposit Insurance Corporation;~~ or
- b. Payments from the obligor must ~~1) be paid directly to the reporting entity (investor) or into an account maintained by a regulated financial institution for the benefit of investors in the working capital finance program and, in either case, cannot flow through the finance agent cannot be the beneficiary of such payment~~ and 2) there can be no commingling of payments or assets with those of the obligor, supplier, servicer or trust administrator or other investors.

11. A “confirmed supplier receivable” is a first priority perfected security interest or right to payment of a monetary obligation from the obligor arising from the sale of goods or services from the supplier to the obligor the payment of which has been confirmed by the obligor committing and stating that the obligations under the agreement and any payment shall not be affected by the invalidity, unenforceability, existence, performance or non-performance of the underlying commercial trade transaction or any related contract or

undertaking nor that it will not protest, delay, or deny, nor offer nor assert any defenses, personal or otherwise, against payment to the supplier or any party taking claims, interests, or rights to payments made by the supplier.

- a. The confirmed supplier receivable must be sold, assigned or otherwise transferred in a manner that results in an absolute, irrevocable and legally enforceable obligation that has been confirmed by the Obligor.
- b. In the case of a participation, the certificates or other evidence of participation provide an absolute, irrevocable, and legally enforceable obligation of the finance agent or holder of the confirmed supplier receivable to pay to the reporting entity investor all of the amounts due to it under the confirmed supplier receivable, without reduction or delay arising from any claims that the finance agent may have against the reporting entity investor. ~~The reporting entity investor's ability to exercise its rights as creditor, or to direct the finance agent to exercise the rights of a creditor on its behalf, shall not be subject to the discretion of the finance agent or other lenders or investors.~~ The reporting entity investor's ability to exercise its rights as creditor, or to direct the finance agent to exercise the rights of a creditor on its behalf, shall not be subject to, other than during a cure period not to exceed thirty days, the discretion of the finance agent or other lenders or investors.

Confirmation Process

12. In the case of a purchase, the investor shall verify, prior to the sale that the obligor has confirmed the respective amounts, payment dates and related invoice numbers' specified dates and has waived all defenses to payment. In the case of a participation, the finance agent must verify that the obligor has confirmed the respective amounts, payment dates and related invoice reference numbers' specified due dates, and has waived all defenses to payment in accordance with the confirmation process.

13. The obligor must commit and state that upon confirmation of a supplier receivable it is obligated to pay to the investor, the finance agent, or any third party acting as agent or trustee for the investor, a sum equal to the full amount of that confirmed supplier receivable(s) on a date certain stated in the confirmation and that it waives any right of setoff or other defenses to avoid or delay the full and timely payment of that Confirmed Supplier Receivable. The documents establishing the working capital finance program or the confirmation must state and confirm that the obligation to pay must be independent of any other contracts or claims that might be raised in defense arising from any transaction financed in connection with the WCFPWCFI program, the confirmed supplier receivable, or any other courses of performance or courses of dealing with the supplier.

~~14. In the case of participation, the investor must certify that it has a commercially reasonable belief that its participation interest meets the Uniform Commercial Code's standards for creating and preserving first priority security interests in the payments due and in the confirmed supplier receivables. Commercially reasonable belief shall mean the SVO deems the investor's belief reasonable in light of the systems, policies, or practices commonly recognized in the field of investing in participations. The investor must be able to demonstrate to a regulator or to the SVO, upon either's request, the basis for its commercially reasonable belief that the WCFP creates and preserves the investor's ability to enforce a first priority perfected security interest in the confirmed supplier receivables.~~

~~15. In the case of a certificate, note, or other manifestation, capable of verification, representing a right to payment from a trust, other special purpose entity, or special purpose pool holding confirmed supplier receivables, the investor must certify that it has a commercially reasonable belief that the documents establishing and governing the working capital finance program create and preserve interests in the confirmed supplier receivables capable of being enforced by the trustee or other entity holding confirmed supplier receivables as first priority perfected security interests under the Uniform Commercial Code. The~~

~~investor must be able to demonstrate the basis for such belief to a regulator or to the SVO upon either's request. Commercially reasonable belief shall mean the SVO deems the investor's belief reasonable in light of the systems, policies, and practices commonly recognized in the field of investing in securitizations, loan-backed, structured, or trust-issued securities.~~

Program Requirements

~~16.14.~~ The working capital finance program investor must provide in its annual filing with the Securities Valuation Office ~~an annual audit of the consolidated financial statements of which the finance agent is part, which does not report any qualifications related to servicing, and one of the following:~~

- a. An annual independent report according to Statement on Standards for Attestation Engagements (SSAE) No. 16 (or functional equivalent), reporting on controls at a service organization related to the administration of the investment; or
- b. An annual audit of the financial statements and internal controls of the consolidated group of which the finance agent is part, which does not note any material weaknesses related to servicing working capital financial investments.

The NAIC Securities Valuation Office would review the materiality of the report findings in making their determination of the assignment of a designation.

~~17.15.~~ If the credit rating of the working capital finance program or obligor falls to non-investment grade (below the equivalent of NAIC designation "1" or "2"), the reporting entity shall nonadmit, the working capital finance investments obtained under the related working capital finance program and/or the related obligor. Due to the short-term nature of these investments, once an investment is nonadmitted due to the credit rating of the working capital finance program or the obligor, those investments will continue to be nonadmitted.

~~18.16.~~ Reporting entity investors must have the ability to monitor the working capital finance program and the credit-related activities of the obligor. Reporting entity investors must provide information as requested to the state of domicile indicating that they have the ability to monitor on an ongoing basis the activities of the working capital finance program. ~~Initial permission to invest in Working Capital Finance Investment Programs may be required by the domiciliary commissioner.~~

~~19.17.~~ All contracts or agreements that are a part of or that together constitute a working capital finance program must provide that if a dispute arises among any of the parties under any of the contracts or agreements that are a part of or that together constitute the working capital finance program, each party agrees that the dispute will be submitted to a court of competent jurisdiction in the United States or a constituent state thereof or of an alternative dispute resolution process recognized thereby. All contracts or agreements that are a part of or that together constitute a working capital finance program must provide that any dispute arising under any of the contracts or agreements that are a part of or that together constitute the working capital finance program must be resolved pursuant to the laws of the United States or a constituent state thereof that address the substance of the dispute but excluding those laws addressing conflicts of law.

Exclusions

~~20.18.~~ A working capital finance investment excludes any receivables financed through:

- a. Factoring: the purchase of receivables in bulk from a supplier where the receivables represent the payment obligations of potentially thousands of buyers to a single supplier, in which the buyers have no relationship with or contractual obligation to pay the factor and retain all legal defenses to payment they may have against the supplier;

- b. Forfeiting: the purchase of one or a series of receivables from exporters by a forfaiter to enable the exporter (seller) to finance a commercial transaction with a buyer in which the Obligor has no relationship with or contractual obligation to pay the forfaiter and retains all legal defenses to pay it may have against the seller; or
- c. Invoice discounting: the advancement of funds by a finance company to a business entity with the funds advanced limited to a defined percentage of the business entity's eligible and outstanding receivables.

24.19. Eligible Confirmed Supplier Receivables must not:

- a. Include insurance or insurance related assets;
- b. Be impaired or in default at the time of purchase;
- c. Have a payment (maturity) date longer than one year from the date of the invoice from the Supplier to the Obligor giving rise to the confirmed supplier receivable, and the maturity date must not be subject to change or rolling; nor
- d. Include any receivable of any parent or affiliate of the reporting entity investor, and neither the Obligor nor any Supplier may be affiliated with the reporting entity investor. Working Capital Finance Investments that have obligors or vendors that are affiliated with the investor are ineligible, and therefore, nonadmitted assets.

Accounting and Reporting

22.20. The right to receive payment generated by a working capital finance investment issued under a working capital finance program is considered to meet the definition of an asset as defined in *SSAP No. 4—Assets and Nonadmitted Assets*, and is an admitted asset to the extent the investment conforms to the requirements set forth in this Statement and the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*. For programs that comply with all of these elements, working capital finance investments shall be valued and reported in accordance with this Statement, the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*, and the designation assigned in the NAIC Valuations of Securities product. Programs that do not comply with the elements set forth in this Statement, or the provisions set forth in the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* are nonadmitted. Working capital finance investments are reported as other invested assets in the financial statements.

23.21. A working capital finance investment shall be recorded on the trade date. At acquisition, the Working Capital Finance Investment shall be initially reported at cost, excluding brokerage and other related fees, and all other costs (internal costs, or costs paid for origination, purchase or commitment to purchase such investments), which shall be expensed as incurred.

24.22. After initial acquisition, the Working Capital Finance Investment shall be reported at amortized cost until the specified maturity date, unless the investment, or a portion thereof, is deemed uncollectible or when an other-than-temporary impairment has occurred. In the event that a working capital finance investment is purchased by a reporting entity investor at a premium (amount to be received by the entity under the confirmed supplier receivable is less than the price paid for the investment), the excess paid by the reporting entity investor in comparison to the amount receivable under the confirmed supplier receivable must be immediately expensed.

25.23. For reporting entities required to maintain an Interest Maintenance Reserve (IMR), the accounting for realized capital gains and losses from working capital finance investments shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve* (SSAP No. 7). For reporting entities not required to maintain an IMR, realized gains and losses from working capital finance investments

shall be reported as net realized capital gains or losses in the statement of income. For reporting entities not required to maintain an AVR, unrealized gains and losses shall be recorded as a direct credit or charge to unassigned funds (surplus).

~~26-24.~~ A Working Capital Finance Investment may provide for a prepayment penalty or acceleration fee in the event the working capital finance investment is liquidated prior to its scheduled termination date. Such fees shall be reported as investment income when received.

~~27-25.~~ *SSAP No. 34—Investment Income Due and Accrued* shall be followed for determining and recording investment income earned on working capital finance investments acquired at a discount. In accordance with *SSAP No. 34—Investment Income Due and Accrued*, investment income shall be reduced for amounts that have been determined to be uncollectible, however amounts more than 15 days overdue are nonadmitted.

Default

~~28-26.~~ A working capital finance investment payment that is uncollected by the reporting entity within ~~fifteen-thirty~~ days after the due date shall be considered in default and nonadmitted. If the reporting entity has any other working capital finance investment assets from the same defaulting counterparty, all other working capital finance investments from that counterparty shall be nonadmitted. All working capital finance investments from a counterparty identified in default shall be evaluated for impairment.

Impairment

~~29-27.~~ An other-than-temporary impairment^(INT 06-07) shall be considered to have occurred if it is probable that the reporting entity will be unable to collect all amounts due according to the contractual terms of a confirmed supplier receivable including the payment on the established due date. Pursuant to this guidance, assessment of other-than-temporary impairment shall include an evaluation of the financial condition and short-term prospects of the obligor. If it is determined that a decline in the fair value of a working capital finance investment below book/adjusted carrying value is due to an other-than-temporary impairment, an impairment loss shall be recognized as a realized loss equal to the entire difference between the working capital finance investment's carrying value and fair value as of the reporting period for which the assessment is made. Fair value shall be determined in accordance with *SSAP No. 100R—Fair Value* (SSAP No. 100R), and reflect the price to sell the asset in an orderly market between market participants. As such, the fair value shall reflect the assumptions market participants will use in pricing the asset, including assumptions about risk.

~~30-28.~~ For reporting entities required to maintain an AVR/IMR, the entire amount of the realized loss from the other-than-temporary impairment shall be recorded through the AVR, in accordance with SSAP No. 7.

~~31-29.~~ Upon recognition of an other-than-temporary impairment, the fair value of the working capital finance investment on the measurement date shall become the new cost basis of the working capital finance investment and the new cost basis shall not be adjusted for subsequent recoveries in fair value. Once an investment is determined to be other-than-temporarily impaired, until all expected payments are received, the reporting entity must re-evaluate the investment quarterly and reassess fair value, with recognized realized losses for the difference between the book/adjusted carrying value and the current fair value. This process shall continue until either all expected payments are received, or the entity has recognized a realized loss for the entire uncollected carrying value.

Disclosures

~~32-30.~~ The financial statements shall include the following disclosures:

- a. Fair value in accordance with SSAP No. 100R.

- b. Concentrations of credit risk in accordance with SSAP No. 27—Off-Balance-Sheet and Credit Risk Disclosures (SSAP No. 27) in the annual audited statutory financial reports only.
- c. Information regarding the aggregate book/adjusted carrying value of working capital finance investment by designation including gross assets with nonadmitted and net admitted amounts annually. (Note that programs designated 3-6 are nonadmitted.)

	Gross Asset CY	Non-Admitted Asset CY	Net Admitted Asset CY
WCFI Designation 1			
WCFI Designation 2			
WCFI Designation 3			
WCFI Designation 4			
WCFI Designation 5			
WCFI Designation 6			
Total			

- d. Annual and quarterly information regarding the aggregate book/adjusted carrying value maturity distribution on the underlying working capital finance investments by the categories of maturities up to 180 days and 181 to 365 days.
- e. Any events of default of working capital finance investments during the reporting period.

33.31. Refer to the Preamble for further discussion regarding disclosure requirements.

Effective Date and Transition

34.32. This statement is effective for years on or after January 1, 2014. Substantive revisions documented in Issue Paper No. 163—Working Capital Finance Investments Updates are effective for financial reporting periods on or after June 30, 2020. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—Accounting Changes and Corrections of Errors.

- Issue Paper No. 147—Working Capital Finance Investments
- Issue Paper No. 163—Working Capital Finance Investments Updates

Statutory Issue Paper No. 164

Preferred Stock

STATUS

Finalized July 30, 2020

Original SSAP: SSAP No. 32; Current Authoritative Guidance: SSAP No. 32R

Type of Issue:

Common Area

SUMMARY OF ISSUE

1. The guidance within this issue paper introduces substantive revisions to *SSAP No. 32—Preferred Stock* pursuant to the Statutory Accounting Principles (E) Working Group’s (Working Group) Investment Classification Project. The Investment Classification Project reflects a comprehensive review to address a variety of issues pertaining to definitions, measurement and overall scope of the investment statements of statutory accounting principles (SSAPs).
2. The substantive revisions to SSAP No. 32 (illustrated in Exhibit A) under the Investment Classification Project, detailed within this issue paper, reflect the following key elements:
 - a. Improves preferred stock definitions, with inclusion of information from U.S. generally accepted accounting principles (GAAP) for classifying preferred stock as redeemable or perpetual. The revisions also incorporate a new exhibit to capture various terms prevalent in preferred stock.
 - b. Revises the measurement guidance to ensure appropriate, consistent measurement based on the type of preferred stock held and the terms of the preferred stock. The revisions also incorporate guidance for mandatory convertible preferred stock.
 - c. Incorporates revisions to clarify impairment guidance as well as guidance for dividend recognition and redemption of preferred stock with the issuer.

DISCUSSION

3. This issue paper intends to provide information on discussions that occurred when considering revisions to SSAP No. 32 under the Investment Classification Project, as well as the adopted revisions.

Preferred Stock Definitions

4. The historical definition of preferred stock within SSAP No. 32 is “any class or shares of the holders which have any preference, either as to the payment of dividends or distribution of assets on liquidation, over the holder of common stock issued by an entity.” This definition has been identified as generally consistent with market terms, including the following NASDAQ and Financial Accounting Standards Board (FASB) definitions for common stock:
 - a. NASDAQ Definition: A security that shows ownership in a corporation and gives the holder a claim, prior to the claim of common shareholders, on earnings and also generally on assets in the event of liquidation. Most preferred stock pays a fixed dividend that is paid prior to the common stock dividend, stated in a dollar amount or as a percentage of par value. The stock does not usually carry voting rights. Preferred stock has characteristics of both equity and debt.

- b. FASB Codification: A security that has preferential rights compared to common stock.

5. Comments received from interested parties in October 2019 indicated that the term “security” is not interchangeable as it pertains to preferred stock and requested all references be changed to “interest” or directly reference the type of stock under consideration. In review of the use of the term “security” in the issue paper, most instances represent existing references carried over from SSAP No. 32. NAIC staff recognizes that preferred stock is a “security,” as demonstrated by the definitions from both the NASDAQ and FASB, but NAIC staff has proposed some revisions to limit the generic use of the term. The use of the term “security” in paragraph 8, paragraphs 10-13 and in Exhibit A (as it pertains to defining specific types of preferred stock) has been revised to “preferred stock.” The use of the term “security” in paragraph 3 has been retained as this usage mirrors the FASB definition for preferred stock.

6. NAIC staff’s original intent was to align various investment definitions with common industry definitions or those specified by U.S. GAAP. As a part of the investment reclassification project, this practice began with unaffiliated common stock (SSAP No. 30R) and now has expanded into preferred stock (SSAP No. 32). The definition proposed by NAIC staff was made with the understanding that preferred stock is either redeemable or perpetual. While the issue paper does mention some stock labeled as “redeemable perpetual preferred stock,” distinctions are made in the prospectus as to its true underlying characteristics (thus being redeemable or perpetual). In general, NAIC staff continue to believe that for a majority of preferred stock issuances, a share which is redeemable *at the option* of the holder is by definition redeemable *outside (or not solely within)* the control of the issuer – thus the actions are mutually exclusive. However, interested parties cited guidance for additional circumstances in which, through legal technicalities, could create a third class of preferred shares – those redeemable outside the control of the issuer and holder. Since the definition refers to “outside the control of the issuer” as a determination for classifying a preferred share as *redeemable* (reported at amortized cost), certain circumstances which are technically “not solely within the issuer’s control” could cause shares to be reclassified to redeemable which were originally categorized as perpetual (reported at fair value). ASC 480-10 provides a few of these examples as: change in state law, the issuer fails to achieve certain project milestones, the issuer fails to pay specified dividends, the issuer experiences a change in credit rating, etc. As such, NAIC staff are supportive of the changes suggested by interested parties as they align with the original objective of preferred stock classification and reflect the expected economics of the investment.

7. Although the historical definition of preferred stock in SSAP No. 32 is comparable to current market terms, this issue paper recommends revisions to incorporate the NASDAQ definition as it is more encompassing of the characteristics of preferred stocks.

Definitions and Classification as Redeemable or Perpetual Preferred Stock

8. The accounting guidance of SSAP No. 32 varies based on whether preferred stock is considered to be “redeemable” or “perpetual.” The historical definitions of redeemable and perpetual within SSAP No. 32R reflected the following:

- a. Redeemable preferred stock is defined as preferred stock that must be redeemed by the issuing enterprise or is redeemable at the option of the reporting entity. It includes mandatory sinking fund preferred stock and payment-in-kind (PIK) preferred stock.
- b. Perpetual preferred stock is defined as preferred stock with no redemption or sinking fund features or preferred stock redeemable at the option of the issuer.

9. In comparing these terms to current U.S. GAAP, the guidance in the FASB Accounting Standards Codification (ASC), which is also consistent with Securities Exchange Commission (SEC) guidance, is more detailed in identifying the requirements for classification as redeemable preferred stock:

- a. Preferred Stock Subject to Mandatory Redemption Requirements or Whose Redemption is Outside the Control of the Issuer ("Redeemable Preferred Stock"). The term means any stock which (i) the issuer undertakes to redeem at a fixed or determinable price on the fixed or determinable date or dates, whether by operation of a sinking fund or otherwise; (ii) is redeemable at the option of the holders, or (iii) has conditions for redemption which are not solely within the control of the issuer, such as stocks which must be redeemed out of future earnings. Under this definition, preferred stock which meet one or more of the above criteria would be classified as redeemable preferred stock regardless of their other attributes such as voting rights, dividend rights or conversion features. (FASB ASC 480-10-S99)
- b. Preferred Stocks Which Are Not Redeemable or Are Redeemable Solely at the Option of the Issuer ("Non-Redeemable Preferred Stock"). The term means any preferred stock which does not meet the criteria for classification as a "redeemable preferred stock." (FASB ASC 480-10-S99)

10. In reviewing these definitions, and preferred stock components that permit payment of dividends in stock instead of cash (known as payment-in-kind (PIK) stock), it was identified that preferred stock that incorporates PIK dividends is not limited to redeemable preferred stock as implied in the prior SSAP No. 32 definition for redeemable preferred stock.

11. To ensure classification of redeemable and perpetual preferred stock consistently with U.S. GAAP, the definitions from the FASB ASC have been incorporated into the revised SSAP No. 32.

Definition of Restricted Stock:

12. The historical accounting guidance in SSAP No. 32 included a definition of restricted stock as “a security for which sale is restricted by governmental or contractual requirement (other than in connection with being pledged as collateral) except where that requirement terminates within one year or if the holder has the power by contract or otherwise to cause the requirement to be met within one year.” This definition identified that “any portion of the security that can be reasonably expected to qualify for sale within one year is not considered restricted.”

13. In researching this restricted stock definition, it was identified that this guidance was included in the original codification of SSAP No. 32, however, there was no identification of the source of this definition from the issue paper. In reviewing current market terms for restricted stock or restricted securities, definitions and information was noted from both NASDAQ and the SEC:

- a. Restricted Stock (NASDAQ): Stock that must be traded in compliance with special SEC regulations concerning its purchase and resale. These restrictions generally result from affiliate ownership, merger and acquisition (M&A) activity, and underwriting activity.
- b. Restricted Securities (SEC): Securities acquired in an unregistered, private sale from the issuing company or from an affiliate of the issuer. They typically bear a “restrictive” legend clearly stating that you may not resell them in the public marketplace unless the sale is exempt from the SEC’s registration requirements. Rule 144 under the Securities Act of 1933 provides the most commonly used exemption for holders to sell restricted securities. To take advantage of this rule, you must meet several conditions, including a six-month or one-year holding period.

14. Using the information from both NASDAQ and the SEC, a revised definition of restricted stock has been incorporated into the revised SSAP No. 32. Additionally, the revisions clarify that restricted stock is generally an admitted asset but highlights that nonadmittance could occur in accordance with *SSAP No. 4—Assets and Nonadmitted Assets*. Under SSAP No. 4, the restrictions limiting use of an asset can be

determined to preclude the ability to consider the asset as available for policyholder claims. In such situations, the restricted asset would be considered nonadmitted.

Definitions or Preferred Stock Components / Characteristics

15. The historical guidance in SSAP No. 32 included definitions for a couple of preferred stock terms, including “mandatory sinking fund” and “step-up preferred stock,” but did not include definitions of other common preferred stock components or terms. Furthermore, in reviewing the previously included terms, it was identified that they were no longer current and should be revised or removed from SSAP No. 32. For example, the definition of “mandatory sinking fund” included references to preferred stock outstanding in 1978, and the definition of “step-up preferred stock” referred to the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*, and there is no current accounting or valuation guidance for step-up preferred stock in that Manual.

16. Rather than include a variety of terms in the body of the SSAP, particularly as components may not impact overall accounting and reporting of the preferred stock, a new exhibit has been included to include a glossary of key preferred stock terms. The definitions intend to capture current market-terms for the noted components.

Accounting and Reporting of Preferred Stock

17. The historical guidance in SSAP No. 32 captured different accounting and reporting provisions based on whether the preferred stock was classified as redeemable or perpetual, and whether the reporting entity maintained an Asset Valuation Reserve (AVR). Although these classifications are still considered appropriate, it has been noted that additional guidance is needed for mandatory convertible preferred stock, and that a review of the various measurement methods permitted (by classification) should occur to ensure appropriate measurement in the financial statements. Specifically, the prior guidance in SSAP No. 32 explicitly permitted “cost” as an applicable measurement method, even for perpetual preferred stock. Consistent with prior conclusions from U.S. GAAP, as well as the Statutory Accounting Principles (E) Working Group, “historical cost” is generally not an acceptable measurement method. Particularly, this measurement method is not acceptable when liquidation of an asset would generally occur at market prices, such as a non-redeemable (perpetual) preferred stock.

18. The changes reflected in the revised SSAP No. 32 continue to differentiate accounting and reporting guidance by whether a reporting entity maintains an AVR and on the type of preferred stock (redeemable or perpetual). However, revisions have been incorporated to clarify the accounting and reporting of mandatory convertible preferred stock and to update the measurement basis for each type of preferred stock:

- a. For redeemable preferred stock, the revisions continue to use NAIC designations in determining the measurement method. There was no change proposed to the measurement basis per designation. However, the revisions clarify that the measurement basis shall be either amortized cost or fair value based on NAIC designation, eliminating reference to “cost” as a measurement method that could be used by a reporting entity. For the amortization of redeemable preferred stock, revisions have also been incorporated to clarify that amortization (or accretion) of any discount or premium is reported through investment income, instead of impacting dividends collected. Recognizing this amortization through investment income is consistent with U.S. GAAP.
- b. For perpetual preferred stock, the revisions have eliminated use of NAIC designations in determining measurement method and the guidance requires use of fair value, not to exceed any stated call price from the prospectus of the preferred stock. As there are no requirements for an issuer to redeem these securities, these securities can continue indefinitely until the issuing entity reacquires the preferred stock at current market rates or elects to buy-back the preferred stock in accordance with rates established in the preferred

stock prospectus. In order to prevent overstatement of the securities in the financial statements, the measurement of these preferred stocks reflects fair value, not to exceed any currently effective¹ buy-back rates (call prices) that the issuer can utilize to redeem the stock. This measurement guidance is not impacted by the type of reporting entity (AVR or non-AVR filer) and is not impacted by NAIC designation. Although not impacted by NAIC designation, this guidance does not change the requirement to report the NAIC designation as the NAIC designation impacts the risk-based capital (RBC) charge attributed to the preferred stock.

- c. For mandatory convertible preferred stock, guidance has been incorporated to require measurement at fair value, not to exceed any stated call price, in the periods prior to conversion. This guidance is applicable regardless if the preferred stock would be classified as redeemable or perpetual and is applicable regardless of NAIC designation. This guidance requires the preferred stock to be measured at the same measurement basis that would be required once converted to common stock. This prevents overstatement in the financial statements at the time of conversion.
- d. For exchange traded funds which qualify for preferred stock treatment from the NAIC SVO, the revisions clarify that these investments shall always be treated as perpetual preferred stock. This classification is appropriate as the fund would not qualify as a redeemable preferred stock with a stated term that allows for amortization.

Impairment of Preferred Stock

19. The prior guidance in SSAP No. 32 included different guidance for determining other-than-temporary impairment (OTTI) based on whether the preferred stock was redeemable or perpetual. Although this division has been retained, modifications have been reflected as follows:

- a. For redeemable preferred stock, guidance has been captured to require assessment of OTTI whenever mandatory redemption rights or sinking fund requirements do not occur. Although preferred stock may indicate “required” elements, failing to provide dividends, or contribute to a sinking fund, may not be considered an act of default or require liability recognition from the issuer. Not receiving preferred stock provisions does not turn the holder of preferred stock into a creditor, and a redemption right cannot force a company to redeem shares. However, if an issuer fails to comply with “required” components, reporting entities should assess whether the preferred stock is other-than-temporarily impaired.
- b. For perpetual preferred stock, the other-than-temporary impairment guidance has been revised to mirror guidance for other equity investments (e.g., common stock). As perpetual preferred stock will be reported at fair value, upon recognition of an OTTI, any unrealized losses will be realized, and the-then current fair value will become the new cost basis. Subsequent variations in fair value are treated as unrealized gains or losses.
- c. Comments received from interested parties noted that proposed impairment guidance for perpetual preferred stock could be enhanced if written similar to existing impairment guidance in *SSAP No. 30R—Unaffiliated Common Stock*. Final proposed language in Exhibit A mimics the language in SSAP No. 30R.

¹ Interested parties noted that call dates may not be effective for a period of time. As such, language regarding that only “currently effective” buy back rates (call prices) was added.

Preferred Stock Income / Redemption

20. The guidance in this issue paper incorporates revisions to clarify the reporting of dividend income from preferred stock. This guidance clarifies that dividends shall be recognized in the form received (cash, preferred stock, common stock), at fair value, with differences between fair value and the dividend receivable recognized as gains or losses. Subsequent to initial recognition, the asset received shall follow the applicable statutory accounting statement. For example, dividends received in the form of common stock shall be captured in *SSAP No. 30R—Unaffiliated Common Stock*.

21. Additionally, this issue paper incorporates new guidance to clarify the reporting when preferred stock is reacquired or redeemed by the issuing entity. Pursuant to this guidance, regardless of how an issuer reacquires the stock (either at market value or pre-set call / redemption price), the reporting entity would recognize any difference between the book/adjusted carrying value and the consideration received as a realized gain or loss.

Disclosures

22. Although this issue paper incorporates various accounting and reporting changes for preferred stock, there have been no revisions incorporated to the existing disclosure requirements.

Effective Date

23. The adoption of this issue paper by the Statutory Accounting Principles (E) Working Group, and the substantively revised statement of statutory accounting principles (SSAP) occurred on July 30, 2020. The substantive revisions to SSAP No. 32R are detailed in Exhibit A of this issue paper and reflected in the substantively-revised *SSAP No. 32R—Preferred Stock*. The effective date of the guidance will be identified in the SSAP. Users of the *Accounting Practices & Procedures Manual* should note that issue papers are not represented in the Statutory Hierarchy (see Section IV of the Preamble) and therefore the conclusions reached in this issue paper should not be applied until the corresponding SSAP has been adopted by the Plenary of the NAIC.

RELEVANT STATUTORY ACCOUNTING AND GAAP GUIDANCE

Statutory Accounting

- *SSAP No. 32R—Preferred Stock*

EXHIBIT A - REVISIONS TO SSAP No. 32—Preferred Stock**Preferred Stock****SCOPE OF STATEMENT**

1. This statement establishes statutory accounting principles for preferred stock.
2. Investments in preferred stock of entities captured in SSAP No. 97—Investments in ~~Subsidiaries, e~~Controlled or ~~Affiliated e~~Entities or SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies¹, including as well as preferred stock interests of certified capital companies (CAPCO) per INT 06-02: Accounting and Reporting for Investments in a Certified Capital Company (CAPCO) are included within the scope of this statement. The requirement to file investments in preferred stock of certain subsidiaries, controlled or affiliated entities with the NAIC pursuant to SSAP No. 97 does not affect the application of the accounting, valuation or admissibility under this statement. In addition to the provisions of this statement, preferred stock investments in SCAs are also subject to the provisions of SSAP No. 25—Affiliates and Other Related Parties and SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities.

SUMMARY CONCLUSION

3. Preferred stock which may or may not be publicly traded, is a security that represents ownership of a corporation and gives the holder a claim prior to the claim of common stockholders on earnings and also generally on assets in the event of liquidation. Most preferred stock pays a fixed dividend that is paid prior to the common stock dividend, stated in a dollar amount or as a percentage of par value. Preferred stock does not usually carry voting rights. Preferred stock has characteristics of both common stock and debt, defined as any class or series of shares the holders of which have any preference, either as to the payment of dividends or distribution of assets on liquidation, over the holder of common stock (as defined in SSAP No. 30R—Unaffiliated Common Stock) issued by an entity. Preferred stock shall include but not be limited to:

- a. Redeemable preferred stock, which is preferred stock subject to mandatory redemption requirements or whose redemption is at the option of the holders. Redeemable preferred stock is any stock which 1) the issuer undertakes to redeem at a fixed or determinable price on the fixed or determinable date or dates, whether by operation of a sinking fund or otherwise; or 2) is redeemable at the option of the holders. Preferred stock which meet one or more of these criteria would be classified as redeemable preferred stock,² regardless of other attributes such as voting rights or dividend rights, including mandatory sinking fund preferred stock and preferred stock redeemable at the option of the holder;
- b. Perpetual preferred stock, which is preferred stocks which are not redeemable or for which redemption is not at the option of the holder (non-redeemable preferred stock). Perpetual preferred stock is any preferred stock which does not meet the criteria to be classified as redeemable preferred stock pursuant to paragraph 3.a, including nonredeemable preferred stock and preferred stock redeemable at the option of the issuer; and

¹ Certain legal entities captured in SSAP No. 48, such as LLCs that are corporate-like, do not issue preferred stock in legal form, but instead issue identical instruments labeled preferred units, interests, or shares. These instruments shall be captured in this statement provided they meet the structural characteristics as defined in paragraph 3. Additionally, these instruments shall not be in-substance common stock in which the holder has risk and reward characteristics that are substantially similar to common stock.

² Preferred stock shall be classified by its characteristics. For example, a preferred stock that is named “redeemable perpetual preferred stock” shall be reported as either “redeemable” or “perpetual” preferred stock based on whether the characteristics of paragraph 3.a. are met.

4. The definition of preferred stock, as defined in paragraph 3, does not include fund investments. However, the following types of SVO-identified investments are captured within scope of this statement.

e.a. Exchange Traded Funds, which qualify for preferred stock treatment, as identified in Part Three of the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* and published on the SVO's web page at www.naic.org. SVO-identified preferred stock ETFs shall follow the accounting provisions for perpetual preferred stock.

~~4. Redeemable preferred stock is defined as preferred stock that must be redeemed by the issuing enterprise or is redeemable at the option of the reporting entity. It includes mandatory sinking fund preferred stock and payment in kind (PIK) preferred stock.~~

~~5. Mandatory sinking fund preferred stock is defined as redeemable preferred stock subject to a 100% mandatory sinking fund, annual installments of which will (a) commence not more than 10 years from the date of issue or December 31, 1978, if outstanding on that date; (b) be not less than 2% of the number of shares issued (or outstanding on December 31, 1978, if issued prior to that date); (c) provide for the redemption of the entire issue over a period not longer than 40 years from the date of issue, or December 31, 1978, if outstanding on that date. Redeemable preferred stock which is subject to a 100% mandatory sinking fund, but which does not, at date of issue or December 31, 1978, if outstanding at that time, meet one or more of the other requirements above, shall be considered as mandatory sinking fund preferred stock at the time the deficiency is cured through the passage of time or otherwise.~~

~~6. PIK preferred stock is defined as redeemable preferred stock on which, at the option of the issuer, dividends can be paid in additional securities rather than cash.~~

~~7. Perpetual preferred stock is defined as preferred stock with no redemption or sinking fund features or preferred stock redeemable at the option of the issuer.~~

~~8.5. Restricted preferred stock is defined³ as a security either redeemable or perpetual preferred stock that must be traded in compliance with special Securities Exchange Commission (SEC) regulations concerning its purchase and resale. These restrictions generally result from affiliate ownership, merger and acquisition (M&A) activity and underwriting activity. Pursuant to the SEC, restricted securities are securities acquired in an unregistered, private sale from the issuing company or from an affiliate of the issuer. They typically bear a "restrictive" legend clearly stating that the holding may not resell the stock in the public marketplace unless the sale is exempt from the SEC's registration requirements. Restricted preferred stock is generally considered an admitted asset; however, admittance may be limited based on the degree of restriction in accordance with *SSAP No. 4—Assets and Nonadmitted Assets*. Restricted preferred stock shall be coded as restricted in the investment schedule and disclosed pursuant to *SSAP No. 1—Accounting Policies, Risks & Uncertainties, and Other Disclosures* for which sale is restricted by governmental or contractual requirement (other than in connection with being pledged as collateral) except where that requirement terminates within one year or if the holder has the power by contract or otherwise to cause the requirement to be met within one year. Any portion of the security that can be reasonably expected to qualify for sale within one year is not considered restricted.~~

~~9.6. Preferred stocks meet the definition of assets as defined in *SSAP No. 4—Assets and Nonadmitted Assets* and are admitted assets to the extent they conform to the requirements of this statement, *SSAP No. 25* and *SSAP No. 97*.~~

³ This definition of restricted stock does not preclude a "restricted asset" classification for any preferred stock that is restricted (e.g., not under the exclusive control of the entity) by actions of the reporting entity or others. For example, if a reporting entity has pledged preferred stock, or used preferred stock in securities lending / repo transactions, the preferred stock shall be coded and disclosed as restricted stock pursuant to *SSAP No. 1—Accounting Policies, Risks & Uncertainties and Other Disclosures*.

Acquisitions and Sales

~~10.7.~~ At acquisition, preferred stock shall be reported at cost, including brokerage and other related fees. ~~PIK Preferred~~ stock received as dividends shall be recorded at fair value. Acquisitions and dispositions shall be recorded on the trade date. Private placement stock transactions shall be recorded on the funding date.

~~11.8.~~ A reporting entity can subscribe for the purchase of stock, but not be required to make payment until a later time. Transactions of this nature are common in the formation of corporations. Preferred stock acquired under a subscription represents a conditional transaction in ~~which a security preferred stock is~~ authorized for issuance but not yet actually issued. Such transactions are settled if and when the actual ~~security preferred stock~~ is issued and the exchange or National Association of Securities Dealers (NASD) rules that the transactions are to be settled. Preferred stock acquired under a subscription shall be recorded as an admitted asset when the reporting entity or its designated custodian or transfer agent takes delivery of the ~~security preferred stock~~ and the ~~security preferred stock~~ is recorded in the name of the reporting entity or its nominee, (i.e., the accounting for such preferred stock acquisitions shall be on the settlement date).

Amortization

~~12.9.~~ Redeemable preferred stock purchased at a premium shall be amortized to reduce the carrying value to the call or redemption value over the period to the call or earliest redemption date, whichever produces the lowest asset value (yield to worst). Redeemable preferred stock purchased at a discount shall be ~~amortized~~ accreted to increase the carrying value to ~~par value~~ the redemption price over the period to maturity or the latest redemption date.

~~13.~~ PIK preferred stock shall be amortized to the lower of the call price or par value, measured in either case at the end of the stock dividend period and based on all of the shares expected to be held at the end of that period, including those received as dividends.

~~14.10.~~ Amortization (and accretion) of the premium and discount arising at acquisition shall be calculated using the interest method and shall be reported ~~through investment income~~ as increases or decreases in dividends collected during the year.

Balance Sheet Amount

~~15.~~ The NAIC Securities Valuation Office assigns preferred stocks NAIC designations (NAIC designation 1 through 6) in accordance with the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*, and that NAIC designation is published in accordance with the SVO compilation instructions in the *Purposes and Procedures Manual*.

~~16.11.~~ Preferred stock shall be valued based on (a) the underlying characteristics ~~of the security~~ (redeemable, ~~or perpetual or mandatory convertible~~), (b) the quality rating ~~of the security~~ expressed as an NAIC designation pursuant to paragraph 15, and (c) whether an asset valuation reserve (AVR) is maintained by the reporting entity:-

a. For reporting entities that do not maintain an AVR:

~~17.~~ Step up preferred stock (a security with the structure of a preferred stock, that has the cash flow characteristics of a debt instrument) is considered a security with characteristics of both debt and equity, and the accounting and valuation of such securities shall be consistent with SVO guidelines as stipulated in the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*.

~~18.~~ For reporting entities required to maintain an AVR, the accounting for unrealized gains and losses shall be in accordance with *SSAP No. 7 Asset Valuation Reserve and Interest Maintenance Reserve*. For reporting entities not required to maintain an AVR, unrealized gains and losses shall be recorded as a direct credit or charge to unassigned funds (surplus).

Reporting Entities That Do Not Maintain An AVR

- ~~19.i. Highest-quality or high-quality redeemable preferred stocks (NAIC designations 1 and 2), which have characteristics of debt securities, shall be valued at cost or amortized cost. All other redeemable preferred stocks (NAIC designations 3 to 6) shall be reported at the lower of cost, amortized cost, or fair value.~~
- ~~20.ii. Highest quality or high quality pPerpetual preferred stocks (NAIC designations 1 and 2), which have characteristics of equity securities, shall be reported at fair value, not to exceed any currently effective call price. All other perpetual preferred stocks (NAIC designations 3 to 6) shall be reported at the lower of cost or fair value.~~
- iii. Mandatory convertible preferred stocks (regardless if the preferred stock is redeemable or perpetual) shall be reported at fair value, not to exceed any currently effective call price, in the periods prior to conversion. Upon conversion to common stock, these securities shall be in scope of SSAP No. 30R.
- iv. For preferred stocks reported at fair value, unrealized gains and losses shall be recorded as a direct credit or charge to unassigned funds (surplus)
- b. For reporting entities that maintain an AVR:

Reporting Entities That Do Maintain An AVR

- ~~21.i. Highest-quality, high-quality or medium quality redeemable preferred stocks (NAIC designations 1 to 3), which have characteristics of debt securities, shall be valued at cost or amortized cost. All other redeemable preferred stocks (NAIC designations 4 to 6) shall be reported at the lower of cost, amortized cost, or fair value.~~
- ~~22.ii. Highest quality, high quality or medium quality pPerpetual preferred stocks (NAIC designations 1 to 3), which have characteristics of equity securities, shall be valued at fair value, not to exceed any currently effective call price. All other perpetual preferred stocks (NAIC designations 4 to 6) shall be reported at the lower of cost or fair value.~~
- iii. Mandatory convertible preferred stocks (regardless if the preferred stock is redeemable or perpetual) shall be reported at fair value, not to exceed any currently effective call price, in the periods prior to conversion. Upon conversion to common stock, these securities shall be in scope of SSAP No. 30R.
- iv. For preferred stocks reported at fair value, the accounting for unrealized gains and losses shall be in accordance with SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve.

Impairment of Redeemable Preferred Stock

~~23.12. An other-than-temporary^(INT 06-07) impairment shall be considered to have occurred if it is probable that the reporting entity will be unable to collect all amounts due according to the contractual terms of the security preferred stock in effect at the date of acquisition. An assessment of other-than-temporary impairment shall occur whenever mandatory redemption rights or sinking fund requirements do not occur.~~ A decline in fair value which is other-than-temporary includes situations where the reporting entity has made a decision to sell the preferred stock security prior to its maturity at an amount below its carrying value (i.e., amortized cost). If it is determined that a decline in the fair value of a redeemable preferred stock

is other-than-temporary, an impairment loss shall be recognized as a realized loss equal to the entire difference between the redeemable preferred stock's carrying value and its fair value, not to exceed any currently effective call price, at the balance sheet date of the reporting period for which the assessment is made. The measurement of the impairment loss shall not include partial recoveries of fair value subsequent to the balance sheet date. For reporting entities required to maintain an AVR, realized losses shall be accounted for in accordance with SSAP No. 7.

~~24.13.~~ In periods subsequent to the recognition of other-than-temporary impairment loss for a redeemable preferred stock, the reporting entity shall account for the other-than-temporarily impaired preferred stock security as if the preferred stock security had been purchased on the measurement date of the other-than-temporary impairment, ~~and in accordance with paragraph 19 or paragraph 21, as applicable~~. The fair value of the redeemable preferred stock on the other-than-temporary impairment measurement date shall become the new cost basis of the redeemable preferred stock and the new cost basis shall not be adjusted for subsequent recoveries in fair value. The discount or reduced premium recorded for the preferred stock security, based on the new cost basis, shall be amortized over the remaining life of the preferred stock security in the prospective manner based on the amount and timing of future estimated cash flows. The preferred stock security shall continue to be subject to impairment analysis for each subsequent reporting period. Future declines in fair value which are determined to be other-than-temporary shall be recorded as realized losses.

Impairment of Perpetual Preferred Stock

~~25.14.~~ If it is determined that a decline in the fair value of a perpetual preferred stock is For any decline in the fair value of perpetual preferred stock, which is determined to be other-than-temporary ^(INT 06-07), the perpetual preferred stock shall be written down to fair value as the new cost basis and the amount of the write down shall be accounted for as a realized loss. ~~an impairment loss shall be recognized as a realized loss equal to the entire difference between the perpetual preferred stock's carrying value and its fair value at the balance sheet date of the reporting period for which the assessment is made. The measurement of the impairment loss shall not include partial recoveries of fair value subsequent to the balance sheet date. For reporting entities required to maintain an AVR, realized losses shall be accounted for in accordance with SSAP No. 7. Subsequent fluctuations in fair value shall be recorded as unrealized gains or losses. Future declines, which are determined to be other-than-temporary, shall be recognized as realized losses. A decline in fair value which is other-than-temporary includes situations where the reporting entity has made a decision to sell a preferred stock security at an amount below its carrying value.~~

~~26.~~ In periods subsequent to the recognition of an other than temporary impairment loss for a perpetual preferred stock, the reporting entity shall account for the other than temporarily impaired security as if the security had been purchased on the measurement date of the other than temporary impairment, and in accordance with paragraph 20 or paragraph 22, as applicable. The fair value of the perpetual preferred stock on the measurement date shall become the new cost basis of the perpetual preferred stock and the new cost basis shall not be adjusted for subsequent recoveries in fair value. Future declines in fair value which are determined to be other than temporary, shall be recorded as realized losses.

Income

~~27.15.~~ Dividends on preferred stock (whether cumulative or noncumulative), other than mandatorily redeemable preferred stock, shall be recorded as investment income for dividend-eligible preferred stock on the ex-dividend date with a corresponding receivable to be extinguished upon dividend settlement receipt of cash (i.e., dividend income shall be recorded on preferred stock declared to be ex-dividend on or prior to the statement date). Dividends received shall be recognized in the form received (e.g., cash, preferred stock, common stock) at fair value with differences between fair value and the dividend receivable recognized as gains or losses. Subsequent treatment shall follow the statement that addresses the type of asset received. For example, dividends received in the form of common stock shall be accounted for and reported in accordance with SSAP No. 30R.

Redemption of Preferred Stock

16. A reporting entity that sells or redeems preferred stock back to the issuer shall recognize consideration received in excess of the book/adjusted carrying value as a realized gain or loss. This recognition shall occur regardless of whether the issuer repurchases the preferred shares at market value, or if the shares are redeemed by the issuer at a predetermined set call price.

~~28. Dividends on mandatorily redeemable preferred stock shall be accrued to the redemption price, even if not declared, using the interest method over the period ending on the redemption date.~~

~~29. Cash dividends paid on PIK stock during the stock dividend period shall be accounted for as a reduction in the investment.~~

Exchanges and Conversions

~~30.~~17. If preferred stock is exchanged or converted into other securities, the fair value of the preferred stock surrendered at the date of the exchange or conversion shall become the cost basis for the new securities with any gain or loss realized at the time of the exchange or conversion. However, if the fair value of the securities received in an exchange or conversion is more clearly evident than the fair value of the preferred stock surrendered, then it shall become the cost basis for the new securities.

Disclosures

~~31.~~18. The following disclosures regarding preferred stocks shall be made in the financial statements:

- a. Fair values in accordance with *SSAP No. 100R—Fair Value*;
- b. Concentrations of credit risk in accordance with *SSAP No. 27*;
- c. Basis at which the preferred stocks are stated; and
- d. A description, as well as the amount, of preferred stock that is restricted and the nature of the restriction.
- e. For each balance sheet presented, all preferred stocks in an unrealized loss position for which other-than-temporary declines in value have not been recognized
 - i. The aggregate amount of unrealized losses (that is, the amount by which cost or amortized cost exceeds fair value) and
 - ii. The aggregate related fair value of preferred stocks with unrealized losses.
- f. The disclosures in (i) and (ii) above should be segregated by those preferred stocks that have been in a continuous unrealized loss position for less than 12 months and those that have been in a continuous unrealized loss position for 12 months or longer using fair values determined in accordance with *SSAP No. 100R*.
- g. As of the date of the most recent balance sheet presented, additional information should be included describing the general categories of information that the investor considered in reaching the conclusion that the impairments are not other-than-temporary.
- h. When it is not practicable to estimate fair value, the investor should disclose the following additional information, if applicable, as of each date for which a statement of financial position is presented in its annual financial statements:

- iii. The aggregate carrying value of the investments not evaluated for impairment, and
- iv. The circumstances that may have a significant adverse effect on the fair value.

~~32-19.~~ Refer to the Preamble for further discussion regarding disclosure requirements. The disclosure requirements of paragraphs ~~3+18.b.~~, ~~3+18.e.~~, ~~3+18.f.~~, ~~3+18.g.~~ and ~~3+18.h.~~ shall be included in the annual audited statutory financial reports only.

Relevant Literature

~~33-20.~~ This statement rejects *ASU 2018-03, Recognition and Measurement of Financial Assets and Financial Liabilities*, *ASU 2016-01, Financial Instruments – Overall*, *FASB Statement No. 115, Accounting for Certain Investments in Debt and Equity Securities* and *FASB Emerging Issues Task Force No. 86-32, Early Extinguishment of a Subsidiary’s Mandatorily Redeemable Preferred Stock*. This statement adopts *FASB Staff Position 115-1/124-1, The Meaning of Other-Than-Temporary Impairment and Its Application to Certain Investments*, paragraph 16, with modification to be consistent with statutory language in the respective statutory accounting statements.

Effective Date and Transition

~~34-21.~~ This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. The guidance in paragraphs 23-26 was previously included within *SSAP No. 99—Accounting for Securities Subsequent to an Other-Than-Temporary Impairment* and was effective for reporting periods beginning on January 1, 2009, and thereafter, with early adoption permitted. In 2010, the guidance from *SSAP No. 99* was incorporated within the impacted standards, with *SSAP No. 99* superseded. The original impairment guidance included in this standard, and the substantive revisions reflected in *SSAP No. 99* are retained for historical purposes within *Issue Paper No. 131*. The guidance in paragraphs 2 and 3 to *SSAP No. 32* was originally superseded January 1, 2005, by guidance included in *SSAP No. 88—Investments in Subsidiaries, Controlled and Affiliated Entities, A replacement of SSAP No. 46*, and then subsequently reflected in *SSAP No. 97*. In 2011, the guidance related to preferred stock of SCAs from *SSAP No. 97* was incorporated into this statement and revised to reflect a definition of preferred stock. The original guidance included in this statement, and the substantive revisions reflected in *SSAP No. 88* and *SSAP No. 97* (including the title change already reflected in *SSAP No. 32*) are retained for historical purposes within *Issue Paper Nos. 32* and *118*. Guidance in paragraph 17 was originally contained in *INT 99-29: Classification of Step-Up Preferred Stock* and was effective December 6, 1999.

22. On July 30, 2020, substantive revisions, as detailed in *Issue Paper No. 164—Preferred Stock* were adopted. These revisions, effective January 1, 2021, update definitions of preferred stock and reporting values based on characteristics of the preferred stock.

EXHIBIT A – GLOSSARY

Callable Preferred Stock – A preferred stock in which the issuer has the right to call or redeem the stock at a preset price after a defined date. Callable preferred stock can be either redeemable preferred stock or perpetual preferred stock depending on other characteristics of the preferred stock. For example, callable preferred stock with a maturity or a specific buyback date would be redeemable preferred stock, whereas callable preferred stock electable at the discretion of the issuer is perpetual preferred stock.

Convertible Preferred Stock – A preferred stock that is convertible into another security based on a conversion rate. For example, convertible preferred stock that is convertible into common stock on a two-for-one basis (two shares of common for each share of preferred).

Cumulative Preferred Stock – A preferred stock with a provision that missed dividend payments must be paid to cumulative preferred shareholders before other classes of preferred stock shareholders and common shareholders can receive dividend payments. Cumulative preferred stock may have different levels, with a “first” or “senior” cumulative preferred, “regular” cumulative preferred and “subordinate” cumulative preferred that determines the priority in which accumulated unpaid dividends or asset liquidation occurs. (Under SSAP No. 32R, holders of cumulative preferred stock are not permitted to recognize a receivable for unpaid cumulative dividends until declared and the reporting entity is entitled to the dividend.)

Dividend Declaration Date – The date a corporation declares a dividend payment to its shareholders.

Dividend Record Date – The date that identifies the shareholders that are entitled to a declared dividend.

Dividend Payment Date – The date the declared dividend will be paid.

Ex-Dividend Date – The cut-off date of holding stock to be captured as a shareholder on record entitled to the dividend. (A shareholder that sells their stock on the ex-dividend date would continue to be identified as a shareholder on record entitled to a declared dividend. Anyone who acquires a stock on the ex-dividend date would not be a shareholder on record entitled to a declared dividend.)

Mandatory Redeemable Preferred Stock – A preferred stock that embodies an unconditional obligation requiring the issuer to redeem the instrument by transferring its assets at a specified or determinable date (or dates) or upon an event that is certain to occur. (The existence of a mandatory redemption right does not convert the holder of a preferred stock into a creditor, and an issuer may be prohibited from redeeming shares when redemption would cause an impairment of capital.)

Noncumulative Preferred Stock – A preferred stock that does not entitle the stockholder to accumulated unpaid dividends. After missing dividend payments, a corporation only has to make current dividend payments to preferred stock holders before providing dividends to common stock holders.

Participating Preferred Stock – A preferred stock that gives the holder participation in the additional earnings of a business or liquidation rights in addition to the normal preferred stock dividend. Pursuant to the terms of the preferred stock, the participation rights may only be activated when income or operations of the issuer exceeds a certain threshold level.

Payment-in-kind (PIK) – A term of the preferred stock prospectus that identifies that dividends may take the form of securities (e.g., common stock) rather than cash.

Perpetual Preferred Stock - Preferred stocks which are not redeemable or are redeemable solely at the option of the issuer. Perpetual preferred stock is any preferred stock which does not meet the criteria to be classified as redeemable preferred stock.

Preferred stock - A security, which may or may not be publicly traded, that shows ownership of a corporation and gives the holder a claim, prior to the claim of common stockholders on earnings and also generally on assets in the event of liquidation.

Redeemable Preferred Stock - Preferred stock subject to mandatory redemption requirements or whose redemption is outside the control of the issuer. Redeemable preferred stock is any stock which 1) the issuer undertakes to redeem at a fixed or determinable price on the fixed or determinable date or dates, whether by operation of a sinking fund or otherwise; 2) is redeemable at the option of the holders; or 3) has conditions for redemption which are not solely within the control of the issuer, such as stock which must be redeemed out of future earnings. Preferred stock which meet one or more of these three criteria is redeemable preferred stock regardless of other attributes such as voting rights or dividend rights.

Restricted Preferred Stock - Redeemable or perpetual preferred stock that must be traded in compliance with special SEC regulations concerning its purchase and resale. These restrictions generally result from affiliate ownership, M&A activity and underwriting activity. Pursuant to the SEC, restricted securities are securities acquired in an unregistered, private sale from the issuing company or from an affiliate of the issuer. They typically bear a “restrictive” legend clearly stating that the holding may not resell the stock in the public marketplace unless the sale is exempt from the SEC’s registration requirements.

Sinking Fund – A potential component of a preferred stock charter that requires the issuer to regularly set funds aside in a separate custodial account for the exclusive purpose of redeeming preferred stock shares. Failure of an issuer to provide to the sinking fund does not create an act of default. Rather, the stock charter may implement provisions for failing to provide to the sinking fund, which could include penalties, restrictions of providing common stock dividends or the repurchase of the preferred stock.

Step-Up Preferred Stock – A potential component of a preferred stock charter that identifies whether specific terms will increase over time or with stated provisions. For example, a “step-up dividend” is a feature that increases the dividend rate. A “step-up call” is a feature that increases the call price. A “step-up conversion” increases the conversion price.

Term Preferred Stock – Preferred stock with a mandatory redemption requirement (maturity date) captured in the definition of redeemable preferred stock.

Appendix F

Policy Statements

Introduction

The policy statements contained within Appendix F are not included within the Statutory Hierarchy and thus should not be considered accounting guidance. As such, each policy statement is included for informational purposes only.

NAIC Policy Statement on Maintenance of Statutory Accounting Principles

1. Statutory accounting principles (SAP) provide the basis for insurers to prepare financial statements to be filed with and utilized by state insurance departments for financial regulation purposes. Accuracy and completeness of such filings are critical to meaningful solvency monitoring. Accordingly, maintenance of SAP guidance for changes in the industry and changes in regulatory concerns is vital to preserving the usefulness of SAP financial statements.

2. The promulgation of new or revised SAP guidance by the NAIC ultimately requires action of the entire NAIC membership. Responsibility for proposing new or revised SAP guidance will be delegated through the NAIC committee structure to the Accounting Practices and Procedures (E) Task Force (Task Force). The Task Force will charge the Statutory Accounting Principles (E) Working Group (Working Group) with the exclusive responsibility to develop and propose new statements of statutory accounting principles (SSAPs), to revise existing SSAPs, and to issue interpretations.

Composition of the Statutory Accounting Principles (E) Working Group

3. The chair of the Task Force shall determine membership of the Working Group subject to approval by the Financial Condition (E) Committee. The Working Group shall be limited in size to no more than 15 members and will include representation from the four zones of the NAIC. Membership shall be vested in the state (until such time as the membership may be changed) but continuity of individuals, to the extent possible, is extremely desirable.

Development of New or Substantively Revised SSAPs

4. New SSAPs will be developed to address, but will not be limited to: 1) concepts not previously addressed by a SSAP and that do not fit within the scope of an existing SSAP; 2) concepts that fit within the scope of an existing SSAP, but the Working Group elects to supersede existing SSAPs and 3) existing concepts that warrant significant revisions. Substantively-revised SSAPs will be developed to address, but will not be limited to: 1) concepts that fit within the accounting topic of an existing SSAP, but have not been addressed by the Working Group; 2) changes to the valuation and/or measurement of an existing SSAP; and 3) modifications to the overall application of existing SSAPs. The decision to undertake development of a new or substantively revised SSAP will rest with the Working Group. New or substantively revised SSAPs will have a specified effective date.

5. Research and drafting of new or substantially revised SSAPs will be performed by NAIC staff under the direction and supervision of the Working Group which may enlist the assistance of interested parties and/or consultants with requisite technical expertise as needed or desired. The first step in developing new and substantively revised SSAPs will commonly be the drafting of an issue paper, which will contain a summary of the issue, a summary conclusion, discussion, and a relevant literature section. Public comments will be solicited on an issue paper (at least one exposure period), and at least one public hearing will be held before the issue paper is converted to a SSAP. Upon approval by the Working Group, all proposed SSAPs will be exposed for public comment for a period commensurate with the length of the draft and the complexities of the issue(s). After a hearing of comments, adoption of new or substantively revised SSAPs (including any amendments from exposure) may be made by simple majority. If no comments are received during the public comment period, the Working Group may adopt the proposal collectively (one motion/vote) with other non-contested positions after the opportunity is given during the hearing to separately discuss the proposal. All new and substantively revised SSAPs must be on the agenda for at least one public hearing before presentation to the Task Force for consideration. Adoption by the Task Force, its parent and the NAIC membership shall be governed by the NAIC bylaws.

6. The Working Group may, by a super majority vote (7 out of 10 members, 8 out of 11 or 12, 9 out of 13, 10 out of 14, and 11 out of 15) elect to: 1) combine the IP and SSAP process, resulting in concurrent exposure of the two documents; 2) expose and adopt revisions to a SSAP prior to the drafting/adoption of the related IP; and/or 3) forego completion of an IP and only proceed with revisions to a substantively revised SSAP.

7. If accounting guidance, reserving standards, asset valuation standards, or any other standards or rules affecting accounting practices and procedures are first developed by other NAIC working groups, task forces, subcommittees, or committees, such proposed guidance, standards or rules shall be presented to the Working Group for consideration. In cases where such guidance has already been subjected to substantial due process (e.g., public comment periods and/or public hearings), the Working Group may elect to shorten comment periods and/or eliminate public hearings, and in such cases, will notify the Task Force of these actions.

Development of Nonsubstantive Revisions to SSAPs

8. Nonsubstantive revisions to SAP will be developed to address, but will not be limited to: 1) clarification of the intent or application of existing SSAPs; 2) new disclosures and modification of existing disclosures; 3) revisions that do not change the intent of existing guidance; and 4) revisions to *Appendix A—Excerpts of NAIC Model Laws* to reflect amendments to NAIC adopted model laws and regulations. Research and drafting of nonsubstantive revisions will be performed by NAIC staff under the direction and supervision of the Working Group. Public comment will be solicited on nonsubstantive revisions, and the item will be included on the agenda for at least one public hearing before the Working Group adopts nonsubstantive revisions. Nonsubstantive revisions are considered effective immediately after adoption by the Working Group, unless the Working Group incorporates a specific effective date. If comments are not received during the public comment period, the Working Group may adopt the proposal collectively (one motion/vote) with other “non-contested” positions after opportunity is given during the hearing to separately discuss the proposal. At its discretion, the Working Group may request that an issue paper be drafted for nonsubstantive revisions in order to capture historical discussion and adopted revisions. Adoption of nonsubstantive revisions by the Task Force, its parent and the NAIC membership shall be governed by the NAIC bylaws.

Development of Interpretations to SSAPs and Referencing Interpretations Within SSAPs

9. Interpretations will be developed to address, but will not be limited to issues requiring timely application or clarification of existing SAP, which shall not amend, supersede or conflict with existing, effective SSAPs. Issues being considered as an interpretation must be discussed at no less than two open meetings. (Original introduction of the issue when the Working Group identifies the intent to address the issue as an “interpretation” during a public discussion is considered the first open meeting discussion.) The process must allow opportunity for interested parties to provide comments, but as interpretations are intended to provide timely responses to questions of application or interpretation and clarification of guidance, no minimum exposure timeframe is required.

10. The voting requirement to adopt an interpretation is a simple majority. As interpretations do not amend, supersede or conflict with existing SSAP guidance, the interpretation is effective upon Working Group adoption unless specifically stated otherwise. The Working Group shall report the adopted interpretation to the Task Force as part of its public report during the next NAIC national meeting (or earlier if applicable). Interpretations can be overturned, amended or deferred only by a two-thirds majority of the Task Force membership.

11. In rare circumstances, the Working Group may adopt an interpretation which creates new SAP or conflicts with existing SSAPs. Historically, these interpretations temporarily modified statutory accounting principles and/or specific disclosures were developed in response to nationally significant events (e.g., Hurricane Sandy, September 11, 2001). In order to adopt an interpretation that creates new

SAP or conflicts with existing SSAPs, the Working Group must have 67% of its members voting (10 out of 15 members) with a super majority (7 out of 10, 8 out of 11 or 12, 9 out of 13, 10 out of 14, or 11 out of 15) supporting adoption. These interpretations can be adopted, overturned, amended or deferred only by a two-thirds majority of the Task Force membership.

12. As new SSAPs are developed, it is essential to review and, if necessary, update the status of interpretations related to SSAPs that are being replaced and/or new SSAPs being developed. The following options are available to the Working Group when a SSAP with existing interpretations is replaced:

- a. **Interpretation of the new SSAP** - If the Working Group would like to maintain the interpretation, the new SSAP can be added to the list of statements interpreted by the interpretation. In addition, the status section of the new SSAP will list the interpretation number next to the heading "Interpreted by."
- b. **Nullification** - When an interpretation is nullified by a subsequent SSAP or superseded by another interpretation, the interpretation is deemed no longer technically helpful, is shaded and moved to Appendix H (Superseded SSAPs and Nullified Interpretations), and the reason for the change is noted beneath the interpretation title. The status section of the SSAP describes the impact of the new guidance and the effect on the interpretation (for example, nullifies, incorporated in the new SSAP with paragraph reference, etc.).
- c. **Incorporation** - When an interpretation is incorporated into a new SSAP, the Working Group can choose from the following two options:
 - i. If the interpretation only interprets one SSAP, then the interpretation is listed as being nullified under the "affects" section of the SSAP and is not referenced under the "interpreted by" section of the status page of the SSAP.
 - ii. If the interpretation references additional SSAPs, and the Working Group intends to maintain the guidance, the interpretation is unchanged (no nullification). The new SSAP (Summary of Issue section) reflects that the interpretation issue has been incorporated into the new statement.

NAIC Policy Statement on Comments to GAAP & IFRS Exposure Drafts

1. As expressed in the Statement of Concepts, statutory accounting principles (SAP) utilize the framework established by U.S. Generally Accepted Accounting Principles (GAAP). The NAIC's guidance on SAP (defined in the *Accounting Practices and Procedures Manual*) is comprehensive for those principles that differ from GAAP based on the concepts of statutory accounting. Those GAAP pronouncements that are not applicable to insurance companies will not be adopted by the NAIC. GAAP pronouncements that do not differ from SAP may specifically be adopted by the NAIC to be included in statutory accounting. GAAP pronouncements do not become part of SAP until and unless adopted by the NAIC. Future SAP pronouncements will specifically identify any GAAP pronouncements that are to be included in SAP whether in whole, in part, or with modification as well as any GAAP pronouncements that are rejected. Future GAAP pronouncements, which SAP has not yet addressed, shall not be considered as providing authoritative statutory guidance.

2. As stated in the previous paragraph, the NAIC believes it is important to comment on GAAP exposure drafts that will affect SAP before such guidance is finalized. Exposing potentially contentious issues to the applicable GAAP bodies before completion will create a more efficient and effective maintenance process for the Statutory Accounting Principles (E) Working Group (Working Group). In addition, this allows the NAIC to be proactive to GAAP rather than reactive under the current system. The NAIC also believes that there may be instances in which it is important to comment on exposure drafts of the International Financial Reporting Standards (IFRS). This is particularly important on projects in which U.S. FASB and the International Accounting Standards Board (IASB) are attempting to converge, or to limit differences between U.S. GAAP and IFRS.

3. Comments on exposed GAAP pronouncements or IFRS exposure drafts will be developed at the discretion of the Working Group chair. After a comment letter has been agreed to by the Working Group, the chairs of the Accounting Practices and Procedures (E) Task Force and the Financial Condition (E) Committee must review and approve the comment letter before it is sent to the applicable standard board. Every reasonable attempt will be made to provide an adequate comment period to interested parties; however, FASB and IFRS deadlines may inhibit exposure in every instance. The chairs will consider factors such as comment deadline and level of controversy surrounding the issue. The chair of the parent task force or committee may override such a decision at any time.

4. Comment letters submitted to the FASB on GAAP exposure drafts may be considered when the Working Group is reviewing finalized GAAP pronouncements (as defined in the *NAIC Policy Statement on Maintenance of Statutory Accounting Principles*). Nevertheless, these letters will not bind the Working Group to its tentative position during its deliberation to adopt, modify or reject the final GAAP guidance.

NAIC Policy Statement on Statutory Accounting Principles Maintenance Agenda Process

1. The purpose of this policy statement is to document the Statutory Accounting Principles (E) Working Group (Working Group) maintenance agenda process.
2. As acknowledged in the NAIC *Policy Statement on Maintenance of Statutory Accounting Principles*, the promulgation of statutory accounting principles (SAP) guidance will be delegated through the NAIC committee structure to the Accounting Practices and Procedures (E) Task Force (Task Force). The Task Force will charge the Working Group with the responsibility to develop and propose new statements of statutory accounting principles (SSAPs), to propose revisions to existing SSAPs, and to issue interpretations in response to questions of application and clarification on existing SSAPs.
3. Information and issues can be presented to the Working Group in a variety of ways. Issues can be recommended or forwarded from 1) other NAIC committees, task forces or working groups; 2) interested parties; 3) interested regulators; and 4) NAIC staff. Also, if any guidance within the Generally Accepted Accounting Principles (GAAP) Hierarchy (see § V of the Preamble to the *Accounting Practices and Procedures Manual* (AP&P Manual)) is added or revised, those changes must be considered by the Working Group for potential revisions to SAP. In order for an issue to be placed on the **Pending Listing**, the recommending party must complete a Statutory Accounting Principles Maintenance Agenda Submission Form (Form A) and submit it to the Working Group support staff no later than 20 business days prior to the next scheduled Working Group meeting. NAIC staff will prepare a submission form for all GAAP pronouncements that have not been previously addressed by the Working Group. NAIC staff will update the **Pending Listing** before each national meeting and will notify the recommending party of such action. If the Working Group does not wish to address the issue (e.g., issue deemed not applicable to statutory accounting) or rejects the position presented, then the Working Group may move the item to the **Rejected Listing**. Should the Working Group choose to address an issue, it is moved to the **Active Listing** where it is prioritized and categorized as a **Substantive**, **Nonsubstantive** or **Interpretation** agenda item.
4. The **Active Listing** identifies agenda items that are in the process of development and includes the following:
 - a. **Substantive:** These agenda items address the development of new SSAPs and substantially revised SSAPs as defined in the NAIC *Policy Statement on Maintenance of Statutory Accounting Principles*.
 - b. **Nonsubstantive:** These agenda items address the development of nonsubstantive revisions to SAP as defined in the NAIC *Policy Statement on Maintenance of Statutory Accounting Principles*.
 - c. **Interpretations:** These agenda items address the development of interpretations to SAP as defined in the NAIC *Policy Statement on Maintenance of Statutory Accounting Principles*. If SSAP revisions are subsequently deemed necessary, the Working Group shall re-categorize the agenda item as either substantive or nonsubstantive, as applicable, and follow the appropriate process to consider and adopt revisions.
5. After review of the agenda item (including any interested party comments), at its discretion, the Working Group makes the ultimate determination of whether an agenda item is categorized (or re-categorized) as substantive (either as a new SSAP or substantively-revised SSAP), nonsubstantive or an interpretation.
6. The **Rejected Listing** identifies items that were proposed to the Working Group and rejected without consideration. The **Disposition Listing** includes all agenda items considered by the Working

Group and provides the conclusions and guidance given for all adopted revisions to SAP and for all agenda items disposed without modification to SAP.

7. It should be noted that this policy statement addresses the process and the flow of information. The timing is left to the discretion of the Working Group. For instance, once public discussion requirements have been met, as detailed in the NAIC *Policy Statement on Maintenance of Statutory Accounting Principles*, the Working Group can take action on an item at its discretion. In determining whether it is appropriate to take specific actions (including adoption), the Working Group must consider when the last exposure period occurred, and the extent of any prior comments received and discussions held. Additionally, there is no timeframe in which items must be addressed. Items will remain on the Active Listing until formally disposed of by the Working Group.

8. NAIC staff will maintain the following on the Working Group Web page (http://naic.org/cmt_e_app_sapwg.htm): 1) A blank Form A (Attachment A to this policy statement); 2) The current Maintenance Agenda, and 3) Current substantive, nonsubstantive and/or interpretation revisions exposed for public comment. Attachment B to this policy statement will be attached to all exposures with proposed substantive revisions and serves as the request for written comment and notice of a public hearing.

Correction of Editorial Errors

9. Over time, during review and publication of the AP&P Manual, NAIC staff may identify inadvertent editorial errors and necessary revisions to the content of the Manual. These are editorial in nature and include grammatical errors, reference changes (i.e., paragraphs, SSAPs, and Model Laws and Regulations) and formatting issues. To aid in correcting these items and improve the overall usefulness of the AP&P Manual, the Working Group has implemented the following process:

- a. At each meeting of the Working Group, if NAIC staff have identified (or have been informed by interested parties or regulators) any grammatical errors, reference changes and/or formatting issues, NAIC staff will present a public memorandum to the Working Group outlining the proposed amendments to the AP&P Manual. These corrections are not intended to clarify or revise existing guidance and as such, do not ordinarily warrant the use of a Form A or addition to the Maintenance Agenda.
- b. After presentation to the Working Group, the memorandum will be exposed for a public comment period. If no objections are raised by the Working Group, interested regulators or interested parties, the revisions will be considered “noncontested” and presented to the Working Group for adoption. Upon adoption, the revisions will be incorporated into the AP&P Manual, with the revisions being posted on the “Updates to the AP&P Manual” secure Web page. Under this process, these revisions will be shown as tracked changes to the Manual unless otherwise noted in the memorandum.
- c. If objections are raised by the Working Group, interested regulators or interested parties, the proposed revisions will either be rejected without further discussion or incorporated into a Form A to be presented to the Working Group and subsequently exposed for a public comment period. Under this process, the revisions will follow the Maintenance Agenda process as outlined in this policy statement.

EXPOSURE DRAFT NUMBER - TITLE**Notice of Public Hearing and Request for Written Comments****Hearing Date:** _____**Location:** _____**Deadline for Written Notice of Intent to speak:****Deadline for Receipt of Written Comments:**

Basis for hearings. The Statutory Accounting Principles (E) Working Group (Working Group) will hold a public hearing to obtain information from and views of interested individuals and organizations about the standards proposed in this Exposure Draft. The Working Group will conduct the hearing in accordance with the *National Association of Insurance Commissioners (NAIC) Policy Statement on Open Meetings*. An individual or organization desiring to speak must notify the NAIC in writing by _____. Speakers will be notified as to the date, location and other details of the hearings.

Oral presentation requirements. The intended speaker must submit a position paper, a detailed outline of a proposed presentation or comment letter addressing the standards proposed in this Exposure Draft by _____. Individuals or organizations whose submission is not received by this date will only be granted permission to present at the discretion of the Working Group chair. All submissions should be addressed to NAIC staff at the address listed below. Comments can also be submitted by electronic mail to _____@naic.org.

Format of hearings. Speakers will be allotted up to 10 minutes for their presentations to be followed by a period for answering questions from the Working Group. Speakers should use their allotted time to provide information in addition to their already submitted written comments as those comments will have been read and analyzed by the Working Group. Those submissions will be included in the public record and will be available at the hearings for inspection.

Copies. Exposure drafts can be obtained on the Working Group's Web page at http://naic.org/cmte_e_app_sapwg.htm.

Written comments. Participation at a public hearing is not a prerequisite to submitting written comments on this Exposure Draft. Written comments are given the same consideration as public hearing testimony.

The Statutory Accounting Principles Statement of Concepts was adopted by the Accounting Practices & Procedures (EX4) Task Force on September 20, 1994, in order to provide a foundation for the evaluation of alternative accounting treatments. All issues considered by the Working Group will be evaluated in conjunction with the objectives of statutory reporting and the concepts set forth in the Statutory Accounting Principles Statement of Concepts.

The exposure period is not meant to only measure support for, or opposition to, a particular accounting treatment but rather to accumulate an analysis of the issues from other perspectives and persuasive comments supporting them. Therefore, form letters and objections without valid support for their conclusions are not helpful in the deliberations of the Working Group. Comments should register agreement or disagreement with a detailed explanation, a description of the impact of the proposed guidelines, and possible alternative recommendations for accomplishing the regulatory objective.

Any individual or organization may send written comments to _____ by electronic mail in Microsoft Word format to _____@naic.org. After written comments have been reviewed by the Working Group, the letters will be posted publicly on the NAIC website.

National Association of Insurance Commissioners

NAIC Policy Statement on the Impact of Statements of Statutory Accounting Principles on NAIC Publications

1. The purpose of this policy statement is to document the process and procedure for identifying the impact of statements of statutory accounting principles (SSAPs) on NAIC publications.
2. New and revised SSAPs can affect various NAIC publications in different ways. New accounting practices or procedures may result in new disclosures and reporting requirements (affecting annual statement blanks and instructions), modified analysis techniques (affecting RBC formula or IRIS ratios), or new examination procedures (affecting the *Financial Condition Examiners Handbook*).
3. The Statutory Accounting Principles (E) Working Group (Working Group) shall evaluate the impact that newly adopted SSAPs will have on other NAIC publications. To that end, the Working Group shall submit a referral to any group in response to new or revised SSAPs expected to impact other NAIC groups or publications. (Instead of a referral, a blanks proposal may be sponsored by the Working Group and submitted to the Blanks (E) Working Group). These referrals and blanks proposals are only required to be approved by the chair of the Working Group prior to submission to the other groups but may be shared with and approved by all Working Group members.

Not for Distribution

NAIC Policy Statement on Coordination of the Accounting Practices and Procedures Manual and the Annual Statement Blank

1. The purpose of the codification of statutory accounting principles (SAP) project was to produce a comprehensive guide to SAP for use by insurance departments, insurers, and auditors. Statutory accounting principles, as they existed prior to codification did not always provide a consistent and comprehensive basis of accounting and reporting. Insurance companies were sometimes uncertain about what rules to follow and regulators were sometimes unfamiliar with the accounting rules followed by insurers in other states. This was due in part to the fact that prior to codification, accounting guidance could be found in the NAIC *Accounting Practices and Procedures Manual*, annual statement instructions, the *Financial Condition Examiners Handbook*, and various states' laws and regulations. As a result, insurers' financial statements were not prepared on a comparable basis. Now that accounting requirements have been more rigidly stipulated by the NAIC, it is imperative that the accounting requirements and the reporting and disclosure requirements remain synchronized. This is an excellent opportunity to create a system of parallel requirements. This effort has already been recognized by the NAIC/AICPA (E) Working Group. In 1999, the NAIC/AICPA (E) Working Group modified the *Model Regulation Requiring Annual Audited Financial Reports* to require the following for audited financial statements:

Notes to financial statements. These notes shall be those required by the appropriate NAIC annual statement instructions and the NAIC *Accounting Practices and Procedures Manual*. The notes shall include a reconciliation of differences, if any, between the audited statutory financial statements and the annual statement filed pursuant to Section [insert applicable section] of the [insert state] insurance law with a written description of the nature of these differences.

2. As stated in the model regulation, the NAIC/AICPA (E) Working Group has an expectation that the requirements of the annual statement instructions and the *Accounting Practices and Procedures Manual* will be identical in all pertinent parts that are subject to audit. There is no reason to create a different set of audit requirements in the annual statement instructions when a complete and comprehensive guide to statutory accounting exists. However, it must be noted that the statements of statutory accounting principles (SSAPs) are not intended to prescribe the specific format of the detailed financial statements.

3. The scope of this policy statement is defined as follows:

Any change to the annual statement core financials (balance sheet, income statement, cash flow and notes to the financial statements) must be reviewed by the Statutory Accounting Principles (E) Working Group to determine whether it conflicts with the disclosure requirements of the SSAPs.

4. The scope is defined in broad terms because it is very difficult to specify what constitutes a conflict with the SSAPs. For example, the renumbering of the assets page does not conflict because there is not a SSAP that prescribes the order of asset presentation. Contrast this with a seemingly innocuous proposal to modify Schedule P - Part 1 that would create a disclosure conflict with the related SSAP.

5. In order to ascertain that the requirements of the annual statement instructions and blank are in harmony with the SSAPs (as they relate solely to the core financial statements), the following procedures shall be followed:

- a. The Blanks Agenda Item Submission Form will include an interrogatory that will indicate to the Blanks (E) Working Group whether the proposal:
 - i. Affects the core financial statements

- ii. Conflicts with an existing SSAP
 - iii. Is not currently required by a SSAP
 - iv. Has been reviewed by the Statutory Accounting Principles (E) Working Group
- b. NAIC staff supporting the Statutory Accounting Principles (E) Working Group and the Blanks (E) Working Group are charged with verifying the accuracy of the interrogatory proposed in paragraph 5.a.. After NAIC staff review the proposals, they will report their findings back to the applicable groups. If NAIC staff identify issues that need further exploration or consultation, the chairs of the two working groups or certain members from each group will hold a joint meeting.
- c. The Blanks (E) Working Group will reject proposals that will delete/modify information contained within the core financial statements that are required by an existing SSAP.
- d. The Blanks (E) Working Group will either reject proposals that would require additional audited disclosure or audited information within the core financial statements if that same item is not required by an existing SSAP; or move it outside the core financial statements. The sponsoring party will still have the option of placing this information outside the core financial statements (e.g., general interrogatories or interrogatories to schedules) until the disclosure is included in a SSAP. If the disclosure were added to a SSAP in the future, it could be moved to the Notes to the Financial Statements and subject to audit at that time.
- e. The NAIC will maintain a SSAP to annual statement cross-reference. This cross-reference will contain two significant features. First, it will list all of the SSAP disclosures and reference them to where in the annual statement the disclosure requirement is met. Second, the cross-reference will identify the annual statement components that are required by a SSAP. The cross-reference can be used by the Blanks (E) Working Group and interested parties in completing the new Blanks Agenda Item Submission Form Interrogatory.

NAIC Policy Statement on Coordination with the Valuation Manual

1. Proposed changes to the *Valuation Manual* must be consistent with the existing referenced model laws, including the *Standard Valuation Law* (Model #820), and, to the extent determinable, with models in development. To the extent that proposed changes to the *Valuation Manual* could have an impact on accounting and reporting guidance and other requirements as referenced by the *Accounting Practices and Procedures Manual*, proposed changes must be reviewed by the Statutory Accounting Principles (E) Working Group for consistency with the *Accounting Practices and Procedures Manual*, including consistency of implementation dates. The Life Actuarial (A) Task Force or its staff support will prepare a summary recommendation that will include as appropriate an analysis of the impact of proposed changes.

2. If the Statutory Accounting Principles (E) Working Group reaches the conclusion that the proposed changes to the *Valuation Manual* are inconsistent with the authoritative guidance in the *Accounting Practices and Procedures Manual*, The Life Actuarial (A) Task Force will work with the Statutory Accounting Principles (E) Working Group to resolve such inconsistencies prior to implementation.

Not for Distribution

NAIC Policy Statement on Coordination of the Accounting Practices and Procedures Manual and the Purposes and Procedures Manual of the NAIC Investment Analysis Office

1. The purpose of this policy statement is to detail the coordination and collaboration between the Securities and Valuation Office (SVO) and the Statutory Accounting Principles (E) Working Group (Working Group) support staff, the relationship between the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* (P&P Manual) and *Accounting Practices and Procedures Manual* (AP&P Manual) and the expectations of the Valuation of Securities (E) Task Force (VOSTF) and the Working Group.

NAIC Designations Do Not Communicate Statutory Accounting or Reporting

2. The assessment of credit risk for an obligation or asset, as specified in the P&P Manual, is a separate and distinct process from the determination of statutory accounting or reporting under the AP&P Manual. The manner in which an NAIC designation is used within statutory accounting guidance is limited to that, if any, specified in a statement of statutory accounting principle (SSAP) and cannot be derived or implied by language in the P&P Manual. Obtaining an NAIC designation does not change an investment's applicable SSAP, annual or quarterly statement reporting schedule, or override other SSAP guidance required for the investment to be an admitted asset. There are limited instances in which a SSAP specifically identifies, within its scope, the inclusion of specific SVO-identified investments. The SVO review required for an investment to be included on a SVO listing is a separate evaluation process that focuses on the structure of the investment. This process is distinct from the SVO's assessment of an investment's credit risk, which results in a NAIC designation. As stated in the Statutory Hierarchy, Section V of the Preamble, the AP&P Manual is the highest level of authoritative guidance.

Sources and Application of Statutory Accounting Guidance

3. The authority to determine and interpret existing statutory accounting guidance in, or to develop new statutory accounting guidance for, the AP&P Manual, is a charge assigned by the Financial Condition (E) Committee through its Accounting Practices and Procedures (E) Task Force to the Statutory Accounting Principles (E) Working Group. The application of statutory accounting guidance to any specific obligation or asset to determine its status under the AP&P Manual is the obligation of the insurance company and its management. The state of domicile is the final authority with respect to statutory accounting and reporting guidance. Deviations from the authoritative guidance in the Statutory Accounting Hierarchy are reflected as a permitted or prescribed practice.

Impact on SVO Operations

4. Because SVO analytical determinations of credit quality do not convey opinions, conclusions or informational content relative to statutory accounting status, the SVO may assign an NAIC designation to any obligation or asset that is filed by an insurer, provided that its credit quality can be assessed consistently with the policies and methodologies specified in the P&P Manual.

Communication and Coordination Between SVO and SAPWG Staff

5. The following processes are intended to assist optimum communication and coordination between the SVO and SAPWG support staff functions.

- a. Maintain ongoing dialogue regarding investments, investment related SSAPs and relevant developments in the areas assigned to support staff of both groups.

**NAIC Policy Statement on Coordination of the
Accounting Practices and Procedures Manual and the
Purposes and Procedures Manual of the NAIC Investment Analysis Office**

- b. Maintain an ongoing dialogue relative to obligations and assets filed with the SVO, including communications about new types of obligations or assets filed with the SVO and their likely treatment under existing investment related SSAPs.
- c. Maintain an ongoing dialogue relative to new obligations or assets, in which no statutory accounting guidance exists, or uncertainty exists about how current statutory accounting guidance applies to features or characteristics of the obligation or asset.
- d. The NAIC Investment Analysis Office (IAO) and Financial Regulatory Services (FRS) staff shall provide notice to, and consult with, each other when either staff determines that existing technical guidance or procedures administered by the staff are no longer adequate to secure the original regulatory objective for which it was designed. Upon receipt of such notice, both staff will formulate a statement of the issues and, if possible, recommendations, and thereafter coordinate discussion between the SAPWG and the VOSTF consistent with the NAIC procedures and policies that apply to the situation. Such proposed recommendations shall be discussed consistent with the NAIC open meetings policy and any revisions to the authoritative guidance will be exposed for comment for a period of time commensurate with the significance of the change, to provide a formal forum for interested parties and regulators to provide input and allow for adequate due process.
- e. Situations in which NAIC staff (SVO or FRS) are contacted directly with questions on statutory accounting application, it shall be noted that opinions of NAIC staff are not authoritative and are based on the information provided and existing authoritative statutory accounting guidance. Information and issues can be submitted to the SAPWG for consideration, as detailed in the *NAIC Policy Statement on Statutory Accounting Principles Maintenance Agenda Process*.

Appendix G

Implementation Guide for the Annual Financial Reporting Model Regulation

Introduction

The new requirements within the Annual Financial Reporting Model Regulation (Model) related to auditor independence, corporate governance and internal control over financial reporting became effective in 2010. The Implementation Guide (Guide) is being published to assist companies in planning and preparing for compliance with the new requirements.

The Guide is intended to supplement the Model, not to create additional requirements, by providing interpretive guidance and clarifying the meaning of terms used in the Model. Such guidance is important to ensure common understanding between insurers and regulators and to memorialize the intent of the changes. Because issues and questions will occur from time-to-time, by placing the Guide outside of the Model, maintenance can be achieved in a cost-effective way without reopening the Model especially when the issue under consideration is an interpretation of the requirements. The Guide should not be viewed as a requirement of complying with the *Accounting Practices and Procedures Manual*.

Maintaining the Guide

The responsibility of developing and maintaining the Guide resides with the NAIC/AICPA (E) Working Group with changes to the Guide following the NAIC regulatory due process. The Guide resides as an informational appendix to the NAIC *Accounting Practices and Procedures Manual* (AP&P Manual). The AP&P Manual was selected as the logical repository since the Guide provides instruction about compliance with the Model, which directly relates to financial reporting and statutory accounting.

The regulatory due process for modifying this Guide requires the NAIC/AICPA (E) Working Group to send adopted proposals to the Accounting Practices and Procedures (E) Task Force for adoption and inclusion in the AP&P Manual. If the Accounting Practices and Procedures (E) Task Force recommends substantive changes to the proposal received from the NAIC/AICPA (E) Working Group, the proposal should be returned to the NAIC/AICPA (E) Working Group for further deliberation.

Table of Contents

The Table of Contents for the Guide mirrors that of the Model. However, not all sections of the Model require interpretive guidance. Consequently, only those sections containing guidance are contained in the Guide. The presentation of the Guide is organized by the section title with the section number of the Model appearing after the title.

Title	Section	Page
Definitions	3	2
General Requirements Related to Filing and Extensions for Filing of Annual Audited Financial Reports and Audit Committee Appointment	4	4
Qualifications of Independent Certified Public Accountant	7	4
Communication of Internal Control Related Matters Noted in an Audit	11	10
Requirements for Audit Committees	14	11
Management's Report of Internal Control over Financial Reporting	17	13
Exemptions and Effective Dates	18	17
Appendix 1	17	22

Definitions (Section 3)

Certain terms and definitions contained in the Model need no further explanation. The Guide provides additional information for preparers and users for some definitions to facilitate their understanding.

“Audited financial report” (D), differs from the term “financial statements” in that the Audited financial report (see Section 5 of the Model) includes the financial statements plus the report of the independent certified public accountant. “Financial statements,” therefore, excludes the report of the independent certified public accountant.

“Group of insurers” (H), as intended for use in the Model is to recognize the variety of structures that may exist. Companies within a holding company structure, or other set of insurers identified by management, may often share common management, systems or processes. Consequently, when management asserts to the effectiveness of their internal controls, it is appropriate to make such an assertion for those companies based upon the organization management determines to be most relevant to meet the reporting requirements. Because holding company structures, and other groups of insurers, can be complex and organized to meet corporate objectives, that structure may not align with the organizations that are responsible for managing and preparing the financial statements of the insurer. The Model provides flexibility to insurers to identify a “Group of insurers” for purposes of evaluating the effectiveness of their internal control over financial reporting. In determining the appropriate scope and level of testing for systems that are shared by a group of insurers, management is not required to expand the scope or perform additional testing that would be redundant for each legal entity included within the group of insurers. To the extent that a specific internal control or system is unique to and has a material impact on the preparation of the audited statutory financial statements of a legal entity included in a group of insurers and the legal entity exceeds the premium thresholds contained in Section 17, that control or system is to be included in management's evaluation of internal controls.

A “Group of insurers” that has been granted approval to file audited statutory consolidated or combined financial statements of a group of insurers (as described in Section 8) may set the scope and level of testing for purposes of determining effectiveness of internal controls over financial reporting consistent with the basis on which the audited statutory financial statements for the Group are prepared (i.e., at the combined or consolidated level).

The following example is intended to illustrate various ways that a “Group of insurers” could be determined. The example is not intended to be limiting in any way. Rather, it is intended to show the flexibility to be in compliance with the Model. Insurers are encouraged to notify the Commissioner of its initial “Group of insurers” and any subsequent changes to such group.

1. “Group of insurers” could be established at the ultimate parent level, i.e., one report of the effectiveness of internal controls for all insurers in the group—insurance companies 1-6.
2. Two “Group of insurers” could be established at the holding company level, i.e., holding company A and B. In this case, a separate report would be required for holding company A, holding company B, and if it met the reporting threshold, insurance company 4 since it is not in either group.
3. Two “Group of insurers” could be established based upon the type of insurance company, i.e., LA&H companies 1, 4 and 6 could be one group and HMO companies 2 and 3 in the second group. In this case, a separate report would be required for the LA&H companies, the HMO companies and if it met the reporting threshold, insurance company 5 since it is not in either group.
4. Two “Group of insurers” could be established based upon the way the entities are managed. For example, companies, 1, 2, 3 and 5 have the same management while companies 4 and 6 have common management.
5. If management elects not to identify a “Group of insurers” for purposes of evaluating the effectiveness of internal control over financial reporting then each reporting entity meeting the reporting requirements of Section 17 would prepare such a report.

“Internal control over financial reporting” (I), as defined in the Model is intended to have the same meaning as understood in the public sector to comply with the requirements of the Sarbanes-Oxley Act of 2002. Because some terms might not be fully defined and to avoid misunderstanding, this Guide attempts to clarify such terms. For example, the word “reliability” used in the phrase “reliability of financial statements” has the same meaning as that contained in the generally accepted accounting principles (GAAP) framework, Statement of Financial Accounting Concepts Two. This Statement is referenced in the Preamble, Part III, paragraph 24 of the AP&P Manual.

General Requirements Related to Filing and Extensions for Filing of Annual Audited Financial Reports and Audit Committee Appointment (Section 4)

Section 4D stipulates that each insurer required to file an annual Audited financial report pursuant to the Model shall designate a group of individuals as constituting its Audit committee. Section 4D further states that the Audit committee of an entity that controls an insurer may be deemed to be the insurer’s Audit committee for purposes of this regulation at the election of the controlling person. The definition of Audit committee in Section 3 of the Model references Section 14E for exercising this election. However, a disclaimer within Section 14 of the Model indicates that the section shall not apply to SOX Compliant Entities or wholly-owned subsidiaries of SOX Compliant Entities. Regardless of the disclaimer, in order to comply with the second sentence in Section 4D, the Audit committee of any entity that controls an insurer (a SOX Compliant entity or a non-SOX Compliant Entity) may be deemed to be the insurer’s Audit committee at the election of the controlling person, and only if such election is completed in the manner outlined in Section 14E.

The responsibility of the Audit committee is defined in Section 14 of the Model. Section 14 states that each member of the Audit committee shall be a member of the Board of Directors and sets forth the requirements for the proportion of independent Audit committee members based on the insurer’s direct written and assumed premiums. The definition of an independent Audit committee member is outlined in Section 14.

Qualifications of Independent Certified Public Accountant (Section 7)

Lead Audit Partner Rotation Requirement (Section 7D)

Purpose

The purpose of this section is to provide companies and their independent accountants with guidance to enable an orderly transition in meeting the revised lead audit partner rotation requirements as set forth in Section 7.

Background

Section 7 provides certain limitations on the number of years an audit partner may serve in the capacity of lead audit partner for an insurance company audit. Previously, the lead audit partner was permitted to serve for seven consecutive years in that capacity with a two year break in service. Under the revised Model “...the lead ...audit partner (having primary responsibility for the audit) may not act in that capacity for more than five (5) consecutive years. The person shall be disqualified from acting in that or a similar capacity for the same company or its insurance subsidiaries or affiliates for a period of five (5) consecutive years.”

The new rotation requirements under Section 7 are effective beginning with audits of the 2010 financial statements. The rotation requirements of the Model and the interpretative guidance provided are applicable for statutory reporting and regulatory purposes. An insurer and its affiliates that are subject to the rotation requirements of the Securities and Exchange Commission (SEC) and Public Company Accounting Oversight Board (PCAOB) must also continue to comply with those rotation requirements.

Relief from the Lead Audit Partner Rotation Requirement (Section 7D)

The Model states:

An insurer may make application to the Commissioner for relief from the above rotation requirement on the basis of unusual circumstances. This application should be made at least thirty (30) days before the end of the calendar year. The Commissioner may consider the following factors in determining if the relief should be granted:

- (a) Number of partners, expertise of the partners or the number of insurance clients in the currently registered firm;
- (b) Premium volume of the insurer; or
- (c) Number of jurisdictions in which the insurer transacts business.

The following examples illustrate circumstances that the Commissioner may consider in determining if relief from the lead partner rotation requirement shall be granted:

1. No other partners in the firm's local office have the qualifications to serve as lead audit partner and the use of a qualified partner resident in another location could result in increased audit risk and higher audit fees.
2. Limited number of partners in the firm that have the qualifications to serve as the lead audit partner.
3. Switching firms could result in increased audit risk due to the new engagement team's lack of familiarity with the insurer.
4. Limited availability of other firms in a particular location with the requisite expertise.
5. The regulator believes that complex issues at an insurer make a particular partner best suited to continue as lead audit partner.
6. Short-term relief due to the occurrence of an unforeseeable event that renders a partner unable to continue as the lead audit partner on the engagement.
7. Short-term relief due to unexpected delays in the state's licensing or admission process that prevent the "new" lead audit partner from assuming that role.

Also, the granting of transitional relief may be warranted when the non-insurance parent or ultimate parent of an insurance company is an SEC registrant and the current lead audit partner on the SEC registrant has completed his or her rotation as the lead audit partner on insurance subsidiaries prior to completing his or her five-year rotation as the lead partner on the audit of the GAAP financial statements of the SEC registrant. In this situation the relief would allow the lead audit partner to complete his or her rotation on the SEC registrant as long as he or she no longer acts in the capacity of lead audit partner for any insurance subsidiaries and/or any downstream affiliates of the insurance subsidiaries.

Frequently Asked Questions (Section 7D)

Following are a series of frequently asked questions to assist companies and their independent accountants in interpreting this guidance. Dates provided refer to the year of financial statements under audit.

In determining when the lead audit partner must rotate, consecutive time served in the capacity of lead audit partner prior to the effective date of these rules would be counted (i.e., the lead audit partner is not

afforded a “fresh start”). If the lead audit partner completed the two year break in service required by the previous version of the Model prior to the effective date of these rules, the partner is eligible to resume service as a lead audit partner for a five year period and need not wait additional years to accomplish a five year break in service.

1. 2010 would be the fifth year that a partner would serve as lead audit partner of an insurance company. Would that partner be able to complete the 2010 year-end audit?

Yes. The partner would be able to complete the 2010 year-end audit; however, the partner would be required to rotate off the engagement after the 2010 year-end audit.

2. 2010 would be the sixth or seventh year that a partner would serve as the lead audit partner. Would that partner be able to serve in that capacity for the 2010 audit?

No. The partner would be required to rotate off for the 2010 year-end audit. In determining when the lead audit partner must rotate, consecutive time served in the capacity of lead audit partner since the most recent two year break in service prior to the effective date of these rules would be counted.

3. If a partner serves as the concurring partner from 2007 – 2010, can that partner serve as the lead audit partner in 2011? If so, for how many years?

Yes. The Model does not prohibit a partner that has served as the concurring partner from subsequently serving as the lead audit partner. The time served as concurring partner does not count towards the five year limitation. In the situation above, the partner would be permitted to serve as lead audit partner from the 2011 year-end audit through the 2015 year-end audit.

4. Can a lead audit partner serve as the concurring review partner during the required five year break in service?

Yes. The Model specifies that a partner may not act in “that or a similar capacity for the same company or its insurance subsidiaries or affiliates for a period of five (5) consecutive years” where “that” refers to the role of lead audit partner. Therefore, the Model does not prohibit that partner from serving as concurring partner during that partner’s five year break in service.

5. During the five-year break in service, can a partner serve as lead audit partner on an insurance company affiliate of that company?

No. The Model specifies a “person shall be disqualified from acting in that or a similar capacity for the same company or its insurance subsidiaries or affiliates for a period of five (5) consecutive years.” The phrase “insurance subsidiaries or affiliates” is interpreted to mean any subsidiaries and affiliates (whether insurance or non-insurance).

6. If a lead audit partner serves for six years prior to the effective date of the revised Model (year-end audits from 2003 – 2008) then rotates off the engagement for two years (year-end audits 2009 – 2010), can that partner serve for five additional consecutive years (year-end audits from 2011 – 2015) as the lead audit partner?

No. The requirement for a break in service of five consecutive years becomes effective for the 2010 year-end audits. If the partner has not completed the two-year break in service prior to the effective date of the new requirement, the partner becomes subject to the new requirement and must complete a five-year break in service. However, if the lead audit partner completes the two year break in service by 2009 instead of 2010, that partner would be permitted to resume the lead audit partner role in 2010.

7. A partner that served seven years as lead audit partner has not worked on the engagement for two years. Assuming 2010 otherwise would be year three of the break in service, can that partner assume the lead audit partner role for the 2010 year-end audit?

Yes. The requirement for the five year break in service starts with engagement years beginning 2010. Prior to 2010, the rotation requirement is for a two year break in service.

8. If a lead audit partner served in that capacity for years 2007 – 2009 and was not on the engagement (or that of any subsidiary or affiliate) for 2010, would that partner have to complete a five year break in service before again serving as the lead audit partner?

No. However, the partner could only serve as the lead audit partner for two more years since the partner has already served three years on this engagement.

9. Can a former lead audit partner currently in a break in service continue to serve the client in a role other than the lead audit partner, for example concurring partner or auxiliary partner, such as tax review partner or other assisting role?

Yes. The Model auditor rotation rules apply only to the role of lead audit partner on the audit of the insurance company and its insurance subsidiaries or affiliates.

10. 2010 is the first year that a partner serves as the lead audit partner on an insurer. The partner serves as the lead audit partner on that insurer for year-end audits of 2010 – 2012; however, during 2013 – 2015 that partner does not serve as the lead audit partner on that insurer or any of its affiliates. If that partner again serves the insurer (or any of its insurance subsidiaries or affiliates) as the lead audit partner for 2016 year-end audit, when must that partner rotate off the engagement?

The partner is permitted to serve as the lead audit partner for the 2016 and 2017 year-end audits and must begin a five-year break in service with the year-end 2018 audit. The break in service during 2013 – 2015 would be for less than the five-year period required by the Model. In order for the partner to be permitted to begin a new five-year service period as lead audit partner on the insurer or any of its insurance subsidiaries or affiliates, a full five-year break in service is required to be completed by that partner.

11. How is service as the lead audit partner on the audit of the GAAP-basis financial statements of a separate account evaluated under the Model?

A separate account is not a legal entity, but an accounting entity with accounting records for variable contract assets, liabilities, income, and expenses segregated as a discrete operation within the insurance company. Therefore, the separate account is considered to be an insurance affiliate for purposes of applying the Model.

If the insurer is a part of a mutual fund complex, the mutual funds are considered to be non-insurance affiliates even if held as investments in the insurer's separate accounts.

12. An insurer changes to a new independent accounting firm. At the same time, the lead audit partner for that insurer joins the new independent accounting firm. Would the lead audit partner's time at the previous accounting firm count toward the five year rule at the new accounting firm?

Yes. The rule specifically applies to the lead audit partner and not the independent accounting firm.

13. Some firms have individuals that are CPAs but not partners (i.e., nonequity participants such as directors or principals) that serve in the role of the lead audit partner. Can such a CPA serve in the role of the lead audit partner of an insurance company?

Yes. The Model defines the lead audit partner as the individual having “primary responsibility for the audit.” Whether this capacity is served by a partner or other CPA with the equivalent qualifications is at the discretion of the independent accounting firm. As such, the individual would be subject to the rotation requirements of the lead audit partner under Section 7.

Questions 14 through 23 are based on the following hypothetical fact pattern and assume there are no public registrants in the group.

Neither insurance subsidiary A nor insurance subsidiary B has any investment in non-insurance subsidiary C.

- Partner Smith served as the lead audit partner on non-insurance holding company H for six years through the 2010 year-end audit.
 - Partner Jones served as the lead audit partner on insurance subsidiary A for four years through the 2010 year-end audit.
 - Partner Little served as the lead audit partner on insurance subsidiary B for three years through the 2010 year-end audit.
 - Partner Brown served as the lead audit partner on non-insurance subsidiary C for two years through the 2010 year-end audit.
 - Partner Miller served as the lead audit partner on insurance subsidiary D for three years through the 2010 year-end audit.
 - Partner King served as the lead audit partner on non-insurance subsidiary E for seven years through the 2010 year-end audit.
14. Can Partner Smith rotate from serving as the lead audit partner on non-insurance holding company H to serving as the lead audit partner on insurance subsidiary B for the 2011 year-end audit?

Yes. The limitation under Section 7 initiates with service as the lead audit partner of an *insurer*. Assuming Partner Smith has not previously served as the lead audit partner on an insurer, he or she can then serve as the lead audit partner on insurance subsidiary B or any of its affiliates for up to five years.

15. Can Partner King rotate from serving as the lead audit partner on non-insurance subsidiary E to serving as the lead audit partner on insurance subsidiary B for the 2011 year-end audit?

Yes. The limitation initiates with service as the lead audit partner of an *insurer*. Assuming Partner King has not previously served as the lead audit partner on an insurer, he or she can then serve as the lead audit partner on insurance subsidiary B or any of its affiliates for up to five years.

16. Can Partner Brown rotate from serving as the lead audit partner on non-insurance subsidiary C to serving as lead audit partner on insurance subsidiary B for the 2011 year-end audit?

Yes. The limitation initiates with service as the lead audit partner of an *insurer*. Assuming Partner Brown has not previously served as the lead audit partner on an insurer, he or she can then serve as the lead audit partner on insurance subsidiary B or any of its affiliates for up to five years. Therefore, Brown could serve insurance subsidiary B for five years beginning with the 2011 year-end audit.

17. Can Partner Brown rotate from serving as the lead audit partner on non-insurance subsidiary C to serving as lead audit partner on Holding Company H for the 2011 year-end audit?

Yes. C is a non-insurance subsidiary and H is a non-insurance holding company; therefore, assuming Partner Brown has not previously served as the lead audit partner on an insurer, the partner rotation requirements of Section 7 are not applicable relative to non-insurance subsidiary C and non-insurance holding company H.

18. Can Partner Jones rotate from serving as the lead audit partner on insurance subsidiary A to serving as the lead audit partner for insurance subsidiary B for the 2011 year-end audit?

Yes. However, Jones can only serve for one year due to four years prior service as the lead audit partner on insurance subsidiary A (an insurance affiliate).

19. Can Partner Jones rotate from serving as the lead audit partner on insurance subsidiary A to serving as the lead audit partner on non-insurance subsidiary C for the 2011 year-end audit?

Yes. However, Jones can only serve for one year due to four years prior service as the lead audit partner on insurance subsidiary A (an insurance affiliate). The limitation initiates with serving as the lead audit partner on an insurer.

20. Can Partner King rotate from serving as the lead audit partner on non-insurance subsidiary E to serving as the lead audit partner on non-insurance subsidiary C for the 2011 year-end audit?

Yes. E is a non-insurance subsidiary and C is a non-insurance subsidiary; therefore, assuming Partner King has not previously served as the lead audit partner on an insurer, the partner rotation requirements of Section 7 are not applicable relative to non-insurance subsidiary E and non-insurance subsidiary C.

21. Can Partner Jones rotate from serving as the lead audit partner on insurance subsidiary A to serving as the lead audit partner on non-insurance subsidiary E for the 2011 year-end audit?

Yes. However, Jones can only serve for one year due to four years prior service as the lead audit partner on insurance subsidiary A (an insurance affiliate). The limitation initiates with serving as the lead audit partner on an insurer.

22. Can Partner Jones rotate from serving as the lead audit partner on insurance subsidiary A to serving as the lead audit partner on insurance subsidiary D for the 2011 year-end audit?

Yes. However, Jones can only serve for one year due to four years prior service as the lead audit partner on insurance subsidiary A (an insurance affiliate). The limitation initiates with serving as the lead audit partner on an insurer.

23. Can Partner Little rotate from serving as the lead audit partner on insurance subsidiary B to serving as the lead audit partner on non-insurance subsidiary E for the 2011 year-end audit?

Yes. However, Little can only serve for two years due to three years prior service as the lead audit partner on insurance subsidiary B (an insurance affiliate). The limitation initiates with serving as the lead audit partner on an insurer.

Prohibited Services (Section 7 G)

The Model does not allow the Commissioner to accept an Audited financial report prepared by an accountant who provides the insurer, contemporaneously with the audit, non-audit services as outlined within the Model. One of the prohibited services outlined in the Model consists of bookkeeping or other services related to the accounting records or financial statements of the insurer. The prohibition in this area should include, but is not limited to, services related to the preparation of the Annual Statement to be submitted by the insurer. However, the drafting of the Audited financial report would not be prohibited, provided that the accountant does not assume decision-making authority (e.g., approval of journal entries) in compiling the draft report.

Communication of Internal Control Related Matters Noted in an Audit (Section 11)

In addition to the annual Audited financial report, each insurer must furnish the Commissioner with a written communication as to any unremediated material weakness in its internal control over financial reporting noted during the audit. The communication is prepared by the accountant within 60 days after the filing of the annual Audited financial report and is filed by the insurer. Recognizing it may not always be practical, insurers are encouraged to file the communication concurrently with the filing of the annual Audited financial report for those years in which the insurer is aware that a financial condition examination has been scheduled. The insurer is required to provide a description of remedial actions taken or proposed to correct unremediated material weaknesses, if the actions are not described in the accountant's communication.

The Model requires that the Commissioner be notified when unremediated material weaknesses in internal control over financial reporting were noted during the audit. Previous versions of the Model required such communication when any significant deficiencies in internal control over financial reporting were noted during the audit, whether remediated or not. This distinction is important because of the level of severity of the internal control deficiency that is applicable to each term. The terms "material weakness" and "significant deficiency" have the same meaning respectively as used in PCAOB or American Institute of Certified Public Accountants (AICPA) auditing literature - PCAOB Auditing Standard No. 5, An Audit of Internal Control over Financial Reporting That is Integrated With an Audit of Financial Statements or AICPA AU Section 325, Communicating Internal Control Matters Identified in an Audit (see Section 17E of this Guide for the definitions of material weakness and significant deficiency that are included in the auditing literature). However, the insurer is expected to maintain information about significant deficiencies that were communicated by its auditors and such information should be available for review during the financial condition examination.

The following is an example of the type of communication that an insurer should prepare to communicate the remedial actions taken or proposed to correct a material weakness in its internal control over financial reporting noted during an audit.

Communication of Internal Control Related Matter Noted in an Audit - Sample

Honorable Commissioner
State of Domicile Insurance Department
State of Domicile

Dear Honorable Commissioner:

During the audit completed for the year ended December 31, 20XX, for XYZ Holding Company Inc ("XYZ"), a material weakness was noted in XYZ's internal control over financial reporting related to the calculation of insurance reserves. Due to the manner in which the data for homeowners policies are captured by the systems used in its Southeastern US regional office, changes in XYZ's estimate of

insurance reserves for certain policies are not reviewed by XYZ's Actuarial Department prior to being recorded in the company's accounting records.

A material weakness is a deficiency or a combination of deficiencies in internal control, such that there is a reasonable possibility that a material misstatement of the entity's financial statements will not be prevented, or detected and corrected on a timely basis. In connection with the weakness noted above, XYZ's management has taken remedial actions to change its procedures for coding policies issued in the states affected so that all homeowners' policy data are included in the Actuarial Department review of estimate of insurance reserves. This change was effective on July 1, 20XX.

Should you have any questions regarding this matter, please do not hesitate to contact me at the number noted above.

Regards,

XYZ Holding Company, Inc.

Requirements for Audit Committees (Section 14)

A disclaimer within Section 14 of the Model indicates that the section shall not apply to SOX Compliant Entities or wholly-owned subsidiaries of SOX Compliant Entities. This disclaimer was placed within the Model to avoid conflicts between the independence requirements of the Model and those required of public companies under Section 301 of the Sarbanes Oxley Act of 2002. The expectation of regulators in developing this disclaimer was that the same independent Audit committee required of public companies under Section 301 would be deemed to be the insurer's Audit committee for purposes of this regulation (pursuant to Section 4D of the Model) or would participate in the oversight of the insurers within the group. Therefore, if material weaknesses, significant deficiencies and/or significant solvency concerns are identified at the legal entity level, the independent Audit committee should be involved in addressing these issues, regardless of their materiality at the consolidated, parent company level.

Independence of an Audit Committee Member (Section 14C)

A policyholder would be considered "independent" unless they receive direct compensation from the insurer for other unrelated services.

A person who is otherwise considered independent and also serves on the Board of Directors of a contracting entity (e.g., medical provider, vendors, banks, etc.) is considered independent.

An otherwise non-independent member of the Board of Directors is considered independent for Audit committee purposes if state law requires participation on the Board (e.g., Medical providers) as long as the member is not an officer or employee of the insurer or one of its affiliates.

Notification letter (Section 14E)

In accordance with Section 14E, upon the initial election by the insurer to designate the Audit committee of an entity that controls the insurer as its Audit committee, the insurer shall provide written notification to the Commissioner of the affected insurer. This notification shall identify the controlling entity and the basis for the election. This election remains in effect for perpetuity, until rescinded, at which time written notification would need to be provided to the Commissioner of the insurer. The notification letter should be timely filed with the Commissioner by the ultimate controlling person prior to the issuance of the statutory Audited financial report. However, each of the affected insurers (i.e. those that will have an Audit committee designated by its ultimate controlling person) that is subject to the provisions of Section 14 shall ensure that the notification letter is filed with the Commissioner. Absence such filing, each of the

affected insurers would be individually responsible for complying with Section 14. For example, referring to the “Group of insurers” chart in Section 3, if the ABC Company is the ultimate controlling person and elects to have its Audit committee serve as the Audit committee for insurance company 5, then ABC Company would file the notification letter (insurance company 5 would have to ensure that the notification letter is filed or comply with Section 14 as a single entity). Once submitted, the election remains in effect until rescinded. The following example illustrates the reporting requirement.

The XYZ insurance company (e.g., insurance company 5) is an indirect subsidiary of and controlled by ABC Company. ABC Company has an independent Audit committee comprised of directors of ABC Company. XYZ insurance Company has elected to designate the Audit committee of ABC Company as the Audit committee of XYZ insurance Company for purposes of complying with Audit committee requirements of the Annual Financial Reporting Model Regulation.

(Signed) _____ (Date) _____
 (XYZ Insurance Company Chief Executive Officer)

(Signed) _____ (Date) _____
 (ABC Company Chief Executive Officer)

Transitional Guidance (Section 14G)

Once a company exceeds the requisite thresholds for Audit committee requirements contained in Section 14 of the Model, it is required to comply with the Audit committee requirements by January 1 following one (1) complete calendar year. The following are examples of transitional period requirements.

A: Company surpasses \$300 million threshold:

ABC Insurance Company has reached the \$300 million requisite threshold in its December 31, 2011 audited statutory statement and therefore will be required to meet “majority (50% or more) member independence” Audit committee requirements by January 1, 2013, providing the company necessary time for recruitment and approvals.

B: Company surpasses \$500 million threshold:

ABC Insurance Company has subsequently reached the \$500 million requisite threshold in its December 31, 2014 audited statutory statement and therefore will be required to meet the “Supermajority (75% or more) member independence” Audit committee requirements by January 1, 2016.

C: Company drops below threshold amount:

If ABC Insurance Company has penetrated the requisite \$500 million threshold and has been in compliance with the requirements but subsequently drops below the \$500 million threshold, e.g., \$450 million in its December 31, 2018 audited statutory statements, the company would be subject to the “majority (50% or more) member independence” requirement and could reduce the Audit committee independence in 2019. Companies, however, are encouraged to structure their Audit committees with at least a supermajority of independent Audit committee members.

Hardship Waiver (Section 14H)

An insurer may make application to the Commissioner for a waiver from the Section 14 requirements based upon hardship. Examples may include, but are not limited to, requests based on the business type of the entity, the availability of qualified board members, or the ownership (e.g., entities owned by non-profit health systems) or organizational structure of the entity. If the application for a waiver is approved, the insurer would file, with its annual statement filing, the approval for relief from Section 14 with the

states that it is licensed in or doing business in and the NAIC. If the nondomestic state accepts electronic filing with the NAIC, the insurer would file the approval in an electronic format acceptable to the NAIC.

Management's Report of Internal Control over Financial Reporting (Section 17)

Premium Threshold (Section 17A)

The term "direct written premium" is frequently associated with the property/casualty business. While the Model continues to use the term, it raises the question for other businesses, e.g., life and fraternal, what is the appropriate measure for assessing compliance? The following examples have been developed to illustrate the computation since the starting point is the audited financial statements of the reporting entity, and it is possible that the amount reported may not be consistent with written premium as reported in the regulatory reporting blank.

The annual direct written and assumed premium:

- ◆ will be derived from the annual Audited financial report of an individual insurer, as of December 31 immediately preceding
- ◆ are generally reported in the Statement of Operations of the Audited Financial Report on an 'earned' and a 'net of reinsurance ceded' basis
- ◆ will be computed by making the following adjustments:

P/C, Health and Title entities:

	\$
Premiums earned (Statement of Income in Audited financial report)	A
Add/Deduct: Change in unearned premium	B
Add: Reinsurance ceded	C
Direct written and assumed premium *	D=A+B+C

*Note: Direct written and assumed premium would be reduced by any premiums reinsured with the Federal Crop Insurance Corporation and Federal Flood Program

- A - Premiums earned per the Statement of Income will generally equal the Annual Statement, Page 4.
- B - Change in unearned premium is the difference between the current period amount and the prior year-end amount reported in the liabilities section of the balance sheet. The amount may also be derived from other company prepared exhibits.
- C - Reinsurance ceded may be derived from the notes to the Audited financial report, if disclosed, or other company prepared exhibits or schedules. If the Statement of Income or Statement of Operations separately presents reinsurance ceded, an adjustment is not required.
- D - Must be equal to, or greater than, \$500 million in order to be subject to Section 17 reporting.

Life and Fraternal entities:

	\$
Premiums earned (Statement of Operations in Audited financial report)	A
Add: Reinsurance ceded	B
Direct written and assumed premium	C=A+B

- A - Premiums earned per the Statement of Operations will generally equal the Annual Statement, Page 4.
- B - Reinsurance ceded may be derived from the notes to the Audited financial report, if disclosed, or other company prepared exhibits or schedules. If the Statement of Operations separately presents reinsurance ceded, an adjustment is not required.
- C - Must be equal to, or greater than, \$500 million in order to be subject to Section 17 reporting.

Companies in an RBC Level Event or in Hazardous Financial Condition (Section 17B)

For purposes of this subsection, the phrase “RBC level event” refers to any of the regulatory action levels described in the Risk-Based Capital requirements or the trend test. For example, if the reporting entity’s total adjusted capital is equal to or less than 200% of the required risk-based capital, the result would trigger regulatory action.

Management’s Report of Internal Control over Financial Reporting (Sections 17C & 17D)

Management must annually provide their domiciliary insurance department with a report on internal controls over the statutory financial statement process. Recognizing it may not always be practical, insurers are encouraged to file the report concurrently with the filing of the annual Audited financial report for those years in which the insurer is aware that a financial condition examination has been scheduled. The elements to be included in the report are outlined in 17D.

As outlined in Section 17C, an addendum is required for all reports that rely on a Section 404 Report (Sarbanes-Oxley). The Model states that the Section 404 Report means management’s report on internal control over financial reporting as defined by the SEC and the related attestation report of the independent certified public accountant. However, in 2010, the Dodd-Frank Act exempted non-accelerated SEC filers (those reporting companies that do not meet the definition of either an “accelerated filer” or a “large accelerated filer” under Exchange Act Rule 12b-2.) from the requirement to obtain the related attestation report of the independent certified public accountant. As such, non-accelerated SEC filers may file a Section 404 Report that does not include an attestation report of the independent certified public accountant, along with the appropriate addendum, to fulfill requirements in this area.

Alternately, insurers may utilize a report received as a result of work performed in accordance with Statement of Standards in Attestation Engagements (SSAE) No. 15 in a similar fashion to a Section 404 Report. As such, there are two main types of reports that can be provided:

- Reports from entities that have complied with all required elements of Section 404 of the Sarbanes-Oxley Act (or have received an SSAE No. 15 report) either as a requirement or on a voluntary basis.
- Reports from entities that have not complied with Section 404 of the Sarbanes-Oxley Act (or have not received an SSAE No. 15 report).

Appendix 1 of this guide provides examples of Management’s Report of Internal Controls over Financial Reporting utilizing various facts and circumstances.

Section 17D(2): Management must make an assertion regarding the effectiveness of the insurer’s Internal control over financial reporting to the best of its knowledge and belief after diligent inquiry. For purposes of filing the report, “diligent inquiry” means conducting a search and thorough review of relevant documents which are reasonably likely to contain significant information with regards to Internal control over financial reporting and making reasonable inquiries of current employees and agents whose duties include responsibility for Internal control over financial reporting.

Section 17D(5): The report must disclose any unremediated material weaknesses in Internal control over financial reporting that exist as of the balance sheet date. If the insurer or Group of insurers has identified an unremediated material weakness, management is not permitted to conclude that its Internal control over financial reporting is effective and it must include a description of the nature of any unremediated material weakness in the report. December 31 is used as the measurement date to whether a material control weakness is unremediated for purposes of reporting under this section of the Model.

Section 17D(6): Users of the report should be aware of the inherent limitations in Internal control over financial reporting. PCAOB Auditing Standard No. 5, An Audit of Internal Control over Financial Reporting That is Integrated With an Audit of Financial Statements provides the following description of such inherent limitations:

Internal control over financial reporting has inherent limitations. Internal control over financial reporting is a process that involves human diligence and compliance and is subject to lapses in judgment and breakdowns resulting from human failures. Internal control over financial reporting also can be circumvented by collusion or improper management override. Because of such limitations, there is a risk that material misstatements will not be prevented or detected on a timely basis by internal control over financial reporting. However, these inherent limitations are known features of the financial reporting process. Therefore, it is possible to design into the process safeguards to reduce, though not eliminate, this risk.

Additionally, readers of the report should be aware that projecting management's assertion regarding the effectiveness of Internal control over financial reporting to future periods is subject to the risk that controls may become inadequate because of changes in conditions, or the degree of compliance with policies or procedures may deteriorate.

Section 17D(7): The report must include signatures of the chief executive officer and chief financial officer (or the equivalent position/title). If a report is being filed on behalf of a Group of insurers, management should identify the officeholders (i.e., the CEO and CFO of Company ABC) that have the authority to sign the report on behalf of the all of the legal entities being reported upon within the Group of insurers.

Basis for Management's Review and Assertions (Section 17E)

One of the primary reasons for the new Section 17 of the Model is to bring additional focus and attention to internal control over financial reporting. Financial reporting is the underpinning of many of the solvency oversight activities of insurance regulators. Section 17 of the Model identifies management's responsibilities for internal control over financial reporting and provides regulators additional assurances of the effectiveness of internal control practices in a cost effective manner.

The basis for Management's Report of Internal Control over Financial Reporting shall be subject to insurance departments' financial condition examinations. Because of this and other solvency tools available to regulators, there is no requirement that the independent certified public accountant be engaged to perform an examination of the effectiveness of internal control over financial reporting. However, Section 9 requires the independent public accountant to consider (as that term is defined in AICPA Statement on Auditing Standards (SAS) No. 102, Defining Professional Requirements in Statements on Auditing Standards, or its replacement) the most recently available Management's Report of Internal Control over Financial Reporting in planning and performing the audit of the statutory financial statements. SAS No. 102, paragraph 4 states, "If a SAS provides that a procedure or action is one that the auditor "should consider," the consideration of the procedure or action is presumptively required, whereas carrying out the procedure or action is not." AU Section 319 of the Professional Standards of the AICPA, Consideration of Internal Control in a Financial Statement Audit, requires that the auditor obtain an understanding of internal control sufficient to plan and execute the audit. It is in this

context that the auditor is required to "consider" management's report. There is no requirement that the auditor test or otherwise use management's report.

The Model does not mandate a specific framework for management's review and evaluation of internal controls. SEC registrants typically (but are not required to) use the COSO Internal Control-Integrated Framework in assessing the effectiveness of internal control over financial reporting. The COSO-sponsored "Enterprise Risk Management-Integrated Framework" and the PCAOB Guidance for Smaller Public Companies Reporting on Internal Control over Financial Reporting are other examples of relevant literature companies may want to consider in applying such a framework. Under the Model, however, management, when making its assessment and preparing its report, has discretion as to the nature of the internal control framework used. Insurers shall have flexibility as to the frequency and scope of testing activities and the documentation provided upon examination to support the assertions. Management should assess and select an appropriate framework or approach based upon its business risks and objectives.

Management's assertions about the effectiveness of internal controls enhance oversight and understanding of insurer solvency by allowing regulators to have greater confidence in the accuracy of financial reporting, which also provides a benefit to policyholders and creditors. An expected benefit of this enhancement, where internal controls are effective, is that financial examinations will become more efficient and risk-focused.

Management's Report of Internal Control over Financial Reporting may span more than one legal entity. Because internal controls are primarily about processes and these processes are often applied across multiple legal entities within an organization, (e.g., investment systems, premium and loss/benefit systems, and financial reporting processes), management may consider common processes and the associated controls when determining the Group of insurers for reporting purposes.

The Model provides flexibility in meeting the requirements of Section 17D and E. The controls included in the scope of management's report should only include those controls deemed significant or critical by management. The following examples represent aspects and components of internal control that insurers may want to consider when making the assertions and determining relevant documentary evidence. These are not intended to serve as, and should not be considered, requirements:

- The internal control environment including oversight provided by the Audit committee of the Board of Directors. Insurers may want to consider how they can demonstrate "Tone at the Top." The insurer's compliance programs, code of conduct and the processes for reporting policy exceptions and overrides of controls may also be appropriate to consider.
- The risk assessment process utilized and identification of the areas of potential material internal control risk related to the financial statement. Risk areas that one might typically find for an insurance enterprise include:
 - Investments (including capital expenditures)
 - Policy and Claim Reserves
 - Benefit Payments
 - Premiums / Agent's Balances
 - Reinsurance
 - Related Party (Affiliate) Transactions
 - Operating Expenses/Taxes
- The control activities in place including procedures over financial reporting, which in management's judgment are appropriate under the circumstances. These might include the daily or monthly controls management relies upon in the normal course of its activities. They would also

include any SAS 70 reports received from vendors upon which management relies. General information systems and technology controls might also be considered.

- The monitoring and testing processes used in the normal course of business to ascertain that the internal controls are in place and are working as intended. Insurers may want to consider describing the purpose, function or role of an internal audit department and/or describe other self-audit and analysis activities.
- The information and communication processes, including the frequency of reporting and monitoring activities and communication of internal control responsibilities.

Section 17D(5) of the Model indicates that if one or more unremediated material weaknesses in Internal Control over financial reporting exists as of the balance sheet date, then management is not permitted to conclude that internal control over financial reporting is effective and it must include a description of the nature of any unremediated material weaknesses in the report. For purposes of this determination, material weakness has the same meaning as used in PCAOB or AICPA auditing literature – PCAOB Auditing Standard No. 5, An Audit of Internal Control over Financial Reporting That is Integrated With an Audit of Financial Statements or AICPA AU Section 325, Communicating Internal Control Related Matters Identified in an Audit. Such guidance provides the following definitions:

Significant Deficiency – A significant deficiency is a deficiency, or a combination of deficiencies, in internal control that is less severe than a material weakness, yet important enough to merit attention by those charged with governance.

Material Weakness – A material weakness is a deficiency, or combination of deficiencies, in internal control, such that there is a reasonable possibility that a material misstatement of the entity's financial statements will not be prevented, or detected and corrected on a timely basis.

Insurers filing Management's Report of Internal Control over Financial Reporting as a Group of insurers may want to also consider identifying or documenting common systems and controls used by multiple companies within an insurance holding company system and how such information was used in the development of the Group of insurers for reporting purposes.

To allow insurers to comply with Section 17 in a cost effective manner, management may base its assertions, in part, upon its review, monitoring and testing processes performed in the normal course of its activities. Management may also consider diligent inquiry of key process owners throughout the organization to provide additional assurance as to the operating effectiveness of its internal control over financial reporting. For purposes of filing the report, "diligent inquiry" means conducting a search and thorough review of relevant documents which are reasonably likely to contain significant information with regards to internal control over financial reporting and making reasonable inquiries of current employees and agents whose duties include responsibility for Internal control over financial reporting.

Exemptions and Effective Dates (Section 18)

Hardship Waivers (Section 18A)

Notwithstanding any other provision of the Model, an insurer may make written application to the Commissioner for waiver from any or all provisions of the Model based upon financial or organizational hardship. For example, the Commissioner could under this section grant a waiver of the Section 14B audit committee independence requirements to a company exceeding the \$500 million premium threshold, even though the Section 14H waiver would not apply. This exemption is granted at the discretion of the Commissioner, and may be granted at any time for a specified period or periods.

Specific Effective Dates (Section 18F)

An insurer will be required to file a Section 17 report if the insurer exceeds the premium threshold (as defined in Section 17A.)

1. Assume the insurer reports premiums as follows (note that the direct written and assumed premium in these examples would be reduced by any premiums reinsured with the Federal Crop Insurance Corporation and Federal Flood Program) :

\$ millions	201x	201x+1	201x+2	201x+3	201x+4
Net (written) premiums, per Statement of Operations in Audited financial report	350.3	390.8	410.5	425.7	450.8
Add: Reinsurance ceded	100.5	115.7	115.8	120.1	127.2
Gross direct written and assumed premium	450.8	506.5	526.3	545.8	578.0

In the above example, the insurer has reached the requisite threshold in 201x+1 and therefore will file its first Section 17 report effective December 31, 201x+3.

2. Assume the insurer reports premiums as follows:

\$ millions	201x	201x+1	201x+2	201x+3	201x+4
Net (written) premiums, per Statement of Operations in Audited financial report	350.3	380.5	390.8	410.5	425.7
Add: Reinsurance ceded	100.5	110.7	115.7	115.8	120.1
Gross direct written and assumed premium	450.8	491.2	506.5	526.3	545.8

In the above example, the insurer has reached the requisite threshold in 201x+2 and therefore will file its first Section 17 report effective December 31, 201x+4.

3. Assume the insurer reports premiums as follows:

\$ millions	201x	201x+1	201x+2	201x+3	201x+4
Net (written) premiums, per Statement of Operations in Audited financial report	350.3	390.8	380.5	410.5	425.7
Add: Reinsurance ceded	100.5	115.7	110.7	115.8	120.1
Gross direct written and assumed premium	450.8	506.5	491.2	526.3	545.8

In the above example, the insurer has reached the requisite threshold in 201x+1 and therefore will file its first Section 17 report effective December 31, 201x+3. Because the insurer dropped below the threshold in 201x+2, the insurer is not required to file a Section 17 report and thus, the reporting period starts over. The insurer reaches the threshold in 201x+3 and therefore, required to file the Section 17 report effective December 31, 201x+5. The insurer may choose to begin voluntarily filing the Section 17 report beginning with 201x+3 especially if the insurer has done the work to prepare the report.

Business Combination

A business combination is defined as acquisition of insurance/reinsurance business through:

- A. a stock acquisition,
- B. inforce reinsurance assumption, or
- C. a merger of insurers in a Group of insurers

A. Stock Acquisitions

Assume Company A, which has premiums of \$500m or more, buys Company B and retains Company B as a separate legal entity.

If Company B has premiums of less than \$500m (as derived from Section 17A), no Section 17 report is required.

If Company B has premiums of \$500m or more (as derived from Section 17A), a Section 17 report is required.

1. Assume Company B is acquired effective January 1, 201x and subsequently reports premiums as follows. Assume further that Company A and B elect to file separate Section 17 reports:

\$ millions	201x	201x+1	201x+2	201x+3	201x+4
Net (written) premiums, per Statement of Operations in Audited financial report	350.3	390.8	410.5	425.7	450.8
Add: Reinsurance ceded	100.5	115.7	115.8	120.1	127.2
Gross direct written and assumed premium	450.8	506.5	526.3	545.8	578.0

In the above example, Company B has reached the requisite threshold in 201x+1 and therefore will file its first Section 17 report effective December 31, 201x+3.

2. Assume Company B is acquired June 30, 201x+2 by Company A and Company B has premiums as follows. Assume further that Company A elects to file a single Section 17 report with the Group of insurers consisting of Company A and B:

\$ millions	201x	201x+1	201x+2	201x+3	201x+4
Net (written) premiums, per Statement of Operations in Audited financial report	350.3	390.8	410.5	425.7	450.8
Add: Reinsurance ceded	100.5	115.7	115.8	120.1	127.2
Gross direct written and assumed premium	450.8	506.5	526.3	545.8	578.0

In the above example, Company B has reached the requisite threshold in 201x+1 and therefore will file its first Section 17 report effective December 31, 201x+3. However due to the acquisition in 201x+2, the first combined Section 17 report, i.e., Group of insurers, would be effective December 31, 201x+4, two years subsequent to acquisition.

B. Inforce Reinsurance Assumption

For the purposes of determining premiums pursuant to Section 17A, assumed premiums from the assumption of an inforce reinsurance transaction will be excluded from the measurement of premiums, for two calendar years subsequent to acquisition.

Assume the insurer assumed an inforce transaction effective June 30, 201x+2 and reports premiums as follows:

\$ millions	201x	201x+1	201x+2	201x+3	201x+4
Net (written) premiums, per Statement of Operations in Audited financial report	350.3	390.8	610.5	850.7	875.8
Add: Reinsurance ceded	100.5	115.7	115.8	120.1	127.2
Gross direct written and assumed premium	450.8	506.5	726.3	970.8	1,003.0
Less: Gross assumed premium resulting from a business combination	0	0	200.0	425.0	425.0
Gross direct written and assumed premium, subject to Section 17	450.8	506.5	526.3	545.8	578.0

In the above example, the insurer has reached the requisite threshold in 201x+1 and therefore will file its first Section 17 report effective December 31, 201x+3, however only for business inforce in 201x+1 and still inforce in 201x+3. The business assumed at June 30, 201x+2 will be subject to a Section 17 report effective December 31, 201x+4, two calendar years after acquisition.

C. Mergers of Insurers in a Group of Insurers

If the merged insurer has premiums of less than \$500m (as derived from Section 17A), a Section 17 report is not required.

If the merged insurer has premiums of \$500m or more (as derived from Section 17A), a Section 17 report is required.

1. Assume that Insurer A and Insurer B have Gross direct written and assumed premiums as follows, and agree to merge effective January 1, 201x+1, with Insurer A as the surviving entity:

\$ millions	201x	201x+1	201x+2	201x+3	201x+4
Gross direct written and assumed premium – Insurer A	450.3	460.8	510.5	n/a	n/a
Gross direct written and assumed premium – Insurer B	100.5	115.7	115.8	n/a	n/a
Less: Intercompany transactions – gross	-	65.3	62.2	n/a	n/a
Combined gross direct written and assumed premiums Insurer A	-	511.2	564.1	n/a	n/a

In the above example, the merged entity (insurer A) has reached the requisite threshold in 201x+1, and will file its first Section 17 report effective December 31, 201x+3.

2. Assume that Insurer A and Insurer B have Gross direct written and assumed premiums as follows, and agree to merge effective January 1, 201x+2, with Insurer A as the surviving entity:

\$ millions	201x	201x+1	201x+2	201x+3	201x+4
Gross direct written and assumed premium – Insurer A	450.3	460.8	510.5	n/a	n/a
Gross direct written and assumed premium – Insurer B	100.5	115.7	115.8	n/a	n/a
Less: Intercompany transactions – gross	-	-	62.2	n/a	n/a
Combined gross direct written and assumed premiums Insurer A	-	-	564.1	n/a	n/a

In the above example, the merged entity (insurer A) has reached the requisite threshold in 201x+2, and will file its first Section 17 report effective December 31, 201x+4, two years subsequent to merger.

APPENDIX 1

Illustrative Examples of Management’s Report of Internal Control over Financial Reporting

The following are examples of Management’s Report of Internal Controls over Financial Reporting utilizing different facts and circumstances. These are only examples and individual company facts and circumstances will dictate the contents of their report. However, there are common elements that should be included in all reports as discussed in Sections 17C and 17D of the Model.

Example A: An SEC registrant or a member of a holding company system whose parent is an SEC registrant that had all material control processes over statutory financial reporting addressed in its Section 404 report Page 23

Example B: An SEC registrant or a member of a holding company system who is a SEC registrant and is a non-accelerated filer that had all material control processes over statutory financial reporting addressed in its Section 404 report. For these non-accelerated filers, the Section 404 report does not require the report of independent registered public accounting firm on internal control over financial reporting..... Page 25

Example C: An SEC registrant or a member of a holding company system whose parent is an SEC registrant that did not have all material control processes over statutory financial reporting addressed in its Section 404 report..... Page 27

Example D: An SEC registrant or a member of a holding company system who is a SEC registrant and is a non-accelerated filer that did not have all material control processes over statutory financial reporting addressed in its Section 404 report. For these non-accelerated filers, the Section 404 report does not require the report of independent registered public accounting firm on internal control over financial reporting..... Page 30

Example E: A non-SEC registrant or a member of a holding company system that voluntarily complied with Section 404 of the Sarbanes-Oxley Act and produced a report on internal controls which included an auditor’s opinion..... Page 33

Example F: A company [or “group of insurers”] that is not subject to Section 404 and utilized their own framework to evaluate controls..... Page 35

Example G: An SEC registrant or a member of a holding company system whose parent is an SEC registrant that had all material control processes addressed in their Section 404 report and had an unremediated material weakness..... Page 37

Example H: An SEC registrant or member of a holding company system whose parent is an SEC registrant that did not include all material processes over statutory financial reporting addressed in its Section 404 report and had an unremediated material weakness noted Page 39

Example I: An SEC registrant or member of a holding company system whose parent is an SEC registrant that had all material processes over statutory financial reporting addressed in its Section 404 report. However, they recently acquired another insurer that is not included in their assessment Page 42

EXAMPLE A: AN SEC REGISTRANT OR A MEMBER OF A HOLDING COMPANY SYSTEM WHOSE PARENT IS AN SEC REGISTRANT THAT HAD ALL MATERIAL CONTROL PROCESSES OVER STATUTORY FINANCIAL REPORTING ADDRESSED IN ITS SECTION 404 REPORT

Management’s Report of Internal Control over Financial Reporting

XYZ Holding Company Inc (“XYZ”) is required to file annual reports on Form 10-K/20-F with the U.S. Securities and Exchange Commission. Each of the insurance companies listed on Attachment B is a wholly owned subsidiary of XYZ. For the purpose of XYZ’s Management’s Report of Internal Control over Financial Reporting, management has identified its “Group of insurers,” as that term is defined in [relevant state statute or Section 3H of the Model], as the insurance companies listed on Attachment B.

Management of XYZ is responsible for establishing and maintaining adequate internal control over statutory financial reporting. XYZ’s internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements in accordance with statutory accounting principles. Management conducted an assessment of the effectiveness, as of December 31, 201X, of the Group of insurers’ internal control over statutory financial reporting, based on the framework established in *Internal Control—Integrated Framework Issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)*. Based on our assessment under that framework, management concluded that the Group of insurers’ internal control over statutory financial reporting is effective to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements as of December 31, 201X.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are also subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In satisfaction of the Group of insurers’ obligation to deliver Management’s Report of Internal Control over Financial Reporting for the fiscal year ended December 31, 201X, as permitted by [relevant state statute or Section 17C of the Model], XYZ is hereby providing the Insurance Commissioner of [domiciliary state] copies of Management’s Report of Internal Control over Financial Reporting and the report of independent registered public accounting firm on internal control over financial reporting for XYZ included in XYZ’s Form 10-K/20-F for the fiscal year ended December 31, 201X (or alternatively the Annual Report to Stockholders). In addition, an Addendum (Attachment A) is included to this report which identifies the material processes that were not included in the Section 404 Report (as defined in Attachment A).

Based on management review of internal controls, there were no unremediated material weaknesses as of December 31, 201X identified as part of the Group of insurers’ internal control structure over the statutory financial statements for the year ended December 31, 201X.

EXAMPLE B: AN SEC REGISTRANT OR A MEMBER OF A HOLDING COMPANY SYSTEM WHO IS A SEC REGISTRANT AND IS A NON-ACCELERATED FILER THAT HAD ALL MATERIAL CONTROL PROCESSES OVER STATUTORY REPORTING ADDRESSED IN ITS SECTION 404 REPORT. FOR THIS NON-ACCELERATED FILER, THE SECTION 404 REPORT DOES NOT REQUIRE THE REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM ON INTERNAL CONTROL OVER FINANCIAL REPORTING.

Management’s Report of Internal Control over Financial Reporting

XYZ Holding Company, Inc. (“XYZ”) is required to file annual reports on Form 10-K/20-F with the U.S. Securities and Exchange Commission. Each of the insurance companies listed on Attachment B is a wholly owned subsidiary of XYZ. For the purpose of XYZ’s Management’s Report of Internal Control over Financial Reporting, management has identified its “Group of insurers,” as that term is defined in [relevant state statute or Section 3H of the Model] as the insurance companies listed on Attachment B.

Management of XYZ is responsible for establishing and maintaining adequate internal control over statutory financial reporting. XYZ’s internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements in accordance with statutory accounting principles. Management conducted an assessment of the effectiveness, as of December 31, 201X, of the Group of insurers’ internal control over statutory financial reporting, based on the framework established in Internal Control—Integrated Framework Issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). Based on our assessment under that framework, management concluded that the Group of insurers’ internal control over statutory financial reporting is effective to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements as of December 31, 201X.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are also subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In satisfaction of the Group of insurers’ obligation to deliver Management’s Report of Internal Control over Financial Reporting for the fiscal year ended December 31, 201X, as permitted by [relevant state statute or Section 17 of the Model], XYZ is hereby providing the Insurance Commissioner of [domiciliary state] copies of Management’s Report of Internal Control over Financial Reporting included in XYZ’s Form 10-K/20-F for the fiscal year ended December 31, 201X (or alternatively the Annual Report to Stockholders). This does not include a report of independent registered public accounting firm on internal control over financial reporting for XYZ, as it is not required for non-accelerated filers. In addition, an Addendum (Attachment A) is included to this report which identifies the material processes that were not included in the Section 404 Report (as defined in Attachment A).

Based on management review of internal controls, there were no unremediated material weaknesses as of December 31, 201X identified as part of the Group of insurers’ internal control structure over the statutory financial statements for the year ended December 31, 201X.

ATTACHMENT A**XYZ Holding Company, Inc.****Addendum to Management's Report of Internal Control over Financial Reporting
For the Year Ended December 31, 201X**

For purposes of this filing, the "Section 404 Report" means Management's Report of Internal Control over Financial Reporting and the report of independent registered public accounting firm on internal control over financial reporting contained in or incorporated by reference in the Company's Form 10-K/20-F. Accordingly, as required by [relevant state statute or Section 17C of the Model], management of XYZ hereby affirms that the only material processes with respect to the preparation of the audited statutory financial statements of the Group of insurers that were excluded from the Section 404 Report are the processes discussed below. Management of XYZ hereby affirms that all other material processes with respect to the preparation of the audited statutory financial statements of the Group of insurers were included in the Section 404 Report. The following statutory financial reporting processes were reviewed separately from the internal controls reported by the Group of insurers in its Section 404 report:

Significant Control Processes not tested due to Group Materiality Considerations

The Section 404 report excludes certain control processes deemed material to individual insurance legal entities included within the Group of insurers. This exclusion was due to group materiality decisions made at the parent company level. These processes, and the legal entities within the Group of insurers impacted, are listed as follows:

Workers' Compensation Claims Processing – The HIJ claims processing system is utilized to process workers' compensation claims material to ABC Insurance Subsidiary and DEF Insurance Subsidiary.

Related Party Transactions Eliminated through Consolidation

The Section 404 report does not consider controls surrounding related party transactions as the effects of those transactions are eliminated through consolidation at the holding company financial statement level. Significant related party transactions, and the legal entities within the Group of insurers impacted, are listed as follows:

Affiliate reinsurance agreements – A significant amount of reinsurance coverage is obtained by ABC Insurance Subsidiary and DEF Insurance Subsidiary through contracts with XYZ Parent Company.

Management service agreements – ABC Insurance Subsidiary receives all of its management services through an agreement with XYZ Parent Company.

Tax allocation agreements – ABC Insurance Subsidiary and DEF Insurance Subsidiary are subject to an intercompany tax allocation agreement with XYZ Parent Company.

Deferred Income Taxes

Federal income taxes are provided for XYZ's estimated current and deferred liability. Deferred taxes are provided for differences between the financial statement and tax bases of assets and liabilities. Pursuant to *SSAP No. 101—Income Taxes*, changes in deferred tax assets and liabilities are recognized as a separate component of gains and losses in statutory surplus, while under GAAP/IFRS, these changes are included in income tax expense or benefit. Gross deferred tax assets not meeting the realization criteria outlined in *SSAP No. 101* are not admitted.

Nonadmitted Assets

Certain XYZ assets (principally furniture, equipment, prepaid expenses, agents' balances, and certain deferred tax assets) have been designated as nonadmitted assets under statutory accounting guidance (primarily in *SSAP No. 4—Assets and Nonadmitted Assets* and *SSAP No. 20—Nonadmitted Assets*). Such nonadmitted assets are excluded from assets by a charge to statutory surplus. Under GAAP/IFRS, such amounts are carried at amortized cost with an appropriate valuation allowance, as necessary.

Asset Valuation Reserve (“AVR”)

The AVR represents a statutory contingency reserve for life and health insurers for credit related risk on most invested assets, and is charged to surplus pursuant to *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. No such reserve is required under GAAP/IFRS accounting.

Interest Maintenance Reserve (“IMR”)

The IMR represents the deferral of interest-related realized gains and losses, net of tax, on primarily fixed maturity investments, amortized into income over the remaining life of the investment sold pursuant to *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. No such reserve is required under GAAP/IFRS accounting.

Management of XYZ conducted an assessment of the internal controls over these processes and concluded that they were effective with respect to the audited statutory financial statements.

(Please note that this is not intended to be an all-inclusive list. It should only include material process that were not covered in the Section 404 Report. The facts and circumstances of each situation will determine the items to be included.)

EXAMPLE D: AN SEC REGISTRANT OR A MEMBER OF A HOLDING COMPANY SYSTEM WHO IS A SEC REGISTRANT AND IS A NON-ACCELERATED FILER THAT DID NOT HAVE ALL MATERIAL CONTROL PROCESSES OVER STATUTORY FINANCIAL REPORTING ADDRESSED IN ITS SECTION 404 REPORT. FOR THESE NON-ACCELERATED FILERS, THE SECTION 404 REPORT DOES NOT REQUIRE THE REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM ON INTERNAL CONTROL OVER FINANCIAL REPORTING.

Management’s Report of Internal Control over Financial Reporting

XYZ Holding Company, Inc. (“XYZ”) is required to file annual reports on Form 10-K/20-F with the U.S. Securities and Exchange Commission. Each of the insurance companies listed on Attachment B is a wholly owned subsidiary of XYZ. For the purpose of XYZ’s Management’s Report of Internal Control over Financial Reporting, management has identified its “Group of insurers,” as that term is defined in [relevant state statute or Section 3H of the Model] as the insurance companies listed on Attachment B.

Management of XYZ is responsible for establishing and maintaining adequate internal control over statutory financial reporting. XYZ’s internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements in accordance with statutory accounting principles. Management conducted an assessment of the effectiveness, as of December 31, 201X, of the Group of insurers’ internal control over statutory financial reporting, based on the framework established in Internal Control—Integrated Framework Issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO). Based on our assessment under that framework, management concluded that the Group of insurers’ internal control over statutory financial reporting is effective to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements as of December 31, 201X.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are also subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In satisfaction of the Group of insurers’ obligation to deliver Management’s Report of Internal Control over Financial Reporting for the fiscal year ended December 31, 201X, as permitted by [relevant state statute or Section 17 of the Model], XYZ is hereby providing the Insurance Commissioner of [domiciliary state] copies of Management’s Report of Internal Control over Financial Reporting included in XYZ’s Form 10-K/20-F for the fiscal year ended December 31, 201X (or alternatively the Annual Report to Stockholders). This does not include a report of independent registered public accounting firm on internal control over financial reporting for XYZ, as it is not required for non-accelerated filers. In addition, an Addendum (Attachment A) is included to this report which identifies the material processes that were not included in the Section 404 Report (as defined in Attachment A).

Based on management review of internal controls, there were no unremediated material weaknesses as of December 31, 201X identified as part of the Group of insurers’ internal control structure over the statutory financial statements for the year ended December 31, 201X.

ATTACHMENT A**XYZ Holding Company, Inc.****Addendum to Management's Report of Internal Control over Financial Reporting
For the Year Ended December 31, 201X**

For purposes of this filing, the "Section 404 Report" means Management's Report of Internal Control over Financial Reporting only contained in or incorporated by reference in the Company's Form 10-K/20-F. This does not include a report of independent registered public accounting firm on internal control over financial reporting, as it is not required for non-accelerated filers. Accordingly, as required by [relevant state statute or Section 17 of the Model], management of XYZ hereby affirms that the only material processes with respect to the preparation of the audited statutory financial statements of the Group of insurers that were excluded from the Section 404 Report are the processes discussed below. Management of XYZ hereby affirms that all other material processes with respect to the preparation of the audited statutory financial statements of the Group of insurers were included in the Section 404 Report.

Significant Control Processes not tested due to Group Materiality Considerations

The Section 404 report excludes certain control processes deemed material to individual insurance legal entities included within the Group of insurers. This exclusion was due to group materiality decisions made at the parent company level. These processes, and the legal entities within the Group of insurers impacted, are listed as follows:

Workers' Compensation Claims Processing – The HIJ claims processing system is utilized to process workers' compensation claims material to ABC Insurance Subsidiary and DEF Insurance Subsidiary.

Related Party Transactions Eliminated through Consolidation

The Section 404 report does not consider controls surrounding related party transactions as the effects of those transactions are eliminated through consolidation at the holding company financial statement level. Significant related party transactions, and the legal entities within the Group of insurers impacted, are listed as follows:

Affiliate reinsurance agreements – A significant amount of reinsurance coverage is obtained by ABC Insurance Subsidiary and DEF Insurance Subsidiary through contracts with XYZ Parent Company.

Management service agreements – ABC Insurance Subsidiary receives all of its management services through an agreement with XYZ Parent Company.

Tax allocation agreements – ABC Insurance Subsidiary and DEF Insurance Subsidiary are subject to an intercompany tax allocation agreement with XYZ Parent Company.

Deferred Income Taxes

Federal income taxes are provided for XYZ's estimated current and deferred liability. Deferred taxes are provided for differences between the financial statement and tax bases of assets and liabilities. Pursuant to *SSAP No. 101—Income Taxes*, changes in deferred tax assets and liabilities are recognized as a separate component of gains and losses in statutory surplus, while under GAAP/IFRS, these changes are included in income tax expense or benefit. Gross deferred tax assets not meeting the realization criteria outlined in *SSAP No. 101* are not admitted.

Nonadmitted Assets

Certain XYZ assets (principally furniture, equipment, prepaid expenses, agents' balances, and certain deferred tax assets) have been designated as nonadmitted assets under statutory accounting guidance (primarily in *SSAP No. 4—Assets and Nonadmitted Assets* and *SSAP No. 20—Nonadmitted Assets*). Such nonadmitted assets are excluded from assets by a charge to statutory surplus. Under GAAP/IFRS, such amounts are carried at amortized cost with an appropriate valuation allowance, as necessary.

Asset Valuation Reserve (“AVR”)

The AVR represents a statutory contingency reserve for life and health insurers for credit related risk on most invested assets, and is charged to surplus pursuant to *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. No such reserve is required under GAAP/IFRS accounting.

Interest Maintenance Reserve (“IMR”)

The IMR represents the deferral of interest-related realized gains and losses, net of tax, on primarily fixed maturity investments, amortized into income over the remaining life of the investment sold pursuant to *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. No such reserve is required under GAAP/IFRS accounting.

Management of XYZ conducted an assessment of the internal controls over these processes and concluded that they were effective with respect to the audited statutory financial statements.

(Please note that this is not intended to be an all-inclusive list. It should only include material process that were not covered in the Section 404 Report. The facts and circumstances of each situation will determine the items to be included.)

EXAMPLE E: A NON-SEC REGISTRANT OR A MEMBER OF A HOLDING COMPANY SYSTEM THAT VOLUNTARILY COMPLIED WITH SECTION 404 OF THE SARBANES-OXLEY ACT AND PRODUCED A REPORT ON INTERNAL CONTROLS WHICH INCLUDED AN AUDITOR’S OPINION

Management’s Report of Internal Control over Financial Reporting

As a non-SEC registrant, XYZ Holding Company, Inc. (“XYZ”) is not required to prepare or file with the U.S. Securities and Exchange Commission a Sarbanes-Oxley Act Section 404 report on internal control over financial reporting. However, management has elected to prepare, and have audited by XYZ’s independent certified public accountant, such a report for the fiscal year-ended December 31, 201X.

Each of the insurance companies listed on Attachment B is a wholly owned subsidiary of XYZ. For the purpose of XYZ’s Management’s Report of Internal Control over Financial Reporting, management has identified its “Group of insurers,” as that term is defined in [relevant state statute or Section 3H of the Model], as the insurance companies listed on Attachment B.

Management of XYZ is responsible for establishing and maintaining adequate internal control over statutory financial reporting. XYZ’s internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements in accordance with statutory accounting principles. Management conducted an assessment of the effectiveness, as of December 31, 201X, of the Group of insurers’ internal control over statutory financial reporting, based on the framework established in *Internal Control—Integrated Framework Issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)*. Based on our assessment under that framework, management concluded that the Group of insurers’ internal control over statutory financial reporting is effective to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements as of December 31, 201X.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are also subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In satisfaction of the Group of insurers’ obligation to deliver Management’s Report of Internal Control over Financial Reporting for the fiscal year ended December 31, 201X, as permitted by [relevant state statute or Section 17C of the Model], XYZ is hereby providing the Insurance Commissioner of [domiciliary state] the attached copy of XYZ’s Section 404 Report for the fiscal year ended December 31, 201X, which includes Management’s Report of Internal Control over Financial Reporting and report of independent registered public accounting firm on internal control over financial reporting for XYZ. In addition, an Addendum (Attachment A) is included to this report that identifies the material processes that were not included in the Section 404 Report (as defined in Attachment A).

Based on management review of internal controls, there were no unremediated material weaknesses as of December 31, 201X identified as part of the Group of insurers’ internal control structure over the statutory financial statements for the year ended December 31, 201X.

EXAMPLE F: A COMPANY [OR “GROUP OF INSURERS”] THAT IS NOT SUBJECT TO SECTION 404 AND UTILIZED THEIR OWN FRAMEWORK TO EVALUATE CONTROLS

Management’s Report of Internal Control over Financial Reporting

[As a non-SEC registrant, XYZ Holding Company, Inc. (“XYZ”) is not required to prepare or file with the U.S. Securities and Exchange Commission a Sarbanes-Oxley Act Section 404 report on internal control over financial reporting. Each of the insurance companies listed on Attachment A is a wholly owned subsidiary of XYZ. For the purpose of XYZ’s Management’s Report of Internal Control over Financial Reporting, management has identified its “Group of insurers,” as that term is defined in [relevant state statute or Section 3H of the Model], as the insurance companies listed on Attachment A.]

Management of ABC Insurance Company [or XYZ] is responsible for establishing and maintaining adequate internal control over statutory financial reporting. The Company has established an internal control system designed to provide reasonable assurance regarding the fair presentation of statutory financial reporting. The Company developed its own internal framework for evaluating the effectiveness of internal control over statutory financial reporting. The Company’s framework includes the identification and evaluation of the company’s internal control environment and areas of potential material internal control risk, documentation of existing internal controls, monitoring and testing of those key controls, documentation of remedial actions planned or taken, if any, and communication of the findings of the evaluation by the Company’s senior management to the Audit committee of the Board of Directors.

Management conducted an assessment of the effectiveness, as of December 31, 201X, of the Company’s internal control over statutory financial reporting, which included identifying, reviewing, monitoring and testing significant internal controls over statutory financial reporting. Based on our assessment under the above described approach and through diligent inquiry, management has concluded that the Company’s internal control over statutory financial reporting is effective to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements as of December 31, 201X.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are also subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Based on management review of internal controls, there were no unremediated material weaknesses as of December 31, 201X identified as part of the Company’s internal control structure over the statutory financial statements for the year ended December 31, 201X.

Not for Distribution

EXAMPLE G: AN SEC REGISTRANT OR A MEMBER OF A HOLDING COMPANY SYSTEM WHOSE PARENT IS AN SEC REGISTRANT THAT HAD ALL MATERIAL CONTROL PROCESSES ADDRESSED IN THEIR SECTION 404 REPORT AND HAD AN UNREMIEDIATED MATERIAL WEAKNESS

Management's Report of Internal Control over Financial Reporting

XYZ Holding Company, Inc. ("XYZ") is required to file annual reports on Form 10-K/20-F with the U.S. Securities and Exchange Commission. Each of the insurance companies listed on Attachment B is a wholly-owned subsidiary of XYZ. For the purpose of XYZ's Management's Report of Internal Control over Financial Reporting, management has identified its "Group of insurers," as that term is defined in [relevant state statute or Section 3H of the Model], as the insurance companies listed on Attachment B.

Management of XYZ is responsible for establishing and maintaining adequate internal control over statutory financial reporting. XYZ's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements in accordance with statutory accounting principles.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are also subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

Management conducted an assessment of the effectiveness, as of December 31, 201X, of the Group of insurers' internal control over statutory financial reporting, based on the framework established in *Internal Control—Integrated Framework Issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)*.

A material weakness was noted in XYZ's internal control over financial reporting related to the calculation of insurance reserves. Due to the manner in which the data for homeowners policies are captured by the systems used in its Southeastern US regional office, changes in XYZ's estimate of insurance reserves for certain policies are not reviewed by XYZ's Actuarial Department prior to being recorded in the company's accounting records.

A material weakness is a deficiency or a combination of deficiencies in internal control, such that there is a reasonable possibility that a material misstatement of the company's financial statements will not be prevented, or detected and corrected on a timely basis. In connection with the weakness noted above, XYZ's management has taken remedial actions to change its procedures for coding policies issued in the states affected so that all homeowners policy data are included in the Actuarial Department review of estimate of insurance reserves. This change was effective on July 1, 20XX.

As a result of the unremediated material weakness described above, XYZ management has concluded that, as of December 31, 201X, XYZ's internal control over statutory financial reporting was not effective.

In satisfaction of the Group of insurers' obligation to deliver Management's Report of Internal Control over Financial Reporting for the fiscal year ended December 31, 201X, as permitted by [relevant state statute or Section 17C of the Model], XYZ is hereby providing the Insurance Commissioner of [domiciliary state] copies of Management's Report of Internal Control over Financial Reporting and the report of independent registered public accounting firm on internal control over financial reporting for XYZ included in XYZ's Form 10-K/20-F for the fiscal year ended December 31, 201X (or alternatively the Annual Report to Stockholders). In addition, an Addendum (Attachment A) is included to this report which identifies the material processes that were not included in the Section 404 Report (as defined in Attachment A).

EXAMPLE H: AN SEC REGISTRANT OR MEMBER OF A HOLDING COMPANY SYSTEM WHOSE PARENT IS AN SEC REGISTRANT THAT DID NOT INCLUDE ALL MATERIAL PROCESSES OVER STATUTORY FINANCIAL REPORTING ADDRESSED IN ITS SECTION 404 REPORT AND HAD AN UNREMIEDIATED MATERIAL WEAKNESS NOTED

Management’s Report of Internal Control over Financial Reporting

XYZ Holding Company, Inc. (“XYZ”) is required to file annual reports on Form 10-K/20-F with the U.S. Securities and Exchange Commission. Each of the insurance companies listed on Attachment B is a wholly-owned subsidiary of XYZ. For the purpose of XYZ’s Management’s Report of Internal Control over Financial Reporting, management has identified its “Group of insurers,” as that term is defined in [relevant state statute or Section 3H of the Model], as the insurance companies listed on Attachment B.

Management of XYZ is responsible for establishing and maintaining adequate internal control over statutory financial reporting. XYZ’s internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements in accordance with statutory accounting principles. Management conducted an assessment of the effectiveness, as of December 31, 201X, of the Group of insurers’ internal control over statutory financial reporting, based on the framework established in *Internal Control—Integrated Framework Issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)*.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are also subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

A material weakness was noted in XYZ’s internal control over financial reporting related to the calculation of insurance reserves. Due to the manner in which the data for homeowners policies are captured by the systems used in its Southeastern US regional office, changes in XYZ’s estimate of insurance reserves for certain policies are not reviewed by XYZ’s Actuarial Department prior to being recorded in the company’s accounting records.

A material weakness is a deficiency or a combination of deficiencies in internal control, such that there is a reasonable possibility that a material misstatement of the company’s financial statements will not be prevented, or detected and corrected on a timely basis. In connection with the assessment above, XYZ’s management identified a material weakness as of December 31, 201X in the controls over the calculation of insurance reserves.

As a result of the unremediated material weakness described above, XYZ management has concluded that, as of December 31, 201X, XYZ’s internal control over statutory financial reporting was not effective.

In satisfaction of the Group of insurers’ obligation to deliver Management’s Report of Internal Control over Financial Reporting for the fiscal year ended December 31, 201X, as permitted by [relevant state statute or Section 17C of the Model], XYZ is hereby providing the Insurance Commissioner of [domiciliary state] copies of Management’s Report of Internal Control over Financial Reporting and the report of independent registered public accounting firm on internal control over financial reporting for XYZ included in XYZ’s Form 10-K for the fiscal year ended December 31, 201X (or alternatively the Annual Report to Stockholders). In addition, an Addendum (Attachment A) is included to this report which identifies the material processes that were not included in the Section 404 Report (as defined in Attachment A).

ATTACHMENT A

XYZ Holding Company, Inc.

Addendum to Management's Report of Internal Control over Financial Reporting For the Year Ended December 31, 201X

For purposes of this filing, the "Section 404 Report" means Management's Report of Internal Control over Financial Reporting and the report of independent registered public accounting firm on internal control over financial reporting contained in or incorporated by reference in the Company's Form 10-K/20-F. Accordingly, as required by [relevant state statute or Section 17C of the Model], management of XYZ hereby affirms that the only material processes with respect to the preparation of the audited statutory financial statements of the Group of insurers that were excluded from the Section 404 Report are the processes discussed below. Management of XYZ hereby affirms that all other material processes with respect to the preparation of the audited statutory financial statements of the Group of insurers were included in the Section 404 Report. The following statutory financial reporting processes were reviewed separately from the internal controls reported by the Group of insurers in its Section 404 report:

Significant Control Processes not tested due to Group Materiality Considerations

The Section 404 report excludes certain control processes deemed material to individual insurance legal entities included within the Group of insurers. This exclusion was due to group materiality decisions made at the parent company level. These processes, and the legal entities within the Group of insurers impacted, are listed as follows:

Workers' Compensation Claims Processing – The HIJ claims processing system is utilized to process workers' compensation claims material to ABC Insurance Subsidiary and DEF Insurance Subsidiary.

Related Party Transactions Eliminated through Consolidation

The Section 404 report does not consider controls surrounding related party transactions as the effects of those transactions are eliminated through consolidation at the holding company financial statement level. Significant related party transactions, and the legal entities within the Group of insurers impacted, are listed as follows:

Affiliate reinsurance agreements – A significant amount of reinsurance coverage is obtained by ABC Insurance Subsidiary and DEF Insurance Subsidiary through contracts with XYZ Parent Company.

Management service agreements – ABC Insurance Subsidiary receives all of its management services through an agreement with XYZ Parent Company.

Tax allocation agreements – ABC Insurance Subsidiary and DEF Insurance Subsidiary are subject to an intercompany tax allocation agreement with XYZ Parent Company.

Deferred Income Taxes

Federal income taxes are provided for XYZ's estimated current and deferred liability. Deferred taxes are provided for differences between the financial statement and tax bases of assets and liabilities. Pursuant to *SSAP No. 101—Income Taxes*, changes in deferred tax assets and liabilities are recognized as a separate component of gains and losses in statutory surplus, while under GAAP/IFRS, these changes are included in income tax expense or benefit. Gross deferred tax assets not meeting the realization criteria outlined in *SSAP No. 101* are not admitted.

Nonadmitted Assets

Certain XYZ assets (principally furniture, equipment, prepaid expenses, agents' balances, and certain deferred tax assets) have been designated as nonadmitted assets under statutory accounting guidance (primarily in *SSAP No. 4—Assets and Nonadmitted Assets* and *SSAP No. 20—Nonadmitted Assets*). Such nonadmitted assets are excluded from assets by a charge to statutory surplus. Under GAAP/IFRS, such amounts are carried at amortized cost with an appropriate valuation allowance, as necessary.

Asset Valuation Reserve (“AVR”)

The AVR represents a statutory contingency reserve for life and health insurers for credit related risk on most invested assets, and is charged to surplus pursuant to *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. No such reserve is required under GAAP/IFRS accounting.

Interest Maintenance Reserve (“IMR”)

The IMR represents the deferral of interest-related realized gains and losses, net of tax, on primarily fixed maturity investments, amortized into income over the remaining life of the investment sold pursuant to *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*. No such reserve is required under GAAP/IFRS accounting.

Management of XYZ conducted an assessment of the internal controls over these processes and concluded that they were effective with respect to the audited statutory financial statements.

(Please note that this is not intended to be an all-inclusive list. It should only include material processes that were not covered in the Section 404 Report. The facts and circumstances of each situation will determine the items to be included.)

EXAMPLE I: AN SEC REGISTRANT OR MEMBER OF A HOLDING COMPANY SYSTEM WHOSE PARENT IS AN SEC REGISTRANT THAT HAD ALL MATERIAL PROCESSES OVER STATUTORY FINANCIAL REPORTING ADDRESSED IN ITS SECTION 404 REPORT. HOWEVER, THEY RECENTLY ACQUIRED ANOTHER INSURER THAT IS NOT INCLUDED IN THEIR ASSESSMENT

Management’s Report of Internal Control over Financial Reporting

XYZ Holding Company, Inc. (“XYZ”) is required to file annual reports on Form 10-K/20-F with the U.S. Securities and Exchange Commission. Each of the insurance companies listed on Attachment B is a wholly owned subsidiary of XYZ. For the purpose of XYZ’s Management’s Report of Internal Control over Financial Reporting, management has identified its “Group of insurers,” as that term is defined in [relevant state statute or Section 3H of the Model], as the insurance companies listed on Attachment B.

Management of XYZ is responsible for establishing and maintaining adequate internal control over statutory financial reporting. XYZ’s internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements in accordance with statutory accounting principles. Management conducted an assessment of the effectiveness, as of December 31, 201X, of the Group of insurers’ internal control over statutory financial reporting, based on the framework established in *Internal Control—Integrated Framework Issued by the Committee of Sponsoring Organizations of the Treadway Commission (COSO)*. This assessment excluded an evaluation of internal controls over financial reporting for RST Insurance Company which was recently acquired. Based on our assessment under that framework, management concluded that the Group of insurers’ internal control over statutory financial reporting is effective to provide reasonable assurance regarding the reliability of financial reporting and the preparation of statutory financial statements as of December 31, 201X.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Projections of any evaluation of effectiveness to future periods are also subject to the risk that controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In satisfaction of the Group of insurers’ obligation to deliver Management’s Report of Internal Control over Financial Reporting for the fiscal year ended December 31, 201X, as permitted by [relevant state statute or Section 17C of the Model], XYZ is hereby providing the Insurance Commissioner of [domiciliary state] copies of Management’s Report of Internal Control over Financial Reporting and the report of independent registered public accounting firm on internal control over financial reporting for XYZ included in XYZ’s Form 10-K/20-F for the fiscal year ended December 31, 201X (or alternatively the Annual Report to Stockholders). In addition, an Addendum (Attachment A) is included to this report which identifies the material processes that were not included in the Section 404 Report (as defined in Attachment A).

Based on management review of internal controls, there were no unremediated material weaknesses as of December 31, 201X identified as part of the Group of insurers’ internal control structure over the statutory financial statements for the year ended December 31, 201X.

National Association of Insurance Commissioners

The National Association of Insurance Commissioners (NAIC) is the U.S. standard-setting and regulatory support organization created and governed by the chief insurance regulators from the 50 states, the District of Columbia and five U.S. territories. Through the NAIC, state insurance regulators establish standards and best practices, conduct peer review, and coordinate their regulatory oversight. NAIC staff supports these efforts and represents the collective views of state regulators domestically and internationally. NAIC members, together with the central resources of the NAIC, form the national system of state-based insurance regulation in the U.S.

**Revisions to the
As of March 2021, Accounting Practices and Procedures Manual**

On **March 15, 2021**, the Statutory Accounting Principles (E) Working Group adopted the following revisions to the *As of March 2021 Accounting Practices and Procedures Manual*. Documents associated with these revisions are linked to the reference numbers in bold text below.

Ref #	SSAP/ Appendix	Title	Summary
2019-24	SSAP No. 71	<p>Levelized and Persistency Commission</p> <p><i>Nonsubstantive</i></p> <p>Effective Dec. 31, 2021</p>	Revisions clarify the guidance regarding levelized commissions with a Dec. 31, 2021, effective date. The revisions affirm the long-standing guidance that acquisition costs, including commissions, shall be expensed when incurred. The revisions also clarify that acquisition costs shall be recognized consistently across insurers, regardless of third-party arrangements, and the obligating event is the writing of an insurance policy. The Working Group affirmed by separate vote the nonsubstantive classification of this revision as consistent with the original intent of SSAP No. 71.
2019-34	SSAP No. 25	<p>Related Parties, Disclaimer of Affiliation and Variable Interest Entities</p> <p><i>Nonsubstantive</i></p> <p>Effective Immediately (March 15, 2021)</p>	Revisions clarify, 1) the identification of related parties and ensure that any related party identified under U.S. GAAP or SEC reporting requirements would be considered a related party under statutory accounting principles; 2) that a non-controlling ownership over 10% results in a related party classification regardless of any disclaimer of control or disclaimer of affiliation; 3) that a disclaimer of control or disclaimer does not eliminate the classification as a “related party” and the disclosure of material transactions as required under SSAP No. 25. Additionally, revisions reject several U.S. GAAP standards addressing variable interest entities.
2020-22	SSAP No. 26R	<p>Accounting for Perpetual Bonds</p> <p><i>Nonsubstantive</i></p> <p>Effective Immediately (March 15, 2021)</p>	Revisions clarify that perpetual bonds are within scope of SSAP No. 26R. Those with an effective call option shall be amortized under the yield-to-worst concept, and those that do not possess, or no longer possess, a call feature shall be reported at fair value.

Ref #	SSAP/ Appendix	Title	Summary
2020-32	SSAP No. 26R	SSAP No. 26R – Disclosure Update <i>Nonsubstantive</i> Effective Immediately (March 15, 2021)	Revisions expand current called bond disclosures to include bonds terminated through a tender offer.
2020-33	SSAP No. 32R SSAP No. 86	SSAP No. 32R – Publicly Traded Preferred Stock Warrants <i>Nonsubstantive</i> Effective Immediately (March 15, 2021)	Revisions capture publicly traded preferred stock warrants in scope of SSAP No. 32R and require the warrants to be reported at fair value.
2020-34	SSAP No. 43R	SSAP No. 43R – GSE CRT Program <i>Nonsubstantive</i> Effective Immediately (March 15, 2021)	Revisions incorporate minor scope modifications to reflect recent changes to the Freddie Mac Structured Agency Credit Risk (STACR) and Fannie Mae Connecticut Avenue Securities (CAS) programs and will allow these credit risk transfer securities to remain in scope of SSAP No. 43R when issued through a real estate mortgage investment conduit (REMIC) trust structure.
2020-35	SSAP No. 97	SSAP No. 97 – Audit Opinions <i>Nonsubstantive</i>	This agenda item was disposed without statutory revisions.
2020-39	Appendix F	Interpretation Policy Statement <i>Nonsubstantive</i> Effective Immediately (March 15, 2021)	Revisions clarify the issuance and adoption of accounting interpretations in the <i>NAIC Policy Statement on Maintenance of Statutory Accounting Principles</i> .
2020-40	Preamble	Prescribed Practices <i>Nonsubstantive</i> Effective Immediately (March 15, 2021)	Revisions clarify that while any state in which a company is licensed can require supplementary information that details prescribed practices, the prescribed practices directed by the domiciliary state shall be reflected in the financial statements filed with the NAIC and are the ones subject to independent audit requirements.

Ref #	SSAP/ Appendix	Title	Summary
2020-41	SSAP No. 5R SSAP No. 72 SSAP No. 86	<p><i>ASU 2020-06, Debt—Debt with Conversion and Other Options (Subtopic 470-20) and Derivatives and Hedging—Contracts in Entity’s Own Equity (Subtopic 815-40), Accounting for Convertible Instruments and Contracts in an Entity’s Own Equity</i></p> <p><i>Nonsubstantive</i></p> <p>Effective Immediately (March 15, 2021)</p>	Revisions reject ASU 2020-06 for statutory accounting.
2020-42	Appendix D	<p><i>ASU 2020-07, Presentation of Disclosures by Not-for-Profit Entities</i></p> <p><i>Nonsubstantive</i></p> <p>Effective Immediately (March 15, 2021)</p>	Revisions reject ASU 2020-07 as not applicable to statutory accounting.

Issue: Levelized and Persistency Commission

Check (applicable entity):

	P/C	Life	Health
Modification of existing SSAP	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Description of Issue:

NAIC staff has received regulator inquiries on the application of the levelized commissions guidance in *SSAP No. 71—Policy Acquisition Costs and Commissions*. This agenda item is to recommend clarifications to the existing levelized commissions guidance and provide additional guidance regarding commission that is based on policy persistency. SSAP No. 71 describes that levelized commissions occur in situations in which a third party pays agents non-levelized commissions and the reporting entity pays a third party by levelized payments. The statement notes that it is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid to the third party from the reporting entity. SSAP No. 71 identifies such arrangements as funding agreements between the reporting entity and the third party. SSAP No. 71 then identifies that the use of a commission arrangement where commission payments are not linked to traditional elements (such as premium payments and policy persistency) requires the establishment of a liability for the full amount of the unpaid principal and accrued interest which is payable to a third party related to levelized commissions is required.

The questions received by NAIC staff relate to the use of levelized commission arrangements and when the liability for commission based on annual persistency is required to be recorded as a liability in accordance with *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets*.

Levelized Commission

For the example in question, a third party is paying agent commissions and receiving periodic payments. Consistent with the guidance in SSAP No. 71, paragraph 4, the third party (funding agent) is paying the agents on behalf of the reporting entity and receiving levelized payments from the reporting entity which include additional fees or interest in excess of the commissions. The agreement between the reporting entity and the funding agent specifies that the funding agent will not be reimbursed by the reporting entity if the policies that generate the commission are cancelled prior to the policy anniversary date. The regulator noted that the reporting entity was not accruing the liability to the third-party funding agent, asserting that the payments to the funding agent were theoretically avoidable until the policy had passed the anniversary year-end date.

The accounting issue is whether levelized commission arrangements that are linked to traditional elements (such as premium payments and policy persistency) requires the establishment of a liability for the full amount of the unpaid principal and accrued interest which is payable to a third party related to levelized commissions.

Persistency Commission

Also, in the noted example, the reporting entity was also asserting that the levelized commission obligations related to policy persistency commission were not required to be accrued until the policy anniversary year end had been passed. The reporting entity asserts that the liability is not required until the persistency commission was fully earned by the agent and therefore unavoidable.

The accounting issue is if the persistency commission expense should be accrued proportionately over the policy period to which the commission relates, or if it is accrued only when fully earned and unavoidable.

Existing Authoritative Literature:

Preamble provides the following (**bolding added for emphasis**):

37. Liabilities require recognition as they are incurred. Certain statutorily mandated liabilities may also be required to arrive at conservative estimates of liabilities and probable loss contingencies (e.g., interest maintenance reserves, asset valuation reserves, and others).

38. Revenue should be recognized only as the earnings process of the underlying underwriting or investment business is completed. **Accounting treatments which tend to defer expense recognition do not generally represent acceptable SAP treatment.**

SSAP No. 5 – Revised—Liabilities, Contingencies and Impairments of Assets

Liabilities

2. A liability is defined as certain or probable¹ future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or to provide services to other entities in the future as a result of a past transaction(s) or event(s).

3. A liability has three essential characteristics: (a) it embodies a present duty or responsibility to one or more other entities that entails settlement by probable¹ future transfer or use of assets at a specified or determinable date, on occurrence of a specified event, or on demand, (b) the duty or responsibility obligates a particular entity, leaving it little or no discretion to avoid the future sacrifice, and (c) the transaction or other event obligating the entity has already happened. This includes, but is not limited to, liabilities arising from policyholder obligations (e.g., policyholder benefits, reported claims and reserves for incurred but not reported claims). Liabilities shall be recorded on a reporting entity's financial statements when incurred.

4. Estimates (e.g., loss reserves) are required in financial statements for many ongoing and recurring activities of a reporting entity. The mere fact that an estimate is involved does not of itself constitute a loss contingency. For example, estimates of losses utilizing appropriate actuarial methodologies meet the definition of liabilities as outlined above and are not loss contingencies.

Loss Contingencies or Impairments of Assets

6. For purposes of implementing the statutory accounting principles of loss contingency or impairment of an asset described below, the following additional definitions shall apply:

- a. Probable—The future event or events are likely to occur;
- b. Reasonably Possible—The chance of the future event or events occurring is more than remote but less than probable;
- c. Remote—The chance of the future event or events occurring is slight.

7. A loss contingency or impairment of an asset is defined as an existing condition, situation, or set of circumstances involving uncertainty as to possible loss to an enterprise that will ultimately be resolved when one or more future event(s) occur or fail to occur (e.g., collection of receivables).

8. An estimated loss from a loss contingency or the impairment of an asset shall be recorded by a charge to operations if both of the following conditions are met:

- a. Information available prior to issuance of the statutory financial statements indicates that **it is probable that an asset has been impaired or a liability has been incurred** at the date of the statutory financial statements. It is implicit in this condition that it is probable

- that one or more future events will occur confirming the fact of the loss or incurrence of a liability; and
- b. The amount of loss can be reasonably estimated.

SSAP No. 71—Policy Acquisition Costs and Commissions provides the following (**bolding added for emphasis**):

SUMMARY CONCLUSION

2. Acquisition costs are those costs that are incurred in the acquisition of new and renewal insurance contracts and include those costs that vary with and are primarily related to the acquisition of insurance contracts (e.g., agent and broker commissions, certain underwriting and policy issue costs, and medical and inspection fees). **Acquisition costs and commissions shall be expensed as incurred. Determination of when acquisition costs and commissions have been incurred shall be made in accordance with SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets.**

3. Contingent commission liabilities shall be determined in accordance with the terms of each individual commission agreement. Commission liabilities determined on the basis of a formula that relates to loss experience shall be established for the earned portion. **Assumptions used to calculate the contingent commission liability shall be consistent with the terms of the policy contract and with the assumptions made in recording other assets and liabilities necessary to reflect underwriting results of the reporting entity such as retrospective premium adjustments and loss reserves, including incurred but not reported.**

4. **Levelized commissions occur in situations where agents receive normal (non-level) commissions with payments made by a third party.** It is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid (with interest explicit or implied) to the third party by levelized payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the reporting entity. These transactions are, in fact, funding agreements between a reporting entity and a third party. **The continuance of the stream of payments specified in the levelized commission contract is a mechanism to bypass recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of the premium payment or the maintenance of the agent's license with the reporting entity is not maintained with respect to the payment stream.**

5. The use of an arrangement where commission payments are not linked to traditional elements such as premium payments and policy persistency, but rather are linked to the repayment of an advance amount requires the establishment of a liability for the full amount of the unpaid principal and accrued interest which is payable to a third party related to levelized commissions.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): Not applicable

Staff Review Completed by:

Robin Marcotte, NAIC Staff – July 2019

Staff Recommendation:

NAIC Staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose revisions to SSAP No. 71 as illustrated below. NAIC Staff recommends that revisions to the guidance clarify the following:

1. A levelized commission arrangement (whether linked to traditional or nontraditional elements) require the establishment of a liability for the full amount of the unpaid principal and accrued interest payable to a third party at the time the policy is issued.
2. The persistency commission is accrued proportionately over the policy period in which the commission relates to and is not deferred until fully earned.

These recommendations are consistent with the original intent of SSAP No. 71 as well as the Statutory Statement of Concepts focusing on Recognition (excerpts from Preamble, paragraphs 37 and 38):

- Liabilities require recognition as they are incurred.
- Accounting treatments which tend to defer expense recognition do not generally represent acceptable SAP treatment.

July 2019 Proposed Revisions to SSAP No. 71:

SUMMARY CONCLUSION

2. Acquisition costs are those costs that are incurred in the acquisition of new and renewal insurance contracts and include those costs that vary with and are primarily related to the acquisition of insurance contracts (e.g., agent and broker commissions, certain underwriting and policy issue costs, and medical and inspection fees). Acquisition costs and commissions shall be expensed as incurred. Determination of when acquisition costs and commissions have been incurred shall be made in accordance with SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets. [The recognition of commission expense for new and renewal insurance contracts meets the definition of a liability under SSAP No. 5R when the policy is issued or renewed. The issuance of the policy is the obligating event under SSAP No. 5R.](#)

3. Contingent commission liabilities shall be determined in accordance with the terms of each individual commission agreement. Commission liabilities determined on the basis of a formula that relates to loss experience shall be established for the earned portion. Assumptions used to calculate the contingent commission liability shall be consistent with the terms of the policy contract and with the assumptions made in recording other assets and liabilities necessary to reflect underwriting results of the reporting entity such as retrospective premium adjustments and loss reserves, including incurred but not reported. [Commission contracts that include persistency \(or other such components\) shall not use these clauses to defer recognition of commission expense. If a commission is based on annual policy persistency \(or similar components\), the commission is accrued based on experience to date for the policy period \(it is inappropriate to wait until the amount is fully earned and/or unavoidable\). Actual policy cancellation would reverse the accrual of the related persistency commission.](#)

4. Levelized commissions occur in situations where agents receive normal (non-level) commissions with payments made by a third party. It is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid (with interest explicit or implied) to the third party by levelized payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the reporting entity. These transactions are, in fact, funding agreements between a reporting entity and a third party. The continuance of the stream of payments specified in the levelized commission contract is a mechanism to bypass recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of the premium payment or the maintenance of the agent's license with the reporting entity is not maintained with respect to the payment stream.

5. The use of an arrangement where commission payments are not linked to traditional elements such as premium payments and policy persistency, but rather are linked to the repayment of an advance amount requires the establishment of a liability for the full amount of the unpaid principal and accrued interest which is payable to a third party related to levelized commissions^{FN}.

[New Footnote – The guidance in this paragraph does not imply that levelized commissions that are linked to traditional elements do not require establishment of a liability. Rather, such levelized commissions are captured in paragraphs 3-4.](#)

Status:

On August 3, 2019, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to *SSAP No. 71—Policy Acquisition Costs and Commissions*, as illustrated above, to clarify levelized commissions guidance and provide additional direction regarding commissions that are based on policy persistency. The revisions also clarify that the recognition of commission expense is based on experience to date.

For Fall 2019 Discussion NAIC staff has proposed updates for exposure.

Paragraph 2 - Removed previously exposed revisions as unneeded.

Paragraph 3 - Added clarifying phrases regarding persistency commission accrual. The concept is that normal persistency commission is accrued for the period it relates to unless the policy is cancelled.

Paragraph 4 - Added two clarifying phrases to assist with identifying levelized commission funding agreements.

Paragraph 5 - Added clarifying phrases regarding funding agreements.

Footnote 1 - Redrafted to remove double negative wording.

Fall 2019 Proposed Revisions to SSAP No. 71:

SUMMARY CONCLUSION

2. Acquisition costs are those costs that are incurred in the acquisition of new and renewal insurance contracts and include those costs that vary with and are primarily related to the acquisition of insurance contracts (e.g., agent and broker commissions, certain underwriting and policy issue costs, and medical and inspection fees). Acquisition costs and commissions shall be expensed as incurred. Determination of when acquisition costs and commissions have been incurred shall be made in accordance with SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets.

3. Contingent commission liabilities shall be determined in accordance with the terms of each individual commission agreement. Commission liabilities determined on the basis of a formula that relates to loss experience shall be established for the earned portion. Assumptions used to calculate the contingent commission liability shall be consistent with the terms of the policy contract and with the assumptions made in recording other assets and liabilities necessary to reflect underwriting results of the reporting entity such as retrospective premium adjustments and loss reserves, including incurred but not reported. [Commission contracts that include persistency \(or other such components\) shall not use these clauses to defer recognition of commission expense. If a commission is based on annual policy persistency \(or other similar components\), the commission shall be accrued based on experience to date for the policy period that the commission relates. In regard to persistency commission, it is inappropriate to wait until the amount is fully earned and/or unavoidable to accrue experience to date commission expenses. Actual policy cancellation would reverse the accrual of the related persistency commission.](#)

4. Levelized commissions occur in situations where agents receive normal (non-level) commissions with payments made by a third party. It is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid (with interest explicit or implied) to the third party by levelized payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the reporting entity. [\(Note: levelized repayments made by the reporting entity extend the repayment period but might not be a straight-line repayment.\)](#) These transactions are, in fact, funding agreements between a reporting entity and a third party, [regardless of how the payment to the third party is characterized.](#) The continuance of the stream of payments specified in the levelized commission contract is a mechanism to bypass recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of the premium payment or the maintenance of the agent's license with the reporting entity is not maintained with respect to the payment stream.

5. The use of an arrangement [such as a levelized commission arrangement](#) where commission payments are not linked to traditional elements such as premium payments and policy persistency, but rather are linked to the repayment of an advance amount [paid by a third party to the agents](#) requires the establishment of a liability [by the reporting entity](#) for the full amount of the unpaid principal and accrued interest which is payable to a third party related to levelized commissions^{FN}.

[New Footnote – The guidance in this paragraph notes that levelized commissions which use a third party to pay agents that are linked to traditional elements require establishment of a liability for the amounts that have been paid to the agents and any interest accumulated to date.](#)

On December 7, 2019, the Statutory Accounting Principles (E) Working Group exposed revisions to *SSAP No. 71—Policy Acquisition Costs and Commissions*, as illustrated above, to include additional NAIC staff modifications regarding persistency commission and levelized commission arrangements to address certain comments received and to allow for further discussion. With this exposure, the Working Group directed a notification of the exposure to be sent to the Life Actuarial (A) Task Force.

On March 18, 2020, the Statutory Accounting Principles (E) Working Group deferred discussion of this item for a subsequent call or meeting.

On July 30, 2020, the Statutory Accounting Principles (E) Working Group exposed revisions to *SSAP No. 71—Policy Acquisition Costs and Commissions*, as illustrated below. Exposed revisions clarify existing levelized commissions guidance which requires full recognition of the funding liabilities incurred to date for commission expenses prepaid on behalf of an insurer. The exposed revisions are consistent with the 2019 Fall National Meeting exposure, with the inclusion of guidance to clarify that reporting entities that have not complied with the original intent shall reflect the change as a correction of an error, in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*, in the year-end 2020 financial statements.

July 30, 2020 Exposed Revisions to SSAP No. 71:

SUMMARY CONCLUSION

2. Acquisition costs are those costs that are incurred in the acquisition of new and renewal insurance contracts and include those costs that vary with and are primarily related to the acquisition of insurance contracts (e.g., agent and broker commissions, certain underwriting and policy issue costs, and medical and inspection fees). Acquisition costs and commissions shall be expensed as incurred. Determination of when acquisition costs and commissions have been incurred shall be made in accordance with *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets*.

3. Contingent commission liabilities shall be determined in accordance with the terms of each individual commission agreement. Commission liabilities determined on the basis of a formula that relates to loss experience shall be established for the earned portion. Assumptions used to calculate the contingent commission liability shall be consistent with the terms of the policy contract and with the assumptions made in recording other assets and liabilities necessary to reflect underwriting results of the reporting entity such as retrospective premium adjustments and loss reserves, including incurred but not reported. [Commission contracts that include persistency \(or other such components\) shall not use these clauses to defer recognition of commission expense. If a commission is based on annual policy persistency \(or other similar components\), the commission shall be accrued based on experience to date for the policy period that the commission relates. In regard to persistency commission, it is inappropriate to wait until the amount is fully earned and/or unavoidable to accrue experience to date commission expenses. Actual policy cancellation would reverse the accrual of the related persistency commission.](#)

4. Levelized commissions occur in situations where agents receive normal (non-level) commissions with payments made by a third party. It is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid (with interest explicit or implied) to the third party by levelized payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the reporting entity. [\(Note: levelized repayments made by the reporting entity extend the repayment period but might not be a straight-line repayment.\)](#) These

transactions are, in fact, funding agreements between a reporting entity and a third party, regardless of how the payment to the third party is characterized. The continuance of the stream of payments specified in the levelized commission contract is a mechanism to bypass recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of the premium payment or the maintenance of the agent's license with the reporting entity is not maintained with respect to the payment stream.

5. The use of an arrangement such as a levelized commission arrangement where commission payments are not linked to traditional elements such as premium payments and policy persistency, but rather are linked to the repayment of an advance amount paid by a third party to the agents requires the establishment of a liability by the reporting entity for the full amount of the unpaid principal and accrued interest which is payable to a third party related to levelized commissions ^{FN}.

New Footnote – The guidance in this paragraph notes that levelized commissions which use a third party to pay agents that are linked to traditional elements require establishment of a liability for the amounts that have been paid to the agents and any interest accumulated to date.

Effective Date and Transition

7. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. The nonsubstantive revisions adopted regarding levelized commission intend to clarify the original intent of this statement. Reporting entities that have not complied with the original intent of the statement shall reflect the change as a correction of an error (as a mistake in the application of an accounting principle) pursuant to SSAP No. 3 in the December 31, 2020 financial statements. In accordance with SSAP No. 3, correction of all accounting errors in previously issued financial statements, for which an amended financial statement was not filed, shall be reported as an adjustment to unassigned funds (surplus) in the period in which the error was detected. Disclosure shall also occur in accordance with SSAP No. 3.

On October 15, 2020, the Statutory Accounting Principles (E) Working Group held a hearing to receive comments, resulting in updated exposed revisions to *SSAP No. 71—Policy Acquisition Costs and Commissions*, as illustrated below. The updated exposed revisions clarify existing levelized commissions guidance, which requires full recognition of funding agreement liabilities incurred for commission expenses obligated when an insurance policy is written. (This guidance clarifies that writing the insurance policy is the obligating event for initial sales commission.) The exposed revisions have the following key changes from the prior exposure:

1. Improved description of the funding agreements in paragraphs 4 and 5.
2. Deletes the previously proposed revisions in paragraph 3 regarding other types of commission to address the comments received regarding unintended impacts on traditional renewal commission.
3. Modifies the revisions in paragraph 7 to remove the language on correction of an error.
4. Proposes the nonsubstantive revisions apply to contracts in effect on Jan. 1, 2021.

For ease of review the following pages illustrate the October 15, 2020 exposed revisions in two formats:

1. **Exposure reflecting tracked revisions to Existing SSAP No. 71**
2. **October 2020 (new) Shaded Revisions to prior July exposure**

Oct. 2020 Exposure of Tracked Revisions to Existing SSAP No. 71

2. Acquisition costs are those costs that are incurred in the acquisition of new and renewal insurance contracts and include those costs that vary with and are primarily related to the acquisition of insurance contracts (e.g., agent and broker commissions, certain underwriting and policy issue costs, and medical and inspection fees). Acquisition costs and commissions shall be expensed as incurred. Determination of when acquisition costs and commissions have been incurred shall be made in accordance with *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets*.

3. Contingent commission liabilities shall be determined in accordance with the terms of each individual commission agreement. Commission liabilities determined on the basis of a formula that relates to loss experience shall be established for the earned portion. Assumptions used to calculate the contingent commission liability shall be consistent with the terms of the policy contract and with the assumptions made in recording other assets and liabilities necessary to reflect underwriting results of the reporting entity such as retrospective premium adjustments and loss reserves, including incurred but not reported.

4. Levelized commissions occur in situations where agents receive normal (non-level) commissions with payments made by a third party. It is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid (with interest explicit or implied) to the third party by levelized payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the reporting entity. (Note: levelized repayments made by the reporting entity extend the repayment period but might not be a straight-line repayment.) These transactions are, in fact, funding agreements between a reporting entity and a third party, regardless of how the payment to the third party is characterized. The continuance of the stream of payments specified in the levelized commission contract is a mechanism which attempts to bypass recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of the premium payment or the maintenance of the agent's license with the reporting entity is not maintained with respect to the payment stream.

5. The use of an arrangement such as a levelized commission arrangement where commission payments are not linked to traditional elements such as premium payments and policy persistency, but rather are linked to the repayment of an advance amount paid by a third party to the direct selling agents requires the establishment of a liability by the reporting entity for the full amount of the unpaid principal and accrued interest which is payable to a third party related to levelized commissions ^{EN}. Arrangements that use a third party to pay agents who write policies for the reporting entity and the insured can be an attempt to de-link the relationship between the insurer and those agents and defer or levelize the acquisition commissions. The insurance reporting entity is required to recognize the full amount of earned commission costs to the direct policy writing agents even if those costs are paid indirectly to the agents by a third party through the use of levelized commission, or similar arrangement, which is in substance a funding arrangement. Having a third party pay commission costs to the selling agent is strong evidence of a potential funding arrangement which shall be recognized as a liability because the substance of the arrangement indicates that repayment is reasonable and probable, even if a contingency has been incorporated into the funding arrangement, unless the underlying policy has been cancelled. A third-party structure cannot recharacterize (e.g. by referencing policy persistency) and delay recognition of liabilities for initial sales commission owed from the writing of policies regardless of how a third-party arrangement is structured with regards to the timing of payment from the insurer. The amount owed for full initial sales commission shall be recognized immediately as the writing of an insurance contract is the event that obligates the insurer, and such action shall occur consistently among insurers. As such, this recognition is required regardless if the insurer owes a selling agent directly or if a third-party has been contracted to provide payment to the selling agent.

Effective Date and Transition

7. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—*Accounting Changes and Corrections of Errors*. The nonsubstantive revisions adopted regarding levelized commission are to clarify the original intent of this statement and are effective January 1, 2021.

October 2020 (new) Shaded Revisions to prior July exposure

2. Acquisition costs are those costs that are incurred in the acquisition of new and renewal insurance contracts and include those costs that vary with and are primarily related to the acquisition of insurance contracts (e.g., agent and broker commissions, certain underwriting and policy issue costs, and medical and inspection fees). Acquisition costs and commissions shall be expensed as incurred. Determination of when acquisition costs and commissions have been incurred shall be made in accordance with SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets.

3. Contingent commission liabilities shall be determined in accordance with the terms of each individual commission agreement. Commission liabilities determined on the basis of a formula that relates to loss experience shall be established for the earned portion. Assumptions used to calculate the contingent commission liability shall be consistent with the terms of the policy contract and with the assumptions made in recording other assets and liabilities necessary to reflect underwriting results of the reporting entity such as retrospective premium adjustments and loss reserves, including incurred but not reported. ~~Commission contracts that include persistency (or other such components) shall not use these clauses to defer recognition of commission expense. If a commission is based on annual policy persistency (or other similar components), the commission shall be accrued based on experience to date for the policy period that the commission relates. In regard to persistency commission, it is inappropriate to wait until the amount is fully earned and/or unavoidable to accrue experience to date commission expenses. Actual policy cancellation would reverse the accrual of the related persistency commission.~~

4. Levelized commissions occur in situations where agents receive normal (non-level) commissions with payments made by a third party. It is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid (with interest explicit or implied) to the third party by levelized payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the reporting entity. ~~(Note: levelized repayments made by the reporting entity extend the repayment period but might not be a straight-line repayment.)~~ These transactions are, in fact, funding agreements between a reporting entity and a third party, ~~regardless of how the payment to the third party is characterized.~~ The continuance of the stream of payments specified in the levelized commission contract is a mechanism ~~which attempts~~ to bypass recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of the premium payment or the maintenance of the agent's license with the reporting entity is not maintained with respect to the payment stream.

5. The use of an arrangement ~~such as a levelized commission arrangement~~ where commission payments are not linked to traditional elements such as premium payments and policy persistency, but rather are linked to the repayment of an advance amount ~~paid by a third party to the direct selling agents~~ requires the establishment of a liability ~~by the reporting entity~~ for the full amount of the unpaid principal and accrued interest which is payable to a third party related to levelized commissions ~~FN.~~ ~~Arrangements that use a third party to pay agents who write policies for the reporting entity and the insured can be an attempt to de-link the relationship between the insurer and those agents and defer or levelize the acquisition commissions. The insurance reporting entity is required to recognize the full amount of earned commission costs to the direct policy writing agents even if those costs are paid indirectly to the agents by a third party through the use of levelized commission, or similar arrangement, which is in substance a funding arrangement. Having a third party pay commission costs to the selling agent is strong evidence of a potential funding arrangement which shall be recognized as a liability because the substance of the arrangement indicates that repayment is reasonable and probable, even if a contingency has been incorporated into the funding arrangement, unless the underlying policy has been cancelled. A third-party structure cannot recharacterize (e.g. by referencing policy persistency) and delay recognition of liabilities for initial sales commission owed from the writing of policies regardless of how a third-party arrangement is structured with regards to the timing of payment from the insurer. The amount owed for full initial sales commission shall be recognized immediately as the writing of an insurance contract is the event that obligates the insurer, and such action shall occur consistently among insurers. As such, this recognition is required regardless if the insurer owes a selling agent directly or if a third-party has been contracted to provide payment to the selling agent.~~

~~**New Footnote — The guidance in this paragraph notes that levelized commissions which use a third party to pay agents that are linked to traditional elements require establishment of a liability for the amounts that have been paid to the agents and any interest accumulated to date.**~~

Effective Date and Transition

7. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—*Accounting Changes and Corrections of Errors*. The nonsubstantive revisions adopted regarding levelized commission intend are to clarify the original intent of this statement and are effective January 1, 2021. ~~Reporting entities that have not complied with the original intent of the statement shall reflect the change as a correction of an error (as a mistake in the application of an accounting principle) pursuant to SSAP No. 3 in the December 31, 2020 financial statements. In accordance with SSAP No. 3, correction of all accounting errors in previously issued financial statements, for which an amended financial statement was not filed, shall be reported as an adjustment to unassigned funds (surplus) in the period in which the error was detected. Disclosure shall also occur in accordance with SSAP No. 3.~~

On November 12, 2020, the Statutory Accounting Principles (E) Working Group held a hearing to receive comments. The Working Group took the following actions:

- **Re-exposed** the prior version of SSAP #71 with shaded edits reflected below. – (1) the proposed effective date of Jan.1, 2021 was changed to be effective upon adoption, and (2) the revised text made explicit that the proposed revisions will apply to contracts in effect as of the date of adoption. Comments due by Jan. 11, 2021.
- Determined that the revisions to SSAP #71 had met the due process for either a substantive or a non-substantive revision but concluded to keep the revision classified as nonsubstantive. The Working Group reiterated that it is not the impact of a change on an individual entity that determines whether a change is substantive or non-substantive, but whether the revision is in line with the original intent of the SSAP. The Working group noted that this is a clarification of existing guidance consistent with original intent. Commissioner Donelon noted an objection to the classification as non-substantive.
- **Directed NAIC Staff to draft an Issue Paper** to document the discussion on this topic for historical purposes. The issue paper will be exposed for comment before considered for adoption by the Working Group.

Nov. 12, 2020 Exposed shaded SSAP No. 71 revisions are new from prior exposure.

2. **Acquisition costs are those costs that are incurred in the acquisition of new and renewal insurance contracts and include those costs that vary with and are primarily related to the acquisition of insurance contracts (e.g., agent and broker commissions, certain underwriting and policy issue costs, and medical and inspection fees). Acquisition costs and commissions shall be expensed as incurred. Determination of when acquisition costs and commissions have been incurred shall be made in accordance with SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets.**

3. Contingent commission liabilities shall be determined in accordance with the terms of each individual commission agreement. Commission liabilities determined on the basis of a formula that relates to loss experience shall be established for the earned portion. Assumptions used to calculate the contingent commission liability shall be consistent with the terms of the policy contract and with the assumptions made in recording other assets and liabilities necessary to reflect underwriting results of the reporting entity such as retrospective premium adjustments and loss reserves, including incurred but not reported.

4. **Levelized commissions occur in situations where agents receive normal (non-level) commissions with payments made by a third party. It is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid (with interest explicit or implied) to the third party by levelized payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the reporting entity. (Note: levelized repayments made by the reporting entity extend the repayment period but might not be a straight-line repayment.) These transactions are, in fact, funding agreements between a reporting entity and a third party, regardless of**

how the payment to the third party is characterized. The continuance of the stream of payments specified in the levelized commission contract is a mechanism which attempts to bypass recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of the premium payment or the maintenance of the agent's license with the reporting entity is not maintained with respect to the payment stream.

5. The use of an arrangement such as a levelized commission arrangement where commission payments are not linked to traditional elements such as premium payments and policy persistency, but rather are linked to the repayment of an advance amount paid by a third party to the direct selling agents requires the establishment of a liability by the reporting entity for the full amount of the unpaid principal and accrued interest which is payable to a third party related to levelized commissions ^{FN}. Arrangements that use a third party to pay agents who write policies for the reporting entity and the insured can be an attempt to de-link the relationship between the insurer and those agents and defer or levelize the acquisition commissions. The insurance reporting entity is required to recognize the full amount of earned commission costs to the direct policy writing agents even if those costs are paid indirectly to the agents by a third party through the use of levelized commission, or similar arrangement, which is in substance a funding arrangement. Having a third party pay commission costs to the selling agent is strong evidence of a potential funding arrangement which shall be recognized as a liability because the substance of the arrangement indicates that repayment is reasonable and probable, even if a contingency has been incorporated into the funding arrangement, until unless the underlying policy has been cancelled. A third-party structure cannot recharacterize (e.g. by referencing policy persistency) and delay recognition of liabilities for initial sales commission owed from the writing of policies regardless of how a third-party arrangement is structured with regards to the timing of payment from the insurer. The amount owed for full initial sales commission shall be recognized immediately as the writing of an insurance contract is the event that obligates the insurer, and such action shall occur consistently among insurers. As such, this recognition is required regardless if the insurer owes a selling agent directly or if a third-party has been contracted to provide payment to the selling agent.

Effective Date and Transition

7. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3— *Accounting Changes and Corrections of Errors*. The nonsubstantive revisions adopted TBD date regarding levelized commission are to clarify the original intent of this statement and apply to existing contracts are effective in effect on the date of adoption of the revisions January 1, 2021.

For Spring 2021 discussion, NAIC staff recommends that the Working Group take the following actions:

1. **Expose the issue paper to document the historical discussion.**
2. **Adopt the exposed revisions to SSAP No. 71 after discussion regarding whether to incorporate the revisions to paragraph 7 regarding the effective date** which is illustrated as shaded text below. The November 2020 exposure was for the revisions to be effective on adoption. This is because some members noted a preference for an early as possible effective date in 2021. Guggenheim and IPs comments requested an effective date no sooner than December 31, 2021 to allow time to work with regulators, auditors etc.

In the event that the Working Group wants to consider the industry request, NAIC staff has provided language for a December 31, 2021 effective date as illustrated below. As the issue paper is to document the historical discussion there is not a need to delay the effective date for an issue paper that is not authoritative. A December 31, 2021 effective date would allow the issue paper to be adopted prior to the implementation of the revisions. Note that under SSAP No. 3, the impacts are still calculated using Jan. 1 numbers, but would not be initially reported until the year-end 2021 financial statements.

Effective Date and Transition (shaded revisions to paragraph 7 are for discussion).

7. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with SSAP No. 3—*Accounting Changes and Corrections of Errors*. The nonsubstantive revisions adopted TBD date regarding leveled commission are to clarify the original intent of this statement and apply to existing contracts in effect as of December 31, 2021 and new contracts thereafter on the date of adoption of the.

3. **Note – It is recommended that the Working Group expose a blanks proposal (2021-04BWG, see attachment 20.1) to incorporate a new general interrogatory to assist with identifying the use of funding agreements** as a concurrent exposure with the Blanks (E) Working Group. This general interrogatory will require the identification of circumstances of when an insurer utilizes third parties to pay agent commissions in which the advances paid by the 3rd party are not settled in full within 90 days. The 90-day threshold for reporting was selected to not require reporting when an insurer a third-party for traditional payment processing. This proposal is attached at 20.1 and was developed with Working Group member input. (*Staff Note: Input from interested parties is requested to ensure that this GI is written to capture the desired information on companies using financing arrangements to pay commissions.*)

SSAP No. 71 Nov. 12, 2020 exposure with shaded revisions to paragraph 7 for Spring 2021 discussion

2. Acquisition costs are those costs that are incurred in the acquisition of new and renewal insurance contracts and include those costs that vary with and are primarily related to the acquisition of insurance contracts (e.g., agent and broker commissions, certain underwriting and policy issue costs, and medical and inspection fees). Acquisition costs and commissions shall be expensed as incurred. Determination of when acquisition costs and commissions have been incurred shall be made in accordance with SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets.
3. Contingent commission liabilities shall be determined in accordance with the terms of each individual commission agreement. Commission liabilities determined on the basis of a formula that relates to loss experience shall be established for the earned portion. Assumptions used to calculate the contingent commission liability shall be consistent with the terms of the policy contract and with the assumptions made in recording other assets and liabilities necessary to reflect underwriting results of the reporting entity such as retrospective premium adjustments and loss reserves, including incurred but not reported.

4. Levelized commissions occur in situations where agents receive normal (non-level) commissions with payments made by a third party. It is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid (with interest explicit or implied) to the third party by levelized payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the reporting entity. (Note: levelized repayments made by the reporting entity extend the repayment period but might not be a straight-line repayment.) These transactions are, in fact, funding agreements between a reporting entity and a third party, regardless of how the payment to the third party is characterized. The continuance of the stream of payments specified in the levelized commission contract is a mechanism which attempts to bypass recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of the premium payment or the maintenance of the agent's license with the reporting entity is not maintained with respect to the payment stream.

5. The use of an arrangement such as a levelized commission arrangement where commission payments are not linked to traditional elements such as premium payments and policy persistency, but rather are linked to the repayment of an advance amount paid by a third party to the direct selling agents requires the establishment of a liability by the reporting entity for the full amount of the unpaid principal and accrued interest which is payable to a third party related to levelized commissions ^{EN}. Arrangements that use a third party to pay agents who write policies for the reporting entity and the insured can be an attempt to de-link the relationship between the insurer and those agents and defer or levelize the acquisition commissions. The insurance reporting entity is required to recognize the full amount of earned commission costs to the direct policy writing agents even if those costs are paid indirectly to the agents by a third party through the use of levelized commission, or similar arrangement, which is in substance a funding arrangement. Having a third party pay commission costs to the selling agent is strong evidence of a potential funding arrangement which shall be recognized as a liability because the substance of the arrangement indicates that repayment is reasonable and probable, even if a contingency has been incorporated into the funding arrangement, until the underlying policy has been cancelled. A third-party structure cannot recharacterize (e.g. by referencing policy persistency) and delay recognition of liabilities for initial sales commission owed from the writing of policies regardless of how a third-party arrangement is structured with regards to the timing of payment from the insurer. The amount owed for full initial sales commission shall be recognized immediately as the writing of an insurance contract is the event that obligates the insurer, and such action shall occur consistently among insurers. As such, this recognition is required regardless of if the insurer owes a selling agent directly or if a third-party has been contracted to provide payment to the selling agent.

Effective Date and Transition

7. This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. The nonsubstantive revisions adopted TBD date regarding levelized commission are to clarify the original intent of this statement and apply to existing contracts in effect as of December 31, 2021 and new contracts thereafter, on the date of adoption of the

On March 15, 2021, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions to *SSAP No. 71—Policy Acquisition Costs and Commissions*, as illustrated below, to clarify the guidance regarding levelized commissions with a Dec. 31, 2021 effective date. The Working Group affirmed the nonsubstantive classification of these revisions as consistent with the original intent of SSAP No. 71 with a separate vote. In addition, the Working Group exposed a blanks proposal which incorporates a new general interrogatory to identify certain situations where an insurer utilizes a third-party for the payment of commission expenses. The blanks proposal will be concurrently exposed with the Blanks (E) Working Group exposure.

Adopted Revisions to SSAP No. 71 (new text from the prior exposure is shown as shaded):

2. Acquisition costs are those costs that are incurred in the acquisition of new and renewal insurance contracts and include those costs that vary with and are primarily related to the acquisition of insurance contracts (e.g., agent and broker commissions, certain underwriting and policy issue costs, and medical and inspection fees). Acquisition costs and commissions shall be expensed as incurred. Determination of when

acquisition costs and commissions have been incurred shall be made in accordance with SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets.

3. Contingent commission liabilities shall be determined in accordance with the terms of each individual commission agreement. Commission liabilities determined on the basis of a formula that relates to loss experience shall be established for the earned portion. Assumptions used to calculate the contingent commission liability shall be consistent with the terms of the policy contract and with the assumptions made in recording other assets and liabilities necessary to reflect underwriting results of the reporting entity such as retrospective premium adjustments and loss reserves, including incurred but not reported.

4. Levelized commissions occur in situations where agents receive normal (non-level) commissions with payments made by a third party. It is intended, but not necessarily guaranteed, that the amounts paid to the agents by the third party would ultimately be repaid (with interest explicit or implied) to the third party by levelized payments (which are less than the normal first year commissions but exceed the normal renewal commissions) from the reporting entity. (Note: levelized repayments made by the reporting entity extend the repayment period but might not be a straight-line repayment.) These transactions are, in fact, funding agreements between a reporting entity and a third party, [regardless of how the payment to the third party is characterized](#). The continuance of the stream of payments specified in the levelized commission contract is a mechanism [which attempts](#) to bypass recognition of those expenses which are ordinarily charged to expense in the first year of the contract. Consequently, the normal link between the persistency of the policy, the continuance of the premium payment or the maintenance of the agent's license with the reporting entity is not maintained with respect to the payment stream.

5. The use of an arrangement [such as a levelized commission arrangement](#) where commission payments are not linked to traditional elements such as premium payments and policy persistency, but rather are linked to the repayment of an advance amount [paid by a third party to the direct selling agents](#) requires the establishment of a liability [by the reporting entity](#) for the full amount of the unpaid principal and accrued interest which is payable to a third party related to levelized commissions. [Arrangements that use a third party to pay agents who write policies for the reporting entity and the insured can be an attempt to de-link the relationship between the insurer and those agents and defer or levelize the acquisition commissions. Issue: Related Parties, Disclaimers of Affiliation and Variable Interest Entities

Check (applicable entity):

	P/C	Life	Health
Modification of existing SSAP	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Description of Issue:

The intent of this agenda item is to clarify identification of related parties and affiliates in *SSAP No. 25—Affiliates and Other Related Parties* and to incorporate new disclosures to ensure regulators have the full picture of complicated business structures.

The proposed SSAP revisions intend to address the following key aspects:

- Clarify the identification of related parties and ensure that any related party identified under U.S. generally accepted accounting principles (GAAP) or Securities Exchange Commission (SEC) reporting requirements would be considered a related party under statutory accounting principles (SAP).
- Clarify that non-controlling ownership over 10% results in a related party classification regardless of any disclaimer of control or disclaimer of affiliation.
- Clarify the impact of a disclaimer of control or disclaimer of affiliate under SAP. As detailed, such disclaimers impact holding company group allocation and reporting as an SCA under SSAP No. 97, but do not eliminate the classification as a “related party” and the disclosure of material transactions as required under SSAP No. 25.
- Proposes rejection of several U.S. GAAP standards addressing variable interest entities.

NAIC staff noted that the requirements for the SEC filings do not allow for a disclaimer of affiliation, as is allowed in the *Insurance Holding Company System Regulatory Act* (#440) and the *Insurance Holding Company System Model Regulation* (#450) and included in Appendix A-440. As a result, the statutory financial statements do not provide the full picture of some complicated business structures, which can be common among insurance companies. This agenda item intends to propose revisions to have the related party and affiliate reporting more closely match that of SEC filings. This will be done by adding language from SEC laws and regulation and clarifying the disclaimer of affiliation or control from a statutory reporting standpoint.

Additionally, this agenda item addresses the FASB Accounting Standards Updates (ASU) related to Variable Interest Entities (VIE) and Consolidation (Topic 810).

FASB defines a VIE as an entity (the investee) in which the investor holds a controlling interest that is not based on the majority of voting rights. This agenda item discusses several ASUs that established the initial guidance for VIEs and all subsequent ASUs to update and clarify this guidance. As a fundamental issue, the concept of consolidation has been rejected for statutory accounting. As such, the main concepts included in the ASUs that are discussed in this agenda item are proposed to be rejected for statutory accounting. While this agenda item is not intended to change the concept of consolidation for statutory accounting, NAIC staff believe that there is a need and justification for enhanced disclosures to supplement the reporting

process of related parties and affiliates within a company structure. The proposed additions will ensure state insurance regulators have a full picture of the companies that they are regulating.

A brief description of the ASUs that are addressed in this agenda item are included below:

- *ASU 2009-17, Consolidations (Topic 810)—Improvements to Financial Reporting by Enterprises Involved with Variable Interest Entities* clarifies and establishes the basis of U.S. GAAP accounting for consolidation and VIEs. This ASU is a result of *FASB Statement No. 167, Amendments to FASB Interpretation No. 46(R)*.
- *ASU 2010-02, Consolidation (Topic 810)—Accounting and Reporting for Decreases in Ownership of a Subsidiary—a Scope Clarification* addresses implementation issues related to the changes in ownership provisions in Subtopic 810-10, originally issued as *FASB Statement No. 160, Noncontrolling Interests in Consolidated Financial Statements*, which establishes the accounting and reporting guidance for noncontrolling interests and changes in ownership interests of a subsidiary.
- *ASU 2010-10, Consolidations (Topic 810)—Amendments for Certain Investment Funds* defers consolidation requirements for a reporting entity's interest in an entity that has all the attributes of an investment company or for which it is industry practice to apply measurement principles for financial reporting purposes that are consistent with those followed by investment companies.
- *ASU 2014-07, Consolidation (Topic 810)—Applying Variable Interest Entities Guidance to Common Control Leasing Arrangements* permits a private company lessee (the reporting entity) to elect an alternative not to apply VIE guidance to a lessor entity in certain situations.
- *ASU 2015-02, Consolidation (Topic 810)—Amendments to the Consolidation Analysis* includes updates to limited partnerships and similar legal entities, evaluating fees paid to a decision maker or a service provider as a variable interest, the effect of fee arrangements on the primary beneficiary determination, the effect of related parties on the primary beneficiary determination, and certain investment funds.
- *ASU 2016-17, Consolidation (Topic 810)—Interests Held through Related Parties That Are under Common Control* provides that if a reporting entity satisfies the first characteristic of a primary beneficiary (such that it is the single decision maker of a VIE), these amendments require that reporting entity, in determining whether it satisfies the second characteristic of a primary beneficiary, to include all of its direct variable interests in a VIE and, on a proportionate basis, its indirect variable interests in a VIE held through related parties, including related parties that are under common control with the reporting entity.
- *ASU 2018-17, Consolidation (Topic 810)—Targeted Improvements to Related Party Guidance for Variable Interest Entities* includes updated VIE guidance for private companies and considers if indirect interests held through related parties under common control for determining whether fees paid to decision makers and service providers are variable interests.

Existing Authoritative Literature: Statutory accounting guidance is in *SSAP No. 25—Affiliates and Other Related Parties*, model law and regulation provisions are included in *Insurance Holding Company System Regulatory Act (#440)* and the *Insurance Holding Company System Model Regulation (#450)*.

From Model #440

Section 4. Registration of Insurers

- K. Disclaimer. Any person may file with the commissioner a disclaimer of affiliation with any authorized insurer or a disclaimer may be filed by the insurer or any member of an insurance holding company system. The disclaimer shall fully disclose all material relationships and bases for affiliation between the person and the insurer as well as the basis for disclaiming the affiliation. A disclaimer of affiliation shall be deemed to have been granted unless the commissioner, within thirty (30) days following receipt of a complete disclaimer, notifies the filing party the disclaimer is disallowed. In the event of disallowance,

the disclaiming party may request an administrative hearing, which shall be granted. The disclaiming party shall be relieved of its duty to register under this section if approval of the disclaimer has been granted by the commissioner, or if the disclaimer is deemed to have been approved.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): In 2010, in response to the issuance of *FAS 166, Accounting for Transfers of Financial Assets—an amendment of FASB Statement No. 140* and *FAS 167, Amendments to FASB Interpretation No. 46(R)*, the SAPWG formed the “SAPWG FAS 166/167 Subgroup. FAS 167 was issued in June 2009 and revised the scope of the FASB consolidation guidance to ensure that entities previously considered qualifying special purpose entities were included within the GAAP consolidation. Additionally, FAS 167 requires consolidation for entities (variable interest entities) in which the reporting entity has the “controlling financial interest”. Those situations are specific to when the entity is not controlled by contract, but the reporting entity has: (1) the power to direct the activities of the entity that most significantly impact the entity’s economic performance; and (2) the obligation to absorb losses or receive benefits of the entity that could be potentially significant to the entity. Although the concept of consolidation was not supported for SAP, the Subgroup discussion was focused on considering new disclosures for variable interest entities. The discussion of this Subgroup was deferred as Agenda Item 2011-16, Definition of a Related Party in SSAP No. 25 was considering changes to clarify the relationships that should be considered related parties. Discussion on this agenda item was halted in 2012 and 2015 as FASB issued new ASUs pertaining to VIEs. With the issuance of this new agenda item (2019-34), it is recommended that the 2011 agenda item be disposed.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): None.

Staff Recommendation:

NAIC Staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose revisions to *SSAP No. 25—Affiliates and Other Related Parties*, to clarify the types of entities or persons that are included as related parties, to clarify that a non-controlling ownership interest greater than 10% is a related party and is subject to the related party disclosures, to clarify the guidance for disclaimers of affiliation and control for statutory accounting, to clarify that the reporting entity must disclose if they knowingly engaged in any non-arms-length transactions with any entity, individual or company that has not been previously identified as a related party and to reject the seven *FASB Accounting Standards Updates* listed in the agenda item as not applicable for statutory accounting in SSAP No. 25.

Staff Review Completed by:

Jake Stultz, NAIC Staff – November 2019

Status:

On December 7, 2019, the Statutory Accounting Principles (E) Working Group moved this agenda item to the active listing, categorized as nonsubstantive, and exposed revisions to *SSAP No. 25—Affiliates and Other Related Parties*, to clarify the following:

- The types of entities or persons that are included as related parties;
- That a non-controlling ownership interest greater than 10% is a related party and is subject to the related party disclosures; and
- The guidance for disclaimers of affiliation and control for statutory accounting.

This agenda item also rejects seven FASB Accounting Standards Updates, listed above, for statutory accounting. With exposure, an intent is included to dispose of agenda item 2011-16: Definition of Related Party, which is a historical item drafted to consider the SSAP No. 25 definition. The Working Group also directed notice of the exposure to be sent to the Group Solvency Issues (E) Working Group.

On March 18, 2020, the Statutory Accounting Principles (E) Working Group deferred discussion of this item for a subsequent call or meeting.

Summer 2020:

Pursuant to the direction received Dec. 7, 2019, NAIC staff has drafted nonsubstantive revisions to SSAP No. 25. The current version is shown as tracked changes to SSAP No. 25 is attached as an exhibit to this agenda item. The updated draft revisions to SSAP No. 25 are discussed below.

- Based on the comments from the Group Solvency Issues (E) Working Group, NAIC staff have added a new disclosure that provides information on minority ownership interests, as well as significant relationships between minority owners and other U.S. domestic insurers/groups. This new disclosure is not intended to include passive fund owners, such as ETFs and mutual funds. This is in paragraph 22 in the exhibit to this agenda item.
- NAIC staff have removed the direct references to U.S. GAAP and SEC guidance that was included in the initial draft revisions. It was not intended to incorporate by reference the guidance from these sources but was instead intended to show that the revisions were going to be more consistent with the U.S. GAAP and SEC guidance. The language that was added to the description of related parties in paragraph 4 in the original expose draft are all language from either U.S. GAAP or from laws and regulations related to the SEC.
- With the proposed rejection of the U.S. GAAP VIE guidance for statutory accounting, our intention is to rely on SSAP No. 25, including the proposed revisions, to capture related parties for reporting. These updates are not intended to change reporting in Schedule BA or Schedule D for any investments.

On July 30, 2020, the Statutory Accounting Principles (E) Working Group exposed this agenda item, with revisions as detailed above under “Summer 2020.”

On November 12, 2020, the Statutory Accounting Principles (E) Working Group exposed this agenda item, with detailed revisions to SSAP No. 25, as detailed below under “November 12, 2020.”

November 12, 2020:

The proposed SSAP revisions intend to address the following key aspects:

- Clarify the identification of related parties and ensure that any related party identified under U.S. GAAP or SEC reporting requirements would be considered a related party under statutory accounting principles.
- Clarify that non-controlling ownership over 10% results in a related party classification regardless of any disclaimer of control or disclaimer of affiliation.
- Clarify the impact of a disclaimer of control or disclaimer of affiliate under SAP. As detailed, such disclaimers impact holding company group allocation and reporting as an SCA under SSAP No. 97, but do not eliminate the classification as a “related party” and the disclosure of material transactions as required under SSAP No. 25.
- Proposes rejection of several U.S. GAAP standards addressing variable interest entities.

On March 15, 2021, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions, with modifications to add “direct or indirect” to paragraphs 4f, 7d, and 8 as discussed during the meeting, to *SSAP No. 25—Affiliates and Other Related Parties* to address the following key aspects:

- Clarify the identification of related parties and ensure that any related party identified under U.S. GAAP or SEC reporting requirements would be considered a related party under statutory accounting principles.
- Clarify that non-controlling ownership over 10% results in a related party classification regardless of any disclaimer of control or disclaimer of affiliation.
- Clarify the impact of a disclaimer of control or disclaimer of affiliate under SAP. As detailed, such disclaimers impact holding company group allocation and reporting as an SCA under SSAP No. 97, but do not eliminate the classification as a “related party” and the disclosure of material transactions as required under SSAP No. 25.
- Proposes rejection of several U.S. GAAP standards addressing variable interest entities.

The detailed revisions to *SSAP No. 25—Affiliates and Other Related Parties* are detailed below.

SCOPE OF STATEMENT

1. Related party transactions are subject to abuse because reporting entities may be induced to enter transactions that may not reflect economic realities or may not be fair and reasonable to the reporting entity or its policyholders. As such, related party transactions require specialized accounting rules and increased regulatory scrutiny. This statement establishes statutory accounting principles and disclosure requirements for related party transactions.

2. This statement shall be followed for all related party transactions, [including transactions with parties that own 10% or more of the reporting entity](#),—even if the transaction is also governed by other statutory accounting principles. Furthermore, this statement shall be followed in all transactions which involve unrelated parties as intermediaries between related parties. In determining whether a transaction is a related party transaction, consideration shall be given to the substance of the agreement and the parties whose actions or performance materially impact the insurance reporting entity under the transaction. For example, an investment acquired from a non-related intermediary in which the investment return is predominantly contingent on the performance of a related party shall be considered a related party

investment. As a general principle, it is erroneous to conclude that the mere inclusion of a non-related intermediary eliminates the requirement to assess and properly identify the related party transaction in accordance with the provisions of this statement. It is also erroneous to conclude that the presence of non-related assets in a structure predominantly comprised of related party investments eliminates the requirement to assess and identify the investment transaction as a related party arrangement.

3. If a company receives the stock of an affiliated company as a capital contribution rather than through a purchase, the transaction shall be accounted for according to *SSAP No. 25—Affiliates and Other Related Parties*, *SSAP No. 95—Nonmonetary Transactions*, or *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities*, based on the details of each transaction. The statutory purchase method within *SSAP No. 68—Business Combinations* is not applicable for stock received as a capital contribution.

SUMMARY CONCLUSION

4. Related parties are defined as entities that have common interests as a result of ownership, control, affiliation or by contract. Related parties shall include but are not limited to the following:

- a. Affiliates of the reporting entity, as defined in paragraph 5;
- b. Trusts for the benefit of employees, such as pension and profit-sharing trusts and Employee Stock Ownership Plans that are managed by or under the trusteeship of management of the reporting entity, its parent or affiliates;
- c. The principal owners, directors, officers of the reporting entity;
- d. Any immediate family member of a principal owner, director or executive officer of the reporting entity, which means any child, stepchild, parent, stepparent, spouse, sibling, mother-in-law, father-in-law, son-in-law, daughter-in-law, brother-in-law, or sister-in-law, or individual related by blood or marriage whose close association is equivalent to a family relationship of such director, executive officer or nominee for director, or any person (other than a tenant or employee) sharing the household of such director, executive officer or nominee for director;
- e. Companies and entities which share common control, such as principal owners, directors, or officers, including situations where a principal owners, directors, or officers have a controlling stake in another reporting entity;
- f. Any direct or indirect ownership greater than 10% of the reporting entity results in a related party classification regardless of any disclaimer of control or disclaimer of affiliation.
- g. The management of the reporting entity, its parent or affiliates (including directors);
- h. Members of the immediate families of principal owners and management of the reporting entity, its parent or affiliates and their management;
- i. Parties with which the reporting entity may deal if either party directly or indirectly controls or can significantly influence the management or operating policies of the other to an extent that one of the transacting parties might be prevented from fully pursuing its own separate interest;
- j. A party which can, directly or indirectly, significantly influence the management or operating policies of the reporting entity, which may include a provider who is contracting

with the reporting entity. This is not intended to suggest that all provider contracts create related party relationships;

~~h~~.~~k~~. A party which has an ownership interest in one of the transacting parties and can significantly influence the other to an extent that one or more of the transacting parties might be prevented from fully pursuing its own separate interests;

~~i~~.~~l~~. Attorney-in-fact of a reciprocal reporting entity or any affiliate of the attorney-in-fact; and

~~j~~.~~m~~. A U.S. manager of a U.S. Branch or any affiliate of the U.S. manager of a U.S. Branch.

5. An affiliate is defined as an entity that is within the holding company system or a party that, directly or indirectly, through one or more intermediaries, controls, is controlled by, or is under common control with the reporting entity. An affiliate includes a parent or subsidiary and may also include partnerships, joint ventures, and limited liability companies as defined in *SSAP No. 48—Joint Ventures, Partnerships and Limited Liability Companies*. Those entities are accounted for under the guidance provided in *SSAP No. 48*, which requires an equity method for all such investments. An affiliate is any person that is directly or indirectly, owned or controlled by the same person or by the same group of persons, that, directly or indirectly, own or control the reporting entity.

6. Control is defined as the possession, directly or indirectly, of the power to direct or cause the direction of the management and policies of the investee, whether through the (a) ownership of voting securities, (b) by contract other than a commercial contract for goods or nonmanagement services, (c) by contract for goods or nonmanagement services where the volume of activity results in a reliance relationship (d) by common management, or (e) otherwise. Control shall be presumed to exist if a reporting entity and its affiliates directly or indirectly, own, control, hold with the power to vote, or hold proxies representing 10% or more of the voting interests of the entity.

7. Control as defined in paragraph 6 shall be measured at the holding company level. For example, if one member of an affiliated group has a 5% interest in an entity and a second member of the group has an 8% interest in the same entity, the total interest is 13%, and therefore, each member of the affiliated group shall be presumed to have control. This presumption will stand until rebutted by an evaluation of all the facts and circumstances relating to the investment based on the criteria in *FASB Interpretation No. 35, Criteria for Applying the Equity Method of Accounting for Investments in Common Stock, an Interpretation of APB Opinion No. 18*. The corollary is required to demonstrate control when a reporting entity owns less than 10% of the voting securities of an investee. The insurer shall maintain documents substantiating its determination for review by the domiciliary commissioner. Examples of situations where the presumption of control may be in doubt include the following:

- a. Any limited partner investment in a limited partnership, unless the limited partner is affiliated with the general partner.
- b. An entity where the insurer owns less than 50% of an entity and there is an unaffiliated individual or group of investors who own a controlling interest.
- c. An entity where the insurer has given up participation rights¹ as a shareholder to the investee.

¹ The term "participating rights" refers to the type of rights that allows an investor to effectively participate in significant decisions related to an investee's ordinary course of business and is distinguished from the more limited type of rights referred to as "protective rights". Refer to the sections entitled: "Protective Rights" and "Substantive Participating Rights" in EITF 96-16, *Investor's Accounting for an Investee When the Investor Owns a Majority of the Voting Stock but the Minority Shareholder or Shareholders Have Certain Approval or Veto Rights*. The term "participating rights" shall be used consistent with the discussion of substantive participating rights in this EITF.

d. Agreements where direct or indirect non-controlling ownership interest is less than 10% where the parties have structured the arrangement in this structure to avoid the 10% threshold in paragraph 4.f. and paragraph 8.

8. Any direct or indirect ownership interest of the reporting entity greater than 10% results in a related party classification regardless of any disclaimer of control or disclaimer of affiliation. The *Insurance Holding Company System Regulatory Act* (#440) and the *Insurance Holding Company System Model Regulation* (#450) include a provision that allows for the disclaimer of affiliation and/or the disclaimer of control for members of an insurance holding company system. The disclaimer must be filed with the state insurance commissioner. Entities whose relationship is subject to a disclaimer of affiliation or a disclaimer of control are related parties and are subject to the related party disclosures within this statement. Such a disclaimer does not eliminate a “related party” distinction or disclosure requirements for material transactions pursuant to SSAP No. 25.

~~8.9.~~ Transactions between related parties must be in the form of a written agreement. The written agreement must provide for timely settlement of amounts owed, with a specified due date. Amounts owed to the reporting entity over ninety days from the written agreement due date shall be nonadmitted, except to the extent this is specifically addressed by other statements of statutory accounting principles (SSAPs). If the due date is not addressed by the written agreement, any uncollected receivable is nonadmitted.

Related Party Loans

~~9.10.~~ Loans or advances (including debt, public or private) made by a reporting entity to its parent or principal owner shall be admitted if approval for the transaction has been obtained from the domiciliary commissioner and the loan or advance is determined to be collectible based on the parent or principal owner’s independent payment ability. An affiliate’s ability to pay shall be determined after consideration of the liquid assets or revenues available from external sources (i.e., determination shall not include dividend paying ability of the subsidiary making the loan or advance) which are available to repay the balance and/or maintain its account on a current basis. Evaluation of the collectibility of loans or advances shall be made periodically. If, in accordance with *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets*, it is probable the balance is uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made. Pursuant to *SSAP No. 72—Surplus and Quasi-Reorganization*, forgiveness by a reporting entity of any debt, surplus note or other obligation of its parent or other stockholder shall be accounted for as a dividend.

~~10.11.~~ Loans or advances by a reporting entity to all other related parties shall be evaluated by management and nonadmitted if they do not constitute arm’s-length transactions as defined in paragraph ~~1413~~. Loans or advances made by a reporting entity to related parties (other than its parent or principal owner) that are economic transactions as defined in paragraph ~~1413~~ shall be admitted. This includes financing arrangements with providers of health care services with whom the reporting entity contracts with from time to time. Such arrangements can include both loans and advances to these providers. Evaluation of the collectibility of loans or advances shall be made periodically. If, in accordance with *SSAP No. 5R*, it is probable the balance is uncollectible, any uncollectible receivable shall be written off and charged to income in the period the determination is made.

~~11.12.~~ Any advances under capitation arrangements made directly to providers, or to intermediaries that represent providers, that exceed one month’s payment shall be nonadmitted assets.

~~12.13.~~ Indirect loans are loans or extensions of credit to any person who is not an affiliate, where the reporting entity makes loans or extensions of credit with the agreement or understanding that the proceeds of the transactions, in whole or in substantial part, are to be used to make loans or extensions of credit to, to purchase assets of, or to make investments in, any affiliate of the reporting entity making the loans or

extensions of credit. The admissibility of indirect loans made by a reporting entity for the benefit of its parent or principal owner shall be determined in accordance with the guidelines in paragraph ~~109~~. Indirect loans or advances made for the benefit of all other related parties shall be evaluated and accounted for consistent with loans or advances to related parties as described in paragraph ~~1110~~ and paragraph ~~1211~~.

Transactions Involving the Exchange of Assets or Liabilities

~~13,14~~. An arm's-length transaction is defined as a transaction in which willing parties, each being reasonably aware of all relevant facts and neither under compulsion to buy, sell, or loan, would be willing to participate. A transaction between related parties involving the exchange of assets or liabilities shall be designated as either an economic transaction or non-economic transaction. An economic transaction is defined as an arm's-length transaction which results in the transfer of the risks and rewards of ownership and represents a consummated act thereof, i.e., "permanence." The appearance of permanence is also an important criterion in assessing the economic substance of a transaction. In order for a transaction to have economic substance and thus warrant revenue (loss) recognition, it must appear unlikely to be reversed. If subsequent events or transactions reverse the effect of an earlier transaction prior to the issuance of the financial statements, the reversal shall be considered in determining whether economic substance existed in the case of the original transaction. Subsequent events are addressed in *SSAP No. 9—Subsequent Events*. An economic transaction must represent a bonafide business purpose demonstrable in measurable terms. A transaction which results in the mere inflation of surplus without any other demonstrable and measurable betterment is not an economic transaction. The statutory accounting shall follow the substance, not the form of the transaction.

~~14,15~~. In determining whether there has been a transfer of the risks and rewards of ownership in the transfer of assets or liabilities between related parties, the following—and any other relevant facts and circumstances related to the transaction—shall be considered:

- a. Whether the seller has a continuing involvement in the transaction or in the financial interest transferred, such as through the exercise of managerial authority to a degree usually associated with ownership;
- b. Whether there is an absence of significant financial investment by the buyer in the financial interest transferred, as evidenced, for example, by a token down payment or by a concurrent loan to the buyer;
- c. Whether repayment of debt that constitutes the principal consideration in the transaction is dependent on the generation of sufficient funds from the asset transferred;
- d. Whether limitations or restrictions exist on the buyer's use of the financial interest transferred or on the profits arising from it;
- e. Whether there is retention of effective control of the financial interest by the seller.

~~15,16~~. A transaction between related parties may meet the criteria for treatment as an economic transaction at one level of financial reporting, but may not meet such criteria at another level of financial reporting. An example of such a transaction is a reporting entity purchasing securities at fair value from an affiliated reporting entity that carried the securities at amortized cost. This transaction meets the criteria of an economic transaction at this level of financial reporting, and therefore, the selling reporting entity would record a gain and the acquiring reporting entity would record the securities at their cost (fair value on the transaction date). At the common parent level of reporting, this transaction has resulted in the mere inflation of surplus, and therefore, is a non-economic transaction. The parent reporting entity shall defer the net effects of any gain or increase in surplus resulting from such transactions by recording a deferred gain and an unrealized loss. The deferred gain shall not be recognized by the parent reporting entity unless and until arms-length transaction(s) with independent third parties give rise to appropriate recognition of the gain.

~~16.~~17. A non-economic transaction is defined as any transaction that does not meet the criteria of an economic transaction. Similar to the situation described in paragraph ~~16~~15, transfers of assets from a parent reporting entity to a subsidiary, controlled or affiliated entity shall be treated as non-economic transactions at the parent reporting level because the parent has continuing indirect involvement in the assets.

~~17.~~18. When accounting for a specific transaction, reporting entities shall use the following valuation methods:

- a. Economic transactions between related parties shall be recorded at fair value at the date of the transaction. To the extent that the related parties are affiliates under common control, the controlling reporting entity shall defer the effects of such transactions that result in gains or increases in surplus (see paragraph ~~16~~15);
- b. Non-economic transactions between reporting entities, which meet the definition of related parties above, shall be recorded at the lower of existing book values or fair values at the date of the transaction;
- c. Non-economic transactions between a reporting entity and an entity that has no significant ongoing operations other than to hold assets that are primarily for the direct or indirect benefit or use of the reporting entity or ~~its~~sits affiliates, shall be recorded at the fair value at the date of the transaction; however, to the extent that the transaction results in a gain, that gain shall be deferred until such time as permanence can be verified;
- d. Transactions which are designed to avoid statutory accounting practices shall be reported as if the reporting entity continued to own the assets or to be obligated for a liability directly instead of through a subsidiary.

Examples of transactions deemed to be non-economic include security swaps of similar issues between or among affiliated companies, and swaps of dissimilar issues accompanied by exchanges of liabilities between or among affiliates.

Transactions Involving Services

~~18.~~19. Transactions involving services between related parties can take a variety of different forms. One of the significant factors as to whether these transactions will be deemed to be arm's length is the amount charged for such services. In general, amounts charged for services are based either on current market rates or on allocations of costs. Determining market rates for services is difficult because the circumstances surrounding each transaction are unique. Unlike transactions involving the exchange of assets and liabilities between related parties, transactions for services create income on one party's books and expense on the second party's books, and therefore, do not lend themselves to the mere inflation of surplus. These arrangements are generally subject to regulatory approval.

~~19.~~20. Transactions involving services provided between related parties shall be recorded at the amount charged². Regulatory scrutiny of related party transactions where amounts charged for services do not meet the fair and reasonable standard established by Appendix A-440, may result in (a) amounts charged being recharacterized as dividends or capital contributions, (b) transactions being reversed, (c) receivable balances being nonadmitted, or (d) other regulatory action. Expenses that result from cost allocations shall

² The amount charged shall be reviewed when there are any modifications or waivers subsequent to the establishment of the contract terms. If waivers or modifications to amounts charged occur, the related party transaction shall be reassessed to determine whether the contract continues to reflect fair and reasonable standards. If the transaction was with a parent or other stockholder and the charge for services has been fully waived, then the guidance in SSAP No. 72 for recognition as contributed capital (forgiveness of reporting entity obligation) or as a dividend (forgiveness of amount owed to the reporting entity) shall apply.

be allocated subject to the same fair and reasonable standards, and the books and records of each party shall disclose clearly and accurately the precise nature and details of the transaction. See *SSAP No 70—Allocation of Expenses* for additional discussion regarding the allocation of expenses.

Disclosures

~~20.~~21. The financial statements shall include disclosures of all material related party transactions, including transactions with the ownership interests identified in paragraph 22. In some cases, aggregation of similar transactions may be appropriate. Sometimes, the effect of the relationship between the parties may be so pervasive that disclosure of the relationship alone will be sufficient. If necessary to the understanding of the relationship, the name of the related party should be disclosed. Transactions shall not be purported to be arm's-length transactions unless there is demonstrable evidence to support such statement. The disclosures shall include:

- a. The nature of the relationships involved;
- b. A description of the transactions for each of the periods for which financial statements are presented, and such other information considered necessary to obtain an understanding of the effects of the transactions on the financial statements. Exclude reinsurance transactions, any non-insurance transactions which involve less than $\frac{1}{2}$ of 1% of the total admitted assets of the reporting entity, and cost allocation transactions. The following information shall be provided if applicable:
 - i. Date of transaction;
 - ii. Explanation of transaction;
 - iii. Name of reporting entity;
 - iv. Name of affiliate;
 - v. Description of assets received by reporting entity;
 - vi. Statement value of assets received by reporting entity;
 - vii. Description of assets transferred by reporting entity; and
 - viii. Statement value of assets transferred by reporting entity.
- c. The dollar amounts of transactions for each of the periods for which financial statements are presented and the effects of any change in the method of establishing the terms from that used in the preceding period;
- d. Amounts due from or to related parties as of the date of each balance sheet presented and, if not otherwise apparent, the terms and manner of settlement;
- e. Any guarantees or undertakings, written or otherwise, shall be disclosed in accordance with the requirements of SSAP No. 5R. In addition, the nature of the relationship to the beneficiary of the guarantee or undertaking (affiliated or unaffiliated) shall also be disclosed;
- f. A description of material management or service contracts and cost-sharing arrangements involving the reporting entity and any related party. This shall include, but is not limited to, sale lease-back arrangements, computer or fixed asset leasing arrangements, and agency

contracts, which remove assets otherwise recordable (and potentially nonadmitted) on the reporting entity's financial statements;

- g. The nature of the control relationship whereby the reporting entity and one or more other enterprises are under common ownership or control and the existence of that control could result in operating results or financial position of the reporting entity significantly different from those that would have been obtained if the enterprises were autonomous. The relationship shall be disclosed even though there are no transactions between the enterprises; and
- h. The amount deducted from the value of an upstream intermediate entity or ultimate parent owned, either directly or indirectly, via a downstream subsidiary, controlled, or affiliated entity, in accordance with the *Purposes and Procedure Manual of the NAIC Investment Analysis Office*, "Procedures for Valuing Common Stocks and Stock Warrants."

22. The disclosures of ownership interests in the reporting entity shall be provided outside of the financial statements (Schedule Y). The intent of this disclosure is to capture information related to active ownership and is not intended for passive fund owners to be reported.

- a. Disclosure is required for all owners with greater than 10% ownership of the reporting entity.
- b. Reporting entity must disclose each owner's ultimate controlling party and must provide a listing of other U.S. insurance groups or entities under that ultimate controlling party's control.

~~21,23.~~ Refer to the Preamble for further discussion regarding disclosure requirements.

Relevant Literature

~~22,24.~~ This statement adopts *FASB Statement No. 57, Related Party Disclosures* with a modification to paragraph 4 to require disclosure of compensation arrangements, expense allowances, and other similar items in the ordinary course of business.

~~23,25.~~ This statement rejects *ASU 2009-17, Consolidations (Topic 810)—Improvements to Financial Reporting by Enterprises Involved with Variable Interest Entities, ASU 2010-02, Consolidation (Topic 810)—Accounting and Reporting for Decreases in Ownership of a Subsidiary—a Scope Clarification, ASU 2010-10, Consolidations (Topic 810)—Amendments for Certain Investment Funds, ASU 2013-06, Not-For-Profit Entities, Services Received from Personnel of an Affiliate, ASU 2014-07, Consolidation (Topic 810)—Applying Variable Interest Entities Guidance to Common Control Leasing Arrangements, ASU 2015-02, Consolidation (Topic 810)—Amendments to the Consolidation Analysis, ASU 2016-17, Consolidation (Topic 810)—Interests Held through Related Parties That Are under Common Control, ASU 2018-17, Consolidation (Topic 810)—Targeted Improvements to Related Party Guidance for Variable Interest Entities* and *AICPA Accounting Interpretations, Business Combinations: Accounting Interpretations of APB Opinion No. 16, No. 39, "Transfers and Exchanges between Companies under Common Control."*

~~24,26.~~ Guidance in paragraph ~~98~~ was incorporated from SSAP No. 96 as discussed in *Issue Paper No. 128—Settlement Requirements for Intercompany Transactions, An Amendment to SSAP No. 25—Accounting for and Disclosures about Transactions with Affiliates and Other Related Parties*. SSAP No. 96 was nullified in 2011 with the guidance from that SSAP retained within this SSAP.

Effective Date and Transition

~~25-27.~~ This statement is effective for years beginning January 1, 2001. A change resulting from the adoption of this statement shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*.

~~26-28.~~ Guidance reflected in paragraph ~~98~~, incorporated from SSAP No. 96, is effective for reporting periods ending December 31, 2007. Early adoption is permitted. A change resulting from the application of this paragraph shall be accounted for as a change in accounting principle in accordance with *SSAP No. 3—Accounting Changes and Corrections of Errors*. Guidance reflected in paragraph 3, incorporated from *INT 03-16: Contribution of Stock*, was originally effective December 7, 2003.

Issue: Accounting for Perpetual Bonds

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Description of Issue: Questions have arisen regarding accounting treatment for perpetual bonds held as investments within scope of *SSAP No. 26R—Bonds*. A perpetual bond is a fixed income security, representing a creditor relationship, with a fixed schedule of future payments, however it does not contain a maturity date - thus yielding the definitional term “perpetual.” These bonds are typically not redeemable at the option of the holder but likely possess call options for the benefit of the issuer.

Perpetual bonds possess characteristics very similar to that of perpetual preferred stock in that both offer a projected return for an indefinite of time. The similarities of these two securities extend beyond both having indefinite lives and receiving periodic, scheduled income cash flows (i.e. interest for perpetual bonds and dividends for perpetual preferred stock). Both investments 1) have a higher than average duration from their perpetual cashflows reflecting a greater market value sensitivity, up and down, to interest rate movements, 2) generally are subject to issuer call provisions, and 3) do not possess voting rights. The only primary cashflow difference between perpetual bonds and perpetual preferred stock is seniority in the event of a liquidation (bond typically place higher in the liquidation hierarchy) – which is why perpetual preferred stock may warrant a higher yield to compensate for seniority risk.

Existing Authoritative Literature:

SSAP No. 26R does not contain specific or differing valuation and reporting guidance for perpetual bonds. These investments would be captured in the existing valuation and reporting guidance for bonds that are not mandatory convertible, which anticipate a scheduled maturity date. Under this existing guidance, bonds are held at amortized cost *or* lower of amortized cost or fair value, depending on NAIC designation of the bond. Due to perpetual bonds lacking a maturity date (and possessing indefinite lives), they are unable to experience accretion or amortization to yield an amortized cost basis.

SSAP No. 26R—Bonds

11. Bonds, as defined in paragraph 3, shall be valued and reported in accordance with this statement, the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*, and the designation assigned in the *NAIC Valuations of Securities* product prepared by the NAIC Securities Valuation Office (SVO).
 - a. Bonds, except for mandatory convertible bonds: For reporting entities that maintain an asset valuation reserve (AVR), the bonds shall be reported at **amortized cost**, except for those with an NAIC designation of 6, which shall be reported at the **lower of amortized cost or fair value**. For reporting entities that do not maintain an AVR, bonds that are designated highest-quality and high-quality (NAIC designations 1 and 2, respectively) shall be reported at **amortized cost**; all other bonds (NAIC designations 3 to 6) shall be reported at the lower of **amortized cost or fair value**.
 - b. Mandatory convertible bonds: Mandatory convertible bonds are subject to special reporting instructions and are not assigned NAIC designations or unit prices by the SVO. **The balance sheet amount for mandatory convertible bonds shall be reported at the**

lower of amortized cost or fair value during the period prior to conversion. This reporting method is not impacted by NAIC designation or information received from credit rating providers (CRPs). Upon conversion, these securities will be subject to the accounting guidance of the statement that reflects their revised characteristics. (For example, if converted to common stock, the security will be in scope of *SSAP No. 30R—Unaffiliated Common Stock*, if converted to preferred stock, the security will be in scope of *SSAP No. 32—Preferred Stocks*.)

Due to the numerous payment similarities between perpetual bonds and perpetual preferred stock, the accounting and reporting guidance for perpetual preferred stock is below. (Note: guidance below is from agenda item 2019-04: *SSAP No. 32 – Investment Classification Project*.) This agenda item substantially revises *SSAP No. 32—Preferred Stock* as a part of the Investment Classification Project. This guidance is anticipated for adoption during the Summer 2020 National Meeting

SSAP No 32R—Preferred Stock

10. Preferred stock shall be valued based on (a) the underlying characteristics (redeemable, **perpetual** or mandatory convertible), (b) the quality rating expressed as an NAIC designation, and (c) whether an asset valuation reserve (AVR) is maintained by the reporting entity:
 - a. **For reporting entities that do not maintain an AVR:**
 - i. Highest-quality or high-quality redeemable preferred stocks (NAIC designations 1 and 2) shall be valued at amortized cost. All other redeemable preferred stocks (NAIC designations 3 to 6) shall be reported at the lower of amortized cost or fair value.
 - ii. **Perpetual preferred stocks shall be reported at fair value, not to exceed any currently effective call price.**
 - iii. Mandatory convertible preferred stocks (regardless if the preferred stock is redeemable or perpetual) shall be reported at fair value, not to exceed any currently effective call price, in the periods prior to conversion. Upon conversion to common stock, these securities shall be in scope of *SSAP No. 30R*.
 - iv. For preferred stocks reported at fair value, unrealized gains and losses shall be recorded as a direct credit or charge to unassigned funds (surplus).
 - b. **For reporting entities that maintain an AVR:**
 - i. Highest-quality, high-quality or medium quality redeemable preferred stocks (NAIC designations 1 to 3) shall be valued at amortized cost. All other redeemable preferred stocks (NAIC designations 4 to 6) shall be reported at the lower of amortized cost or fair value.
 - ii. **Perpetual preferred stocks shall be valued at fair value, not to exceed any currently effective call price.**
 - iii. Mandatory convertible preferred stocks (regardless if the preferred stock is redeemable or perpetual) shall be reported at fair value, not to exceed any currently effective call price, in the periods prior to conversion. Upon conversion to common stock, these securities shall be in scope of *SSAP No. 30R*.
 - iv. For preferred stocks reported at fair value, the accounting for unrealized gains and losses shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve* (*SSAP No. 7*).

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): While not specific to perpetual bonds, in agenda item 2019-04: SSAP No. 32 – Investment Classification Project, the Working Group has agreed in principle with the accounting for perpetual preferred stock, which from an investor perspective, is materially similar to perpetual bonds.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:
None

Convergence with International Financial Reporting Standards (IFRS): N/A

Staff Recommendation:

NAIC Staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose revisions to *SSAP No. 26R—Bonds* to clarify that perpetual bonds shall be reported at fair value, not to exceed any current effective call price. Although this is considered a nonsubstantive change, if a stated effective date is preferred (instead of immediately upon adoption), NAIC staff recommends an effective date of Jan. 1, 2021, with early application permitted. (Although these bonds cannot amortize without a maturity date, NAIC staff notes that the specific reference to fair value may cause a change for reporting entities immediately before year-end. However, it is also noted that these types of bonds are not believed to be overly prevalent.)

SSAP No. 26R – Proposed Updates

Balance Sheet Amount

11. Bonds, as defined in paragraph 3, shall be valued and reported in accordance with this statement, the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*, and the designation assigned in the *NAIC Valuations of Securities* product prepared by the NAIC Securities Valuation Office (SVO).
 - a. Bonds, except for mandatory convertible bonds: For reporting entities that maintain an asset valuation reserve (AVR), the bonds shall be reported at amortized cost, except for those with an NAIC designation of 6, which shall be reported at the lower of amortized cost or fair value. For reporting entities that do not maintain an AVR, bonds that are designated highest-quality and high-quality (NAIC designations 1 and 2, respectively) shall be reported at amortized cost; all other bonds (NAIC designations 3 to 6) shall be reported at the lower of amortized cost or fair value. For perpetual bonds, the bonds shall be reported at fair value regardless of NAIC designation, not to exceed any current effective call price.
 - b. Mandatory convertible bonds: Mandatory convertible bonds are subject to special reporting instructions and are not assigned NAIC designations or unit prices by the SVO. The balance sheet amount for mandatory convertible bonds shall be reported at the lower of amortized cost or fair value during the period prior to conversion. This reporting method is not impacted by NAIC designation or information received from credit rating providers (CRPs). Upon conversion, these securities will be subject to the accounting guidance of the statement that reflects their revised characteristics. (For example, if converted to common stock, the security will be in scope of *SSAP No. 30R—Unaffiliated Common Stock*, if converted to preferred stock, the security will be in scope of *SSAP No. 32—Preferred Stocks*.)

Effective Date and Transition

36. Revisions adopted April 2019, to explicitly exclude securities for which the contract amount of the instrument to be paid at maturity (or the original investment) is at risk for other than failure of the borrower to pay the contractual amount due, are effective December 31, 2019.

[36-37. The reporting of perpetual bonds at fair value shall be effective January 1, 2021, with early adoption permitted.](#)

Staff Review Completed by: Jim Pinegar, NAIC Staff – May 2020

Status:

On July 30, 2020, the Statutory Accounting Principles (E) Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to *SSAP No. 26R—Bonds*, as illustrated above, to clarify that perpetual bonds shall be reported at fair value, not to exceed any current effective call price. Although this is considered a nonsubstantive change, a stated effective date of Jan. 1, 2021, with early application permitted, has been proposed to allow time for reporting entities to make measurement changes as needed.

On November 12, 2020, the Statutory Accounting Principles (E) Working Group exposed revisions to *SSAP No. 26R—Bonds*, as illustrated below, to clarify that perpetual bonds are within scope as a “bond,” and shall apply the yield-to-worst concept. Additionally, for perpetual bonds that do not possess or no longer possess a call feature shall follow fair value reporting.

SSAP No. 26R – Proposed Updates for the November 12th Interim Meeting:

In conjunction with the NAIC staff recommendation to retain bond accounting (i.e. amortized cost) for perpetual bonds that possess a future call date, however to require fair value accounting for those that do not (or no longer) possess a future call date, the following edits are recommended. All items below are new and have not previously been exposed.

Amortized Cost

9. Amortization of bond premium or discount shall be calculated using the scientific (constant yield) interest method taking into consideration specified interest and principal provisions over the life of the bond [FN](#). Bonds containing call provisions (where the issue can be called away from the reporting entity at the issuer’s discretion), except “make-whole” call provisions, shall be amortized to the call or maturity value/date which produces the lowest asset value (yield-to-worst). Although the concept for yield-to-worst shall be followed for all callable bonds, make-whole call provisions, which allow the bond to be callable at any time, shall not be considered in determining the timeframe for amortizing bond premium or discount unless information is known by the reporting entity indicating that the issuer is expected to invoke the make-whole call provision.

[New Footnote: For perpetual bonds with an effective call option, any applicable premium shall be amortized to the next effective call date. For perpetual bonds purchased at a discount, any applicable discount shall be accreted utilizing the yield-to-worst concept.](#)

Balance Sheet Amount

11. Bonds, as defined in paragraph 3, shall be valued and reported in accordance with this statement, the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*, and the designation assigned in the *NAIC Valuations of Securities* product prepared by the NAIC Securities Valuation Office (SVO).

a. Bonds, except for mandatory convertible bonds: For reporting entities that maintain an asset valuation reserve (AVR), the bonds shall be reported at amortized cost, except for those with an NAIC designation of 6, which shall be reported at the lower of amortized cost or fair value. For reporting entities that do not maintain an AVR, bonds that are designated highest-quality and high-quality (NAIC designations 1 and 2, respectively) shall be reported at amortized cost; all other bonds (NAIC designations 3 to 6) shall be reported at the lower of amortized cost or fair value. [For perpetual bonds in which do not possess or no longer possess an effective call option, the bond shall be reported at fair value regardless of NAIC designation.](#)

On March 15, 2021, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions to *SSAP No. 26R—Bonds*, as illustrated below, to clarify that perpetual bonds are within scope. Perpetual bonds with an effective call option shall be amortized under the yield-to-worst concept, whereas perpetual bonds that do not possess, or no longer possess, a call feature shall follow fair value reporting. The adopted revisions included edits discussed during the meeting.

Adopted Revisions to SSAP No. 26R:

Amortized Cost

9. Amortization of bond premium or discount shall be calculated using the scientific (constant yield) interest method taking into consideration specified interest and principal provisions over the life of the bond [FN](#). Bonds containing call provisions (where the issue can be called away from the reporting entity at the issuer's discretion), except "make-whole" call provisions, shall be amortized to the call or maturity value/date which produces the lowest asset value (yield-to-worst). Although the concept for yield-to-worst shall be followed for all callable bonds, make-whole call provisions, which allow the bond to be callable at any time, shall not be considered in determining the timeframe for amortizing bond premium or discount unless information is known by the reporting entity indicating that the issuer is expected to invoke the make-whole call provision.

[New Footnote: For perpetual bonds with an effective call option, any applicable premium shall be amortized utilizing the yield-to-worst method.](#)

Balance Sheet Amount

11. Bonds, as defined in paragraph 3, shall be valued and reported in accordance with this statement, the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*, and the designation assigned in the *NAIC Valuations of Securities* product prepared by the NAIC Securities Valuation Office (SVO).

c. Bonds, except for mandatory convertible bonds: For reporting entities that maintain an asset valuation reserve (AVR), the bonds shall be reported at amortized cost, except for those with an NAIC designation of 6, which shall be reported at the lower of amortized cost or fair value. For reporting entities that do not maintain an AVR, bonds that are designated highest-quality and high-quality (NAIC designations 1 and 2, respectively) shall be reported at amortized cost; all other bonds (NAIC designations 3 to 6) shall be reported at the lower of amortized cost or fair value. [For perpetual bonds in which do not possess or no longer possess an effective call option, the bond shall be reported at fair value regardless of NAIC designation.](#)

Issue: SSAP No. 26R - Disclosure Update

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Description of Issue: During the Summer National Meeting, through agenda item #2020-02: Accounting for Bond Tender Offers, the Working Group clarified that the accounting and reporting of investment income and capital gains/losses, due to early liquidation either through a call or a tender offer shall be similarly applied. This nonsubstantive update was effective on July 30; however, reporting entities that had historically applied a differing accounting methodology and required systems changes to properly account for the early termination of tendered bonds, were granted an effective date deferral of no later than January 1, 2021.

This agenda item is to expand an existing disclosure regarding called bonds to include tendered bond activity.

Existing Authoritative Literature: Only the relevant disclosures from *SSAP No. 26R—Bonds*, have been included below.

30. The financial statements shall include the following disclosures:
 - I. For securities sold, redeemed or otherwise disposed as a result of a callable feature (including make-whole call provisions), disclose the number of CUSIPs sold, disposed or otherwise redeemed and the aggregate amount of investment income generated as a result of a prepayment penalty and/or acceleration fee.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): Not Applicable.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): Not Applicable

Staff Recommendation: NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose revisions to the disclosures in *SSAP No. 26R—Bonds*. The revisions expand the called bond disclosures to also include bonds in which are terminated early through a tender offer.

30. The financial statements shall include the following disclosures:
 - I. For securities sold, redeemed or otherwise disposed as a result of a callable or tender offer feature (including make-whole call provisions), disclose the number of CUSIPs sold, disposed or otherwise redeemed and the aggregate amount of investment income generated as a result of a prepayment penalty and/or acceleration fee.

Issue: SSAP No. 32R – Publicly Traded Preferred Stock Warrants

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Description of Issue: NAIC staff received inquiries on which standard and reporting schedule would be most appropriate for publicly traded preferred stock warrants. A stock warrant represents the right to purchase a company's stock at a specific price and at a specific date and are typically issued directly by a company to an investor. When a stock warrant is exercised, the shares of the stock received are issued directly from the company itself, rather than another investor.

Stock warrants generally fall into scope of *SSAP No. 86—Derivatives*, although there is a special carveout for publicly traded common stock (see existing authoritative literature section). However due to the fact that the only difference between publicly traded common and preferred stock warrants is the type of stock an entity would receive (i.e. common or preferred stock), NAIC staff believe that publicly traded preferred stock warrants should receive a similar carveout from SSAP No. 86 and similar accounting and reporting treatment.

This agenda item proposes 1) to expand the scope of *SSAP No. 32R—Preferred Stock* to include publicly traded preferred stock warrants and 2) require publicly traded preferred stock warrants to be reported at fair value.

Existing Authoritative Literature:

Warrants, both public and private are described in SSAP No. 86, however publicly traded (common) stock warrants are scoped into *SSAP No. 30—Unaffiliated Common Stock* as highlighted below. (Note: only relevant excerpts have been included below.)

SSAP No. 86:

5. Derivative instruments include, but are not limited to; options, warrants used in a hedging transaction and not attached to another financial instrument, caps, floors, collars, swaps, forwards, futures, structured notes with risk of principal/original investment loss based on the terms of the agreement (in addition to default risk), and any other agreements or instruments substantially similar thereto or any series or combination thereof.

j. **“Warrants” are instruments that give the holder the right to purchase an underlying financial instrument at a given price and time or at a series of prices and times outlined in the warrant agreement.** Warrants may be issued alone or in connection with the sale of other securities, for example, as part of a merger or recapitalization agreement, or to facilitate divestiture of the securities of another business entity. **Publicly traded stock warrants are captured in scope of SSAP No. 30R—Unaffiliated Common Stock.** All other warrants, including non-publicly traded stock warrants, shall be captured in scope of SSAP No. 86.

Accordingly, as referenced in SSAP No. 86, publicly traded common stock warrants are captured within the scope of SSAP No. 30R, as highlighted below.

SSAP No. 30R:

4. In addition, the following equity investments are captured within scope of this statement:
 - a. Master limited partnerships trading as common stock and American deposit receipts only if the security is traded on the New York or NASDAQ exchange;
 - b. Publicly traded common stock warrants;**
 - c. Shares of SEC registered Investment Companies captured under the Investment Company Act of 1940 (open-end investment companies (mutual funds), closed-end funds and unit investment trusts), regardless of the types or mix of securities owned by the fund (e.g., bonds or stocks);
 - d. Exchange Traded Funds, except for those identified for bond or preferred stock treatment, as identified in Part Three of the *Purposes and Procedures Manual of the NAIC Investment Analysis Office* and published on the SVO's web page of www.NAIC.org;
 - e. Foreign open-end investment funds governed and authorized in accordance with regulations established by the applicable foreign jurisdiction. Other foreign funds are excluded from the scope of this statement; and
 - f. Equity interests in certified capital companies in accordance with *INT 06-02: Accounting and Reporting for Investments in a Certified Capital Company (CAPCO)*.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): N/A

Staff Recommendation:

NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose revisions to *SSAP No. 32R—Preferred Stock* and *SSAP No. 86—Derivatives*, which would scope publicly traded preferred stock warrants into SSAP No. 32R. This would result in publicly traded preferred stock warrants receiving similar treatment as publicly traded common stock warrants. Additionally, the publicly traded preferred stock warrants would be accounted for as perpetual preferred stock, thus requiring to be accounted for at fair value.

Proposed edits to *SSAP No. 86—Derivatives*:

5. Derivative instruments include, but are not limited to; options, warrants used in a hedging transaction and not attached to another financial instrument, caps, floors, collars, swaps, forwards, futures, structured notes with risk of principal/original investment loss based on the terms of the agreement (in addition to default risk), and any other agreements or instruments substantially similar thereto or any series or combination thereof.
 - j. "Warrants" are instruments that give the holder the right to purchase an underlying financial instrument at a given price and time or at a series of prices and times outlined in the warrant agreement. Warrants may be issued alone or in connection with the sale of other securities, for example, as part of a merger or recapitalization agreement, or to facilitate divestiture of the securities of another business entity. Publicly traded stock warrants are captured in scope of SSAP

No. 30R—Unaffiliated Common Stock or SSAP No. 32R—Preferred Stock. All other warrants, including non-publicly traded stock warrants, shall be captured in scope of SSAP No. 86.

Proposed edits to SSAP No. 32R—Preferred Stock:

SUMMARY CONCLUSION

3. Preferred stock which may or may not be publicly traded is a security that represents ownership of a corporation and gives the holder a claim prior to the claim of common stockholders on earnings and also generally on assets in the event of liquidation. Most preferred stock pays a fixed dividend that is paid prior to the common stock dividend, stated in a dollar amount or as a percentage of par value. Preferred stock does not usually carry voting rights. Preferred stock has characteristics of both common stock and debt. Preferred stock shall include:
 - a. Redeemable preferred stock, which is preferred stock subject to mandatory redemption requirements or whose redemption is at the option of the holders. Redeemable preferred stock is any stock which 1) the issuer undertakes to redeem at a fixed or determinable price on the fixed or determinable date or dates, whether by operation of a sinking fund or otherwise; or 2) is redeemable at the option of the holders. Preferred stock which meet one or more of these criteria would be classified as redeemable preferred stock, regardless of other attributes such as voting rights or dividend rights.
 - b. Perpetual preferred stock, which is preferred stocks which are not redeemable or for which redemption is not at the option of the holder (non-redeemable preferred stock). Perpetual preferred stock is any preferred stock which does not meet the criteria to be classified as redeemable preferred stock pursuant to paragraph 3.a.
 - c. Publicly traded preferred stock warrants.

Balance Sheet Amount

11. Preferred stock shall be valued based on (a) the underlying characteristics (redeemable, perpetual or mandatory convertible), (b) the quality rating expressed as an NAIC designation, and (c) whether an asset valuation reserve (AVR) is maintained by the reporting entity:
 - a. For reporting entities that do not maintain an AVR:
 - i. Highest-quality or high-quality redeemable preferred stocks (NAIC designations 1 and 2), which have characteristics of debt securities, shall be valued at cost or amortized cost. All other redeemable preferred stocks (NAIC designations 3 to 6) shall be reported at the lower of cost, amortized cost, or fair value.
 - ii. Perpetual preferred stock and publicly traded preferred stock warrants shall be reported at fair value, not to exceed any currently effective call price.
 - iii. Mandatory convertible preferred stocks (regardless if the preferred stock is redeemable or perpetual) shall be reported at fair value, not to exceed any currently effective call price, in the periods prior to conversion. Upon conversion to common stock, these securities shall be in scope of SSAP No. 30R.
 - iv. For preferred stocks reported at fair value, unrealized gains and losses shall be recorded as a direct credit or charge to unassigned funds (surplus)
 - b. For reporting entities that maintain an AVR:
 - i. Highest-quality, high-quality or medium quality redeemable preferred stocks (NAIC designations 1 to 3) shall be valued at amortized cost. All other redeemable preferred

stocks (NAIC designations 4 to 6) shall be reported at the lower of amortized cost or fair value.

- ii. Perpetual preferred stocks and publicly preferred stock warrants shall be valued at fair value, not to exceed any currently effective call price.
- iii. Mandatory convertible preferred stocks (regardless if the preferred stock is redeemable or perpetual) shall be reported at fair value, not to exceed any currently effective call price, in the periods prior to conversion. Upon conversion to common stock, these securities shall be in scope of SSAP No. 30R.
- iv. For preferred stocks reported at fair value, the accounting for unrealized gains and losses shall be in accordance with *SSAP No. 7—Asset Valuation Reserve and Interest Maintenance Reserve*.

Impairment of Perpetual Preferred Stock

14. For any decline in the fair value of perpetual preferred stock or publicly traded preferred stock warrants, which is determined to be other-than-temporary ^(INT 06-07), the perpetual preferred stock or warrant shall be written down to fair value as the new cost basis and the amount of the write down shall be accounted for as a realized loss. For reporting entities required to maintain an AVR, realized losses shall be accounted for in accordance with SSAP No. 7. Subsequent fluctuations in fair value shall be recorded as unrealized gains or losses. Future declines, which are determined to be other-than-temporary, shall be recognized as realized losses. A decline in fair value which is other-than-temporary includes situations where the reporting entity has made a decision to sell a preferred stock at an amount below its carrying value.

Staff Review Completed by: Jim Pinegar, NAIC Staff – September 2020

Status:

On November 12, 2020, the Statutory Accounting Principles (E) Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to *SSAP No. 32R—Preferred Stock* and *SSAP No. 86—Derivatives*, as illustrated above, to scope publicly traded preferred stock warrants into SSAP No. 32R with accounting at fair value.

On March 15, 2021, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions to *SSAP No. 32R—Preferred Stock* and *SSAP No. 86—Derivatives*, as shown above. These revisions scope publicly traded preferred stock warrants into SSAP No. 32R with accounting at fair value.

Issue: SSAP No. 43R – Government-Sponsored Enterprises – Credit Risk Transfer Transactions.

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Description of Issue:

During the 2019 Spring National Meeting, the Working Group adopted agenda item 2018-18: Structured Notes, which expanded the scope of *SSAP No. 43R—Loan-Backed and Structures Securities* to include certain Government-Sponsored Enterprises (GSE) – Credit Risk Transfer (CRT) Transactions.

Credit risk transfer securities are mortgage-referenced securities issued by government sponsored entities that are tied to a referenced pool of mortgages. These are instruments in which the payments received are linked to the interest and principal repayment of underlying mortgage loans from those identified in a particular pool of mortgages. For these instruments, investors may not receive a full return of principal as principal repayment is contingent on the ultimate repayment by the mortgage loan borrowers (as credit risk has been transferred to the investor). The program naming convention for CRT's was identified as Structured Agency Credit Risk (STACR) for Freddie Mac and Connecticut Avenue Securities (CAS) for Fannie Mae.

This agenda item has been drafted to reflect recent changes to the Freddie Mac STACR and Fannie Mae CAS programs. It is anticipated that future Freddie Mac STACR and Fannie Mae CAS issuances will be solely conducted through a Real Estate Mortgage Investment Conduit (REMIC) trust. The REMIC is functionally equivalent to the original Freddie Mac STACR and Fannie Mae CAS programs, in that the trusts will pay interest and principal to investors on a monthly basis. All other material characteristics also remain unaffected as the investment represents a large, diversified reference pool, multiple tranches are available to accommodate various risk appetites, and the notes are highly liquid with an estimated \$2 billion in buy/sale trades occurring each month. Also unchanged is that the STACR notes are not guaranteed by Freddie Mac (i.e., credit risk has been transferred) and CAS notes are not guaranteed by Freddie Mac, and both entities maintain the senior risk tranche, which is unfunded and not issued for public investors.

The primary difference in the use of a REMIC trust is that counterparty risk exposure to Freddie Mac and Fannie Mae is reduced as the trust is designed to stand on its own. The trust's assets are intended to fund interest and principal payments on the notes, thus insulating investors from a possible Freddie Mac or Fannie Mae insolvency. While several other benefits are touted, the use of a REMIC will also not subject international investors to U.S. withholding tax requirements, likely resulting in higher international investor participation.

In collaboration with NAIC Securities Valuation Office (SVO) staff, SAPWG support staff has confirmed that the anticipated use of a REMIC trust remains functionally equivalent and retains the same material risk structure as the original STACR and CAS programs. Additionally, investment in securities issued by a GSE REMIC trust remains within the review scope of the *Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual)*. Per part 4 of the P&P Manual, Mortgage Referenced Securities are not eligible for filing exemption and are subject to assessment by the Structures Securities Group.

This agenda item proposes to 1) include STACR and CAS REMIC's into the scope of SSAP No. 43R and, 2) align SSAP No. 43R guidance regarding the financial modeling of mortgage referenced securities to the requirements as directed in the P&P Manual.

Existing Authoritative Literature:***SSAP No. 43R—Loan-Backed and Structured Securities*****The inclusion GSE CRT securities into the scope of SSAP No. 43R is referenced in paragraph 5:**

5. Mortgage-referenced securities do not meet the definition of a loan-backed or structured security but are explicitly captured in scope of this statement. In order to qualify as a mortgage-referenced security, the **security must be issued by a government sponsored enterprise¹ in the form of a “credit risk transfer” in which the issued security is tied to a referenced pool of mortgages.** These securities do not qualify as “loan-backed securities” as the pool of mortgages are not held in trust and the amounts due under the investment are not backed or secured by the mortgage loans. **Rather, these items reflect instruments in which the payments received are linked to the credit and principal payment risk of the underlying mortgage loan borrowers captured in the referenced pool of mortgages. For these instruments, reporting entity holders may not receive a return of their full principal as principal repayment is contingent on repayment by the mortgage loan borrowers in the referenced pool of mortgages.** Unless specifically noted, the provisions for loan-backed securities within this standard apply to mortgage-referenced securities.

Financial modeling of CRT Securities is referenced in paragraph 27:**Designation Guidance**

27. For RMBS/CMBS securities within the scope of this statement, the initial NAIC designation used to determine the carrying value method and the final NAIC designation for reporting purposes is determined using a multi-step process. The *Purposes and Procedures Manual of the NAIC Investment Analysis Office* provides detailed guidance. A general description of the processes is as follows:

- a. Financial Modeling: The NAIC identifies securities where financial modeling must be used to determine the NAIC designation. NAIC designation based on financial modeling incorporates the insurers' carrying value for the security. For those securities that are financially modeled, the insurer must use NAIC CUSIP specific modeled breakpoints provided by the modelers in determining initial and final designation for these identified securities. Securities where modeling results in zero expected loss in all scenarios are automatically considered to have a final NAIC designation of NAIC 1, regardless of the carrying value. The three-step process for modeled securities is as follows:
 - i. Step 1: Determine Initial Designation – The current amortized cost (divided by remaining par amount) of a loan-backed or structured security is compared to the modeled breakpoint values assigned to the six (6) NAIC designations for each CUSIP to establish the initial NAIC designation.
 - ii. Step 2: Determine Carrying Value Method – The carrying value method, either the amortized cost method or the lower of amortized cost or fair value method, is then determined as described in paragraph 26 based upon the initial NAIC designation from Step 1.
 - iii. Step 3: Determine Final Designation – The final NAIC designation that shall be used for investment schedule reporting is determined by comparing the carrying value (divided by remaining par amount) of a security (based on paragraph 27.a.ii.) to the NAIC CUSIP specific modeled breakpoint values assigned to the six (6) NAIC designations for each CUSIP. This final NAIC designation shall be applicable for statutory accounting and reporting purposes (including establishing the AVR

¹ Currently, only Fannie Mae and Freddie Mac are the government sponsored entities that issue qualifying mortgage-referenced securities. However, this guidance would apply to mortgage-referenced securities issued by any other government sponsored entity that subsequently engages in the transfer of residential mortgage credit risk.

charges). The final designation is not used for establishing the appropriate carrying value method in Step 2 (paragraph 27.a.ii.).

- b. All Other Loan-Backed and Structured Securities: For loan-backed and structured securities not subject to paragraphs 27.a. (financial modeling) follow the established designation procedures according to the appropriate section of the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*. The NAIC designation shall be applicable for statutory accounting and reporting purposes (including determining the carrying value method and establishing the AVR charges). The carrying value method is established as described in paragraph 26. Examples of these securities include, but are not limited to, **mortgage-referenced securities**, equipment trust certificates, credit tenant loans (CTL), 5*/6* securities, interest only (IO) securities, securities with CRP ratings (excluding RMBS/CMBS), and loan-backed and structured securities with SVO assigned NAIC designations.

Specific Interim Reporting Guidance for RMBS/CMBS Securities

28. The guidance in this paragraph shall be applied in determining the reporting method for residential mortgage-backed securities (RMBS) and commercial mortgage-backed securities (CMBS) acquired in the current year for quarterly financial statements. Securities reported as of the prior-year end shall continue to be reported under the prior-year end methodology for the current-year quarterly financial statements. For year-end reporting, securities shall be reported in accordance with paragraph 27, regardless of the quarterly methodology used.

- a. Reporting entities that acquired the entire financial modeling database for the prior-year end are required to follow the financial modeling methodology (paragraph 27.a.) for all securities acquired in the subsequent year that were included in the financial modeling data acquired for the prior year-end.
- b. Reporting entities that acquired identical securities (identical CUSIP) to those held and financially modeled for the prior year-end are required to follow the prior year-end financial modeling methodology (paragraph 27.a.) for these securities acquired subsequent to year-end.
- c. Reporting entities that do not acquire the prior-year financial modeling information for current-year acquired individual CUSIPS, and are not captured within paragraphs 28.a. or 28.b., are required to follow the analytical procedures for non-financially modeled securities (paragraph 27.b. as appropriate). Reporting entities that do acquire the individual CUSIP information from the prior-year financial modeling database shall use that information for interim reporting.
- d. Reporting entities that acquire securities not previously modeled at the prior year-end are required to follow the analytical procedures for non-financially modeled securities (paragraph 27.b. as appropriate).

Purposes and Procedures Manual of the NAIC Investment Analysis Office (P&P Manual); Part 4 –Mortgage Reference Securities:

Definition

29. A Mortgage Referenced Security has the following characteristics: A Mortgage Referenced Security's coupon and/or principal payments are linked, in whole or in part, to prices of, or payment streams from, real estate, index or indices related to real estate, or assets deriving their value from instruments related to real estate, including, but not limited to, mortgage loans.

Not Filing Exempt

30. A Mortgage Referenced Security is not eligible for filing exemption but is subject to the filing requirement.

NAIC Risk Assessment

31. In determining the NAIC Designation of a Mortgage Referenced Security, **the SSG may use the financial modeling methodology discussed in this Part, adjusted (if and as necessary) to the specific reporting and accounting requirements applicable to Mortgage Referenced Securities.**

Quarterly Reporting for Mortgage Reference Securities

32. To determine the NAIC Designation to be used for quarterly financial statement reporting for a Mortgage Reference Security purchased subsequent to the annual surveillance described in this Part, the insurer uses the prior year-end modeling data for that CUSIP (which can be obtained from the NAIC) until the annual surveillance data is published for the current year. For a Mortgage Reference Security that is not in the prior year-end modeling data for that CUSIP, the insurer may follow the instructions in Part Two of this manual for the assignment of the SVO Administrative Symbol “Z” provided the insurer owned security meets the criteria for a security that is in transition in reporting or filing

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group: Relevant background from agenda item 2018-18 was included in the ‘Description of Issue’ section.

Convergence with International Financial Reporting Standards (IFRS): N/A

Staff Recommendation:

NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose revisions to *SSAP No. 43R—Loan-Backed and Structures Securities*, incorporating minor scope modifications to reflect recent changes to the STACR and CAS programs. The proposed edits would allow credit risk transfer securities from Freddie Mac and Fannie Mae to remain in scope when a REMIC structure is used in the STACR program or CAS program.

5. Mortgage-referenced securities do not meet the definition of a loan-backed or structured security but are explicitly captured in scope of this statement. In order to qualify as a mortgage-referenced security, the security must be issued by a government sponsored enterprise² [or by a special purpose trust in a transaction sponsored by a government sponsored enterprise](#) in the form of a “credit risk transfer” in which the issued security is tied to a referenced pool of mortgages ~~and. These securities do not qualify as “loan-backed securities” as the pool of mortgages are not held in trust and the amounts due under the investment are not backed or secured by the mortgage loans. Rather, these items reflect instruments in which~~ the payments received are linked to the credit and principal payment risk of the underlying mortgage loan borrowers captured in the referenced pool of mortgages. For these instruments, reporting entity holders may not receive a return of their full principal as principal repayment is contingent on repayment by the mortgage loan borrowers in the referenced pool of mortgages. Unless specifically noted, the provisions for loan-backed securities within this standard apply to mortgage-referenced securities.

27. For RMBS/CMBS securities within the scope of this statement, the initial NAIC designation used to determine the carrying value method and the final NAIC designation for reporting purposes is determined

² Currently, only Fannie Mae and Freddie Mac are the government sponsored entities that [either directly](#) issue qualifying mortgage-referenced securities [or sponsor transactions in which special purpose trust issues qualifying mortgage-reference securities](#). However, this guidance would apply to mortgage-referenced securities issued by any other government sponsored entity that subsequently engages in the transfer of ~~residential~~ mortgage credit risk.

using a multi-step process. The *Purposes and Procedures Manual of the NAIC Investment Analysis Office* provides detailed guidance. A general description of the processes is as follows:

- a. Financial Modeling: Pursuant to the P&P manual, ~~the~~ NAIC identifies select securities where financial modeling must be used to determine the NAIC designation. NAIC designation based on financial modeling incorporates the insurers' carrying value for the security. For those securities that are financially modeled, the insurer must use NAIC CUSIP specific modeled breakpoints provided by the modelers in determining initial and final designation for these identified securities. Securities where modeling results in zero expected loss in all scenarios are automatically considered to have a final NAIC designation of NAIC 1, regardless of the carrying value. The three-step process for modeled securities is as follows:
 - i. Step 1: Determine Initial Designation – The current amortized cost (divided by remaining par amount) of a loan-backed or structured security is compared to the modeled breakpoint values assigned to the six (6) NAIC designations for each CUSIP to establish the **initial** NAIC designation.
 - ii. Step 2: Determine Carrying Value Method – The carrying value method, either the amortized cost method or the lower of amortized cost or fair value method, is then determined as described in paragraph 26 based upon the initial NAIC designation from Step 1.
 - iii. Step 3: Determine Final Designation – The final NAIC designation that shall be used for investment schedule reporting is determined by comparing the carrying value (divided by remaining par amount) of a security (based on paragraph 27.a.ii.) to the NAIC CUSIP specific modeled breakpoint values assigned to the six (6) NAIC designations for each CUSIP. This final NAIC designation shall be applicable for statutory accounting and reporting purposes (including establishing the AVR charges). The final designation is not used for establishing the appropriate carrying value method in Step 2 (paragraph 27.a.ii.).
- b. All Other Loan-Backed and Structured Securities: For securities loan-backed and structured securities not subject to paragraphs 27.a. (financial modeling) follow the established designation procedures according to the appropriate section of the *Purposes and Procedures Manual of the NAIC Investment Analysis Office*. The NAIC designation shall be applicable for statutory accounting and reporting purposes (including determining the carrying value method and establishing the AVR charges). The carrying value method is established as described in paragraph 26. Examples of these securities include, but are not limited to, ~~mortgage-referenced securities~~, equipment trust certificates, credit tenant loans (CTL), 5*/6* securities, interest only (IO) securities, securities with CRP ratings (excluding RMBS/CMBS), ~~and~~ loan-backed and structured securities and mortgage-referenced securities with SVO assigned NAIC designations.

Specific Interim Reporting Guidance Financially Modeled ~~for RMBS/CMBS~~ Securities

28. For securities that will be financially modeled under paragraph 27, ~~the~~ guidance in this paragraph shall be applied in determining the reporting method for such securities ~~residential mortgage-backed securities (RMBS) and commercial mortgage-backed securities (CMBS)~~ acquired in the current year for quarterly financial statements. Securities reported as of the prior-year end shall continue to be reported under the prior-year end methodology for the current-year quarterly financial statements. For year-end reporting, securities shall be reported in accordance with paragraph 27, regardless of the quarterly methodology used.

- a. Reporting entities that acquired the entire financial modeling database for the prior-year end are required to follow the financial modeling methodology (paragraph 27.a.) for all securities acquired in the subsequent year that were included in the financial modeling data acquired for the prior year-end.

- b. Reporting entities that acquired identical securities (identical CUSIP) to those held and financially modeled for the prior year-end are required to follow the prior year-end financial modeling methodology (paragraph 27.a.) for these securities acquired subsequent to year-end.
- c. Reporting entities that do not acquire the prior-year financial modeling information for current-year acquired individual CUSIPS, and are not captured within paragraphs 28.a. or 28.b., are required to follow the analytical procedures for non-financially modeled securities (paragraph 27.b. as appropriate). Reporting entities that do acquire the individual CUSIP information from the prior-year financial modeling database shall use that information for interim reporting.
- d. Reporting entities that acquire securities not previously modeled at the prior year-end are required to follow the analytical procedures for non-financially modeled securities (paragraph 27.b. as appropriate).

Staff Review Completed by:

Jim Pinegar –August 2020
NAIC Staff

Status:

On November 12, 2020, the Statutory Accounting Principles (E) Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to *SSAP No. 43R—Loan-Backed and Structures Securities*, as illustrated above, to incorporate minor scope modifications to reflect recent changes to the STACR and CAS programs. The proposed edits would allow credit risk transfer securities from Freddie Mac and Fannie Mae to remain in scope of SSAP No. 43R when a REMIC structure is used in the STACR program or CAS program.

On March 15, 2021, the Statutory Accounting Principles (E) Working Group adopted, as final, the exposed revisions to *SSAP No. 43R—Loan-Backed and Structures Securities*, as illustrated above, to incorporate minor scope modifications to reflect recent changes to the Freddie Mac Structured Agency Credit Risk (STACR) and Fannie Mae Connecticut Avenue Securities (CAS) programs. The edits allow credit risk transfer securities from Freddie Mac and Fannie Mae to remain in scope of SSAP No. 43R when a REMIC structure is used in the STACR program or CAS program.

**Statutory Accounting Principles (E) Working Group
Maintenance Agenda Submission Form
Form A**

Issue: SSAP No. 97 – Audit Opinions

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Description of Issue: *SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities* provides guidance for the various audit opinions that can be issued when an entity records certain investments utilizing the U.S. GAAP equity method of accounting.

The complete guidance for the various audit opinions is included in the ‘Existing Authoritative Literature,’ however the relevant guidance is summarized as:

- Disclaimers of opinion shall be nonadmitted.
- Qualified opinions due to a scope limitation can only be admitted if the limitation is quantified, then the quantified limitation is nonadmitted.
- Qualified opinions due to a GAAP departure can only be admitted if the departure is quantified (then the departure is nonadmitted), OR if the departure is as the result of utilizing a statutory accounting principle in lieu of following GAAP (in such cases, a quantification of the departure is not required).
- Adverse opinions due to a GAAP departure can only be admitted if the departure is quantified (then the quantified departure is nonadmitted), OR if the departure is as the result of utilizing a statutory accounting principle in lieu of following GAAP (in such cases, a quantification of the departure is not required).

The allowance of qualified or adverse audit opinions for admission of SCA investments without quantification are only permitted for U.S. insurance entities (commonly referred to as an 8.b.i entity). This agenda item proposes to expand the quantification exception guidance to 8.b.iii entities (referred to as U.S. GAAP SCA entities) in limited situations. Particularly, the proposed exception would allow U.S. GAAP SCA entities that depart from a U.S. GAAP provision that has been rejected for statutory accounting to be admitted SCAs without quantification if the departure from U.S. GAAP results in a more conservative position (i.e. fewer assets or greater liabilities), as a result of the departure.

Although specific quantification is not needed, this would require auditor certification that the departure from U.S. GAAP results in a more conservative position. From a situation shared in which an 8.b.iii SCA (U.S. GAAP entity) was following provisions similar to the insurer with regards to revenue recognition, the auditor noted that the U.S. GAAP revenue recognition provisions (which requires consideration of future, expected activity) warranted a qualified opinion. Under the existing guidance, this qualified opinion results in nonadmittance of the SCA because it could not be quantified, which was material to the reporting entity. This nonadmittance treatment was noted to be punitive as the SCA was following processes that were consistent with SAP accounting that resulted in a more conservative financial statement representation of the SCA.

Existing Authoritative Literature: The entity types (8.b.i, 8.b.ii, etc.) referenced in the ‘Description of Issue,’ the audit opinion requirements and the permitted exceptions to the unqualified opinion requirements within SSAP No. 97 are below. Relevant guidance has been **bolded** for emphasis.

*SSAP No. 97—Investments in Subsidiary, Controlled and Affiliated Entities***Applying the Market Valuation, Audited Statutory Equity and Audited GAAP Equity Methods**

8. The admitted investments in SCA entities shall be valued using either the market valuation approach (as described in paragraph 8.a.), or one of the equity methods (as described in paragraph 8.b.) adjusted as appropriate in accordance with the guidance in *SSAP No. 25—Affiliates and Other Related Parties*, paragraph 17.d.

- a. In order to use the market valuation approach for SCA entities, the following requirements apply:
 - i. The subsidiary must be traded on one of the following major exchanges: (1) the New York Stock Exchange, (2) the NASDAQ, or (3) the Japan Exchange Group;
 - ii. The reporting entity must submit subsidiary information to the NAIC SCA analysts for calculation of the subsidiary's market value. Such calculation could result in further discounts in market value above the established base discounts based on ownership percentages detailed below;
 - iii. Ownership percentages for determining the discount rate shall be measured at the holding company level;
 - iv. If an investment in a SCA results in an ownership percentage between 10% and 50%, a base discount percentage between 0% and 20% on a sliding scale basis is required;
 - v. If an investment in a SCA results in an ownership percentage greater than 50% up to and including 80%, a base discount percentage between 20% and 30% on a sliding scale basis is required;
 - vi. If an investment in a SCA results in an ownership percentage greater than 80% up to and including 85%, a minimum base discount percentage of 30% is required.
 - vii. Further, the SCA must have at least two million shares outstanding, with a total market value of at least \$50 million in the public's control; and
 - viii. Any ownership percentages exceeding 85% will result in the SCA being recorded on an equity method.
- b. If a SCA investment does not meet the requirements for the market valuation approach in paragraph 8.a. or, if the requirements are met, but a reporting entity elects not to use that approach, the reporting entity's proportionate share of its investments in SCAs shall be recorded as follows:
 - i. **Investments in U.S. insurance SCA entities shall be recorded based on either** 1) the underlying audited statutory equity of the respective entity's financial statements, adjusted for any unamortized goodwill as provided for in *SSAP No. 68—Business Combinations and Goodwill* or 2) **the underlying audited statutory equity of the respective entity's financial statements**, adjusted for any unamortized goodwill, modified to remove the impact of any permitted or prescribed accounting practices that depart from the *NAIC Accounting Practices and Procedures Manual*. Reporting entities shall record investments in U.S. insurance SCA entities on at least a quarterly basis, and shall base the investment value on the most recent quarterly information available from the SCA. Entities may recognize their investment in U.S. insurance SCA entities based on the unaudited statutory equity in the SCAs year-end annual statement if the annual SCA audited financial statements are not complete as of the filing deadline. The

recorded statutory equity shall be adjusted for audit adjustments, if any, as soon as the annual audited financial statements have been completed. Annual consolidated or combined audits are allowed if completed in accordance with the Model Regulation Requiring Annual Audited Financial Reports as adopted by the SCA's domiciliary state;

- iii. **Investments in both U.S. and foreign noninsurance SCA entities that do not qualify under paragraph 8.b.ii., shall be recorded based on the audited U.S. GAAP equity of the investee.** Foreign SCA entities are defined as those entities incorporated or otherwise legally formed under the laws of a foreign country. Additional guidance on investments in downstream holding companies is included in paragraphs 22-27. Additional guidance on the use of audited foreign GAAP basis financial statements for the U.S. GAAP equity valuation amount is included in paragraph 23.b.

Qualified Versus Unqualified Opinions

21. Various opinions can be issued in which an entity can record certain investments under the GAAP Equity method of accounting. The reporting entity shall record investments that require audited GAAP equity in the manner described below when the audit opinion on the GAAP financial statements contains the following language:

- a. _____ The investment shall be nonadmitted if the audit opinion contains a disclaimer of opinion for the most recent statement of financial position presented in the financial statements.
- b. The investment shall be nonadmitted if the audit opinion contains a qualified opinion due to a scope limitation that impacts the most recent statement of financial position presented in the financial statements and the impact of the scope limitation cannot be quantified. However, if the impact of the scope limitation is quantified in the audited financial statements or the audit opinion, the investment shall be admitted and the reporting entity's valuation of the investment shall be determined based on the GAAP equity of the investee, adjusted to exclude the impact of the quantified scope limitation.
- c. **The investment shall be nonadmitted if the audit opinion contains a qualified opinion due to a departure from GAAP** that impacts the most recent statement of financial position presented in the financial statements and the impact of such departure is not quantified in either the auditor's report or the footnotes to the financial statements (see quantification exception related to the valuation of a U.S. insurance entity on the basis of U.S. statutory accounting principles discussed below). However, if the impact of the departure from GAAP is quantified in the audited financial statements or the audit opinion, the investment shall be admitted and the reporting entity's valuation of the investment shall be determined based on the GAAP equity of the investee, adjusted to exclude the impact of the quantified departure from GAAP. **EXCEPTION: There is no need to quantify the impact of a departure from GAAP in either the auditor's report or the footnotes to the financial statements if a qualified audit opinion is issued due to a departure from GAAP and the departure is related to the valuation of an U.S. insurance entity on the basis of U.S. statutory accounting principles. In such cases, the investment shall be admitted without quantifying the departure.**
- d. **The investment shall be nonadmitted if the audit opinion contains an adverse opinion due to a departure from GAAP** that impacts the most recent statement of financial position presented in the financial statements and the impact of such departure is not quantified in either the auditor's report or the footnotes to the financial statements (see quantification exception related to the valuation of a U.S. insurance entity on the basis of U.S. statutory accounting principles discussed below). However, if the impact of the departure from GAAP is quantified in the audited financial statements or the audit opinion, the investment shall be admitted and the reporting entity's valuation of the investment shall be determined based on the GAAP equity of the investee, adjusted to exclude the impact of the quantified departure from GAAP. **EXCEPTION: There is no need to quantify the**

impact of a departure from GAAP in either the auditor's report or the footnotes to the financial statements if an adverse audit opinion is issued due to a departure from GAAP and the departure is related to the valuation of an U.S. insurance entity on the basis of U.S. statutory accounting principles. In such cases, the investment shall be admitted without quantifying the departure.

- e. The investment shall be nonadmitted if the audit report or accompanying financial statements/notes contains explanatory language indicating there is an unalleviated substantial doubt about the investee's ability to continue as a going concern.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:
None

Convergence with International Financial Reporting Standards (IFRS): Not Applicable

Staff Recommendation: NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and request comments on the extent to which situations exist that hinder admittance of 8.b.iii entities due to the departure of U.S. GAAP as a result of the inability to quantify the departure.

Staff Review Completed by: Jim Pinegar - NAIC Staff – September 2020

Status:

On November 12, 2020, the Statutory Accounting Principles (E) Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed this agenda item with a request for comments on the extent in which situations exist that hinder admittance of 8.b.iii. entities due to the inability to quantify a departure from U.S. GAAP.

On March 15, 2021, the Statutory Accounting Principles (E) Working Group disposed of this agenda item, without statutory revisions, as the issue of nonadmittance due to the inability to quantify a departure from U.S. GAAP is not prevalent.

**Statutory Accounting Principles (E) Working Group
Maintenance Agenda Submission Form
Form A**

Issue: Interpretation Policy Statement Updates

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Description of Issue: This agenda item proposes edits to Appendix F of the *NAIC Policy Statement on Maintenance of Statutory Accounting Principles*, clarifying the requirements regarding the issuance and adoption of accounting interpretations.

Existing Authoritative Literature:

NAIC Policy Statement on Maintenance of Statutory Accounting Principles (Appendix F) documents the requirements of interpretation issuances and adoptions.

Development of Interpretations to SSAPs and Referencing Interpretations Within SSAPs

9. Interpretations will be developed to address, but will not be limited to issues requiring timely application or clarification of existing SAP, which shall not amend, supersede or conflict with existing, effective SSAPs. Issues being considered as an interpretation must be discussed at no less than two open meetings. (Original introduction of the issue when the Working Group identifies the intent to address the issue as an "interpretation" during a public discussion is considered the first open meeting discussion.) The process must allow opportunity for interested parties to provide comments, but as interpretations are intended to provide timely responses to questions of application or interpretation and clarification of guidance, no minimum exposure timeframe is required.

10. The voting requirement to adopt an interpretation is a simple majority. As interpretations do not amend, supersede or conflict with existing SSAP guidance, the interpretation is effective upon Working Group adoption unless specifically stated otherwise. The Working Group shall report the adopted interpretation to the Task Force as part of its public report during the next NAIC national meeting (or earlier if applicable). Interpretations can be overturned, amended or deferred only by a two-thirds majority of the Task Force membership.

11. In rare circumstances, the Working Group may adopt an interpretation which creates new SAP or conflicts with existing SSAPs. Historically, these interpretations temporarily modified statutory accounting principles and/or specific disclosures were developed in response to nationally significant events (e.g., Hurricane Sandy, September 11, 2001). In order to adopt an interpretation that creates new SAP or conflicts with existing SSAPs, the Working Group must have 67% of its members voting (10 out of 15 members) with a super majority (7 out of 10, 8 out of 11 or 12, 9 out of 13, 10 out of 14, or 11 out of 15) supporting adoption. These interpretations can be adopted, overturned, amended or deferred only by a two-thirds majority of the Task Force membership.

12. As new SSAPs are developed, it is essential to review and, if necessary, update the status of interpretations related to SSAPs that are being replaced and/or new SSAPs being developed. The following options are available to the Working Group when a SSAP with existing interpretations is replaced:

- a. **Interpretation of the new SSAP** - If the Working Group would like to maintain the interpretation, the new SSAP can be added to the list of statements interpreted by the interpretation. In addition, the status section of the new SSAP will list the interpretation number next to the heading "Interpreted by."
- b. **Nullification** - When an interpretation is nullified by a subsequent SSAP or superseded by another interpretation, the interpretation is deemed no longer technically helpful, is shaded and moved to Appendix H (Superseded SSAPs and Nullified Interpretations), and the reason for the change is noted beneath the interpretation title. The status section of the SSAP describes the impact of the new guidance and the effect on the interpretation (for example, nullifies, incorporated in the new SSAP with paragraph reference, etc.).
- c. **Incorporation** - When an interpretation is incorporated into a new SSAP, the Working Group can choose from the following two options:
 - i. If the interpretation only interprets one SSAP, then the interpretation is listed as being nullified under the "affects" section of the SSAP and is not referenced under the "interpreted by" section of the status page of the SSAP.
 - ii. If the interpretation references additional SSAPs, and the Working Group intends to maintain the guidance, the interpretation is unchanged (no nullification). The new SSAP (Summary of Issue section) reflects that the interpretation issue has been incorporated into the new statement.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): N/A

Staff Recommendation: NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive and expose clarifying revisions to *NAIC Policy Statement on Maintenance of Statutory Accounting Principles* in Appendix F regarding the issuance and adoption of accounting interpretations.

Development of Interpretations to SSAPs and Referencing Interpretations Within SSAPs

Interpretations which DO NOT amend, supersede, or conflict with existing SSAPs

9. Interpretations will may be developed to address, ~~but will not be limited to~~ issues requiring timely application or clarification of existing SAP, which shall not amend, supersede or conflict with ~~existing~~, effective SSAPs. Issues being considered as an interpretation must be discussed at no less than two open meetings. (Original introduction of the issue when the Working Group identifies the intent to address the issue as an "interpretation" during a public discussion is considered the first open meeting discussion.) The process must allow opportunity for interested parties to provide comments, but as interpretations are intended to provide timely responses to questions of application or interpretation and clarification of guidance, no minimum exposure timeframe is required.

10. ~~The voting requirement to adopt an interpretation is a simple majority.~~ As these interpretations do not amend, supersede or conflict with existing SSAP guidance, the interpretation is effective upon Working Group adoption, unless specifically stated otherwise. The voting requirement to adopt an interpretation of this type is a simple majority. The Working Group shall report the adopted interpretation to the Accounting Practice and Procedures (E) Task Force as part of its public report during the next NAIC national meeting (or earlier if applicable). Interpretations can be overturned, amended or deferred ~~only~~ by a two-thirds majority of the Task Force membership. For clarification, a two-thirds majority of the Task Force requires two-thirds of the entire Task Force membership, not just those electing to vote. Additionally, interpretations

can be overturned, amended, deferred, or referred to either the Task Force and/or the Working Group by a simple majority of the Financial Condition (E) Committee.

Interpretations which amend, supersede, or conflict with existing SSAPs

11. In ~~rare~~certain circumstances, the Working Group may adopt an interpretation which creates a new SAP or conflicts with existing SSAPs. Historically, these interpretations temporarily modified statutory accounting principles and/or specific disclosures were developed in response to nationally significant events (e.g., Hurricane Sandy, September 11, 2001). In order to adopt an interpretation that creates new SAP or conflicts with existing SSAPs, the Working Group must have 67% of its members voting (10 out of 15 members) with a super majority (7 out of 10, 8 out of 11 or 12, 9 out of 13, 10 out of 14, or 11 out of 15) supporting adoption.

a. These interpretations are effective upon Working Group adoption, unless stated otherwise, and shall be reported to the Accounting Practice and Procedures (E) Task Force as part of its public report during the next NAIC national meeting (or earlier if applicable). In circumstance where the Working Group adopts an interpretation (which creates new SAP or conflicts with existing SSAPs) that is controversial in nature (i.e. due to regulator or industry feedback or could have a policy level impact), the Working Group may elect to postpone the effective date until the item has been discussed by the Task Force and the Financial Condition (E) Committee and both have had an opportunity to review the interpretation.

b. These interpretations can be ~~adopted~~ overturned, amended or deferred by a two-thirds majority of the Task Force membership. For clarification, a two-thirds majority of the Task Force requires two-thirds of entire Task Force membership, not just those electing to vote. Additionally, interpretations can be overturned, amended, deferred, or referred to either the Task Force and/or the Working Group by a simple majority of the Financial Condition (E) Committee.

Staff Review Completed by: Jim Pinegar, NAIC Staff – August 2020

Status:

On November 12, 2020, the Statutory Accounting Principles (E) Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to *NAIC Policy Statement on Maintenance of Statutory Accounting Principles* in *Appendix F—Policy Statements* regarding the issuance and adoption of accounting interpretations, as illustrated above.

On March 15, 2021, the Statutory Accounting Principles (E) Working Group, adopted, as final, revisions to *NAIC Policy Statement on Maintenance of Statutory Accounting Principles* in *Appendix F—Policy Statements* in *Appendix F—Policy Statements*, as illustrated below, regarding the issuance and adoption of accounting interpretations. This adoption included additional revisions to paragraph 11, as discussed during the meeting.

Appendix F – Adopted Revisions:

Development of Interpretations to SSAPs and Referencing Interpretations Within SSAPs

Interpretations which DO NOT amend, supersede, or conflict with existing SSAPs

9. Interpretations ~~will~~may be developed to address, ~~but will not be limited to~~ issues requiring timely application or clarification of existing SAP, which shall not amend, supersede or conflict with ~~existing~~, effective SSAPs. Issues being considered as an interpretation must be discussed at no less than two open meetings. (Original introduction of the issue when the Working Group identifies the intent to address the issue as an “interpretation” during a public discussion is considered the first open meeting discussion.) The process must allow opportunity for interested parties to provide comments, but as interpretations are intended to provide timely responses to questions of application or interpretation and clarification of guidance, no minimum exposure timeframe is required.

10. ~~The voting requirement to adopt an interpretation is a simple majority.~~ As [these](#) interpretations do not amend, supersede or conflict with existing SSAP guidance, the interpretation is effective upon Working Group adoption, unless specifically stated otherwise. [The voting requirement to adopt an interpretation of this type is a simple majority.](#) The Working Group shall report the adopted interpretation to the [Accounting Practice and Procedures \(E\) Task Force](#) as part of its public report during the next NAIC national meeting (or earlier if applicable). Interpretations can be overturned, amended or deferred ~~only~~ by a two-thirds majority of the Task Force membership. [For clarification, a two-thirds majority of the Task Force requires two-thirds of the entire Task Force membership, not just those electing to vote. Additionally, interpretations can be overturned, amended, deferred, or referred to either the Task Force and/or the Working Group by a simple majority of the Financial Condition \(E\) Committee.](#)

[Interpretations which amend, supersede, or conflict with existing SSAPs](#)

11. In ~~rare~~ certain circumstances [such as catastrophes and other time-sensitive issues requiring immediate, temporary statutory accounting guidance,](#) the Working Group may adopt an interpretation which creates a new SAP or conflicts with existing SSAPs. Historically, these interpretations temporarily modified statutory accounting principles and/or specific disclosures were developed in response to nationally significant events (e.g., Hurricane Sandy, September 11, 2001). [\(Examples of time sensitive issues that have been previously provided INT exceptions to SAP include the transition from LIBOR and special situations such as at the federal TALF program.\)](#) Interpretations that conflict with existing SSAPs shall be temporary and restricted to circumstances arising from the need to issue guidance for circumstance [requiring immediate guidance.](#) In order to adopt an interpretation that creates new SAP or conflicts with existing SSAPs, the Working Group must have 67% of its members voting (10 out of 15 members) with a super majority (7 out of 10, 8 out of 11 or 12, 9 out of 13, 10 out of 14, or 11 out of 15) supporting adoption.

- a) [These interpretations are effective upon Working Group adoption, unless stated otherwise, and shall be reported to the Accounting Practice and Procedures \(E\) Task Force as part of its public report during the next NAIC national meeting \(or earlier if applicable\). In circumstance where the Working Group adopts an interpretation \(which creates new SAP or conflicts with existing SSAPs\) that is controversial in nature \(i.e., due to regulator or industry feedback or could have a policy level impact\), the Working Group may elect to postpone the effective date until the item has been discussed by the Task Force and the Financial Condition \(E\) Committee and both have had an opportunity to review the interpretation.](#)
- b) These interpretations can be ~~adopted~~ overturned, amended or deferred by a two-thirds majority of the Task Force membership. [For clarification, a two-thirds majority of the Task Force requires two-thirds of entire Task Force membership, not just those electing to vote. Additionally, interpretations can be overturned, amended, deferred, or referred to either the Task Force and/or the Working Group by a simple majority of the Financial Condition \(E\) Committee.](#)

Modification of Existing SSAP	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Description of Issue:

This agenda item intends to clarify the definition and application of prescribed practices. This issue has been presented in response to questions received on existing references in the NAIC *Accounting Practices & Procedures Manual* (AP&P). In summary:

- Each state insurance department has the authority to regulate any insurance company that is licensed in their state. The AP&P Manual is not intended to preempt states’ legislative and regulatory authority.
- The financial statements filed with the NAIC and subject to independent audit, pursuant to *Model Law 205: Annual Financial Reporting Model Regulation* shall be in accordance with practices prescribed or permitted by the domiciliary state.
- However, in addition to the financial statements required by the domiciliary state, a non-domiciliary state in which the company is licensed may require an insurer to file supplemental financial information that require or allow the use of different accounting practices in the supplementary filing than provided [for] in the AP&P manual. ~~in the financial statements filed in that state. Ideally, T~~o prevent reporting entities from having to file ~~different~~ financial statements or reports prepared on different basis of accounting with differ~~nting~~ states, the practices permitted or prescribed by a domiciliary state will be accepted in all states in which a company is licensed. However, as noted above, the provisions of the AP&P Manual are not intended to preempt states’ legislative or regulatory authority. Accordingly, each state in which a company is licensed could ~~allow or~~ require supplemental financial information that required or allows statutory accounting practices that differ from the AP&P manual. ~~differing financial reports~~. If a non-domiciliary state in which the company is licensed requires or allows a practice by state statute / bulletin (or other state-wide provision) in such supplemental financial information that is different from NAIC SAP, that practice (s) this provision is also considered a prescribed practice. If the company files financial statements that reflect this practice, even if the financial statements are filed only in the non-domiciliary state, then the prescribed practice disclosure of Note 1 shall apply.

Examples of two possible situations:

Scenario 1: Non-domiciliary State A issues a state statute / bulletin that requires the filing of supplemental financial information and which requires the use of an prescribed accounting practice for all companies that are licensed and doing business within State A. Domiciliary State B does not issue a comparable state statute / bulletin.

Scenario 1 Conclusion: The reporting entity shall file statutory financial statements with their domiciliary state and the NAIC in accordance with the statutory accounting practices permitted or prescribed by the domiciliary state (State B). (These financial statements would be subject to the independent audit requirements per Model 205.) The reporting entity also shall file supplemental financial information ~~separate financial statements~~ with State A in accordance with the accounting

practice mandated by that non-domiciliary state but shall also include the prescribed practice disclosure of Note 1 in the supplemental financial information.

Scenario 2: Non-domiciliary State A issues a state statute / bulletin that allows an accounting practice for all companies that are licensed and doing business within State A. Domiciliary State B does not issue a comparable state statute / bulletin.

Scenario 2 Conclusion: The reporting entity shall file statutory financial statements with their domiciliary state and the NAIC in accordance with the statutory accounting practices permitted or prescribed by the domiciliary state (State B). (These financial statements would be subject to the independent audit requirements per Model 205.) The reporting entity then has the ability, but is not required, to file supplemental financial information ~~statements~~ in State A that reflects the accounting practice prescribed by that non-domiciliary state and shall include the prescribed practice disclosure of Note 1 in the supplemental financial information.

Existing Authoritative Literature:

Preamble

12. Codification is not intended to preempt state legislative and regulatory authority. While Codification is expected to be the foundation of a state's statutory accounting practices, it may be subject to modification by practices prescribed or permitted by a state's insurance commissioner. Statutory financial statements will continue to be prepared on the basis of accounting practices prescribed or permitted by the states. As a result, in 1998 the AICPA's Insurance Companies Committee determined that it will not be necessary for the Auditing Standards Board to grant the Codification status as an OCBOA since it will not be the sole basis for preparing statutory financial statements. Further, auditors will be permitted to continue to provide audit opinions on practices prescribed or permitted by the insurance department of the state of domicile.

Preamble Questions and Answers

Permitted Practices Advance Notification Requirement – Implementation Questions and Answers

2. Q: What is the difference between a permitted accounting practice and a prescribed practice?

A: **Permitted** accounting practices include practices specifically requested by an insurer that depart from NAIC Statutory Accounting Principles (SAP) and state prescribed accounting practices, as described below, and have received approval from the insurer's domiciliary state regulatory authority.

Prescribed accounting practices are those practices that are incorporated directly or by reference by state laws, regulations and general administrative rules applicable to all insurance enterprises domiciled in a particular state. The NAIC AP&P Manual is not intended to preempt states' legislative and regulatory authority.

If a reporting entity requests an accounting practice that differs from state prescribed accounting practices, but is in accordance with NAIC SAP, advance notice of approval is not required.

The NAIC Model laws do not contain a definition of “prescribed practice,” but references to prescribed practices are noted in the Model laws below. These are provided as reference. There are no revisions proposed to the Model Laws:

Model 205 – Annual Financial Reporting Model Regulation**Section 6 - Designation of Independent Certified Public Accountant**

B. The insurer shall obtain a letter from the accountant, and file a copy with the commissioner stating that the accountant is aware of the provisions of the insurance code and the regulations of the Insurance Department of the state of domicile that relate to accounting and financial matters and affirming that the accountant will express his or her opinion on the financial statements in terms of their conformity to the statutory accounting practices prescribed or otherwise permitted by that Insurance Department, specifying such exceptions as he or she may believe appropriate.

Model 450 – Insurance Holding Company System Model Regulation with Reporting Forms and Instructions**Item 12. Financial Statements and Exhibits**

The annual financial statements of the applicant shall be accompanied by the certificate of an independent public accountant to the effect that such statements present fairly the financial position of the applicant and the results of its operations for the year then ended, in conformity with generally accepted accounting principles or with requirements of insurance or other accounting principles prescribed or permitted under law. If the applicant is an insurer which is actively engaged in the business of insurance, the financial statements need not be certified, provided they are based on the Annual Statement of the person filed with the insurance department of the person's domiciliary state and are in accordance with the requirements of insurance or other accounting principles prescribed or permitted under the law and regulations of the state.

Model 785 – Credit for Reinsurance Model Law**Section 4. Qualified U.S. Financial Institutions**

4.c. Maintains at least \$250 million in capital and surplus when determined in accordance with the NAIC Accounting Practices and Procedures Manual, including all amendments thereto adopted by the NAIC, excluding the impact of any permitted or prescribed practices; and is.

Model 787 – Term and Universal Life Insurance Reserve Financing Model Regulation**Section 6. The Actuarial Method****B. Valuation used for Purposes of Calculations**

For the purposes of both calculating the Required Level of Primary Security pursuant to the Actuarial Method and determining the amount of Primary Security and Other Security, as applicable, held by or on behalf of the ceding insurer, the following shall apply: (1) For assets, including any such assets held in trust, that would be admitted under the NAIC Accounting Practices and Procedures Manual if they were held by the ceding insurer, the valuations are to be determined according to statutory accounting procedures as if such assets were held in the ceding insurer's general account and without taking into consideration the effect of any prescribed or permitted practices; and

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group: None.

Convergence with International Financial Reporting Standards (IFRS): Not Applicable

Staff Recommendation:

NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive, and expose proposed revisions to the Preamble Implementation Questions and Answers to clarify prescribed practices. These revisions clarify that while any state in which a company is licensed can issue prescribed practices, the prescribed practices directed by the domiciliary state shall be reflected in the financial statements filed with the NAIC and are the financial statements subject to the independent auditor requirements. (NAIC staff do not believe revisions are necessary to paragraph 12 of the Preamble as that guidance does not limit practices to the domiciliary state and already confirms that the domiciliary state practices shall be reflected in the financial statements subject to audit. For reference paragraph 12 is below.)

12. Codification is not intended to preempt state legislative and regulatory authority. While Codification is expected to be the foundation of a state's statutory accounting practices, it may be subject to modification by practices prescribed or permitted by a state's insurance commissioner. Statutory financial statements will continue to be prepared on the basis of accounting practices prescribed or permitted by the states. As a result, in 1998 the AICPA's Insurance Companies Committee determined that it will not be necessary for the Auditing Standards Board to grant the Codification status as an OCBOA since it will not be the sole basis for preparing statutory financial statements. **Further, auditors will be permitted to continue to provide audit opinions on practices prescribed or permitted by the insurance department of the state of domicile.**

Proposed Revisions to the Preamble Questions and Answers:**2. Q: What is the difference between a permitted accounting practice and a prescribed practice?**

A: **Permitted** accounting practices include practices specifically requested by an insurer that depart from NAIC Statutory Accounting Principles (SAP) and state prescribed accounting practices, as described below, and have received approval from the insurer's domiciliary state regulatory authority.

Prescribed accounting practices are those practices that are incorporated directly or by reference by state laws, regulations and general administrative rules applicable to all insurance enterprises domiciled and/or licensed in a particular state. The NAIC AP&P Manual is not intended to preempt states' legislative and regulatory authority. Prescribed accounting practices of the domiciliary state shall be reflected in the statutory financial statements filed with the NAIC. Non-domiciliary states may additionally require insurance entities licensed in their state to file financial statements in accordance with the prescribed accounting practices of that particular non-domiciliary state.

If a reporting entity requests an accounting practice that differs from state prescribed accounting practices, but is in accordance with NAIC SAP, advance notice of approval is not required.

Staff Review Completed by:

Julie Gann - NAIC Staff
July 2020

Status:

On November 12, 2020, the Statutory Accounting Principles (E) Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed proposed revisions to the Preamble Implementation Questions and Answers to clarify prescribed practices, as illustrated above. These revisions clarify that while any state in which a company is licensed can issue prescribed practices, the prescribed practices directed by the domiciliary state shall be reflected in the financial statements filed with the NAIC and are the financial statements subject to the independent audit requirements.

On March 15, 2021, the Statutory Accounting Principles (E) Working Group adopted, as final, revisions to the Preamble Implementation Questions and Answers to clarify prescribed practices, as illustrated below. These

revisions clarify that while any state in which a company is licensed can issue prescribed practices, the prescribed practices directed by the domiciliary state shall be reflected in the financial statements filed with the NAIC and are the financial statements subject to the independent audit requirements.

NAIC staff note: In addition to the edits proposed to the authoritative guidance, interested parties recommended various edits to the body of this agenda item. While these additional edits do not further modify the authoritative guidance, NAIC staff recognized that agenda items are typically referenced for historical purposes. Accordingly, the additional recommended edits have been reflected and remain shown in the ‘description of issue’ section of this agenda item. These edits clarify the understanding that in addition to the financial statements required by the domiciliary state, a non-domiciliary state in which the company is licensed may require an insurer to file supplemental financial information that require or allow the use of different accounting practices in the supplementary filing than as is required in the AP&P manual.

Preamble Implementation Questions and Answers Adopted Revisions:

2. Q: What is the difference between a permitted accounting practice and a prescribed practice?

A: **Permitted** accounting practices include practices specifically requested by an insurer that depart from NAIC Statutory Accounting Principles (SAP) and state prescribed accounting practices, as described below, and have received approval from the insurer’s domiciliary state regulatory authority.

Prescribed accounting practices are those practices that are incorporated directly or by reference by state laws, regulations and general administrative rules applicable to all insurance enterprises domiciled and/or licensed in a particular state. The NAIC AP&P Manual is not intended to preempt states’ legislative and regulatory authority. Prescribed accounting practices of the domiciliary state shall be reflected in the statutory financial statements filed with the NAIC. Non-domiciliary states may additionally require insurance entities licensed in their state to file supplementary financial information that details the use of different accounting practices required or allowed by the non-domiciliary state that differs from the AP&P Manual.

If a reporting entity requests an accounting practice that differs from state prescribed accounting practices, but is in accordance with NAIC SAP, advance notice of approval is not required.

Issue: ASU 2020-06 - Convertible Instruments

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Description of Issue: *ASU 2020-06, Debt—Debt with Conversion and Other Options (Subtopic 470-20) and Derivatives and Hedging—Contracts in Entity’s Own Equity (Subtopic 815-40), Accounting for Convertible Instruments and Contracts in an Entity’s Own Equity* intends to address issues identified as a result of the complexity associated with applying U.S. generally accepted accounting principles (U.S. GAAP) for certain financial instruments with characteristics of liabilities and equity. Complexity associated with the accounting is a significant contributing factor to numerous U.S. GAAP financial statement restatements and has resulted in complexity for users attempting to understand the results of applying the current guidance.

Under current U.S. GAAP, there are five accounting models for convertible debt instruments. Except for the traditional convertible debt model that recognizes a convertible debt instrument as a single debt instrument, the other four models, with their different measurement guidance, require that a convertible debt instrument be separated (using different separation approaches) into a debt component and an equity or a derivative component. Convertible preferred stock also is required to be assessed under similar models. The amendments in ASU 2020-06 provide financial statement users with a simpler and more consistent starting point to perform analyses across entities. The amendments also improve the operability of the guidance and reduce, to a large extent, the complexities in the accounting for convertible instruments and the difficulties with the interpretation and application of the relevant guidance.

The amendments to the derivatives scope exception for contracts in an entity’s own equity change the population of contracts that are recognized as assets or liabilities. For a freestanding instrument, if the instrument qualifies for the derivatives scope exception under the amendment, an entity should record the instrument as equity. For an embedded feature, if the feature qualifies for the derivatives scope exception under the amendment, an entity should no longer bifurcate the feature and account for it separately.

ASU 2020-06 also provides updated guidance on earnings per share calculations.

Existing Authoritative Literature:

1. Earnings per share – Rejected as Not Applicable for Statutory Accounting:

The concept of earnings per share (Topic 260) has previously been reviewed with the following U.S. GAAP standards rejected as not applicable in *Appendix D—Nonapplicable GAAP Pronouncements*:

- *FASB Statement No. 128, Earnings per Share (FAS 128)*
- *EITF 07-04, Application of the Two-Class Method under FASB Statement No. 128 to Master Limited Partnerships*

2. Distinguishing Liabilities from Equity / Derivatives and Hedging:

SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets defines a liability with excerpts below:

Financial Instruments with Characteristics of both Liabilities and Equity

27. Issued, free-standing financial instruments with characteristics of both liability and equity shall be reported as a liability to the extent the instruments embodies an unconditional obligation of the issuer. (Pursuant to SSAP No. 86, embedded features in derivative contracts shall not be separated from the host contract for separate recognition.) Free-standing financial instruments that meet any of the criteria below meet the definition of a liability:

- a. A mandatorily redeemable financial instrument shall be classified as a liability unless the redemption is required to occur only upon the liquidation or termination of the issuing reporting entity.
- b. A financial instrument, other than an outstanding share, that at inception both 1) embodies an obligation to repurchase the issuer's equity shares or is indexed to such an obligation and 2) requires or may require the issuer to settle the obligation by transferring assets.
- c. Obligations that permit the holder to require the issuer to transfer assets.
- d. A financial instrument is a liability if the issuer must settle the obligation by issuing a variable number of its equity shares and the obligation's monetary value is based solely or predominantly on: 1) a fixed monetary amount, 2) variation in something other than the fair value of the issuer's equity shares, or 3) variations inversely related to changes in the fair value of the issuer's equity shares.
- e. Instruments in which the counterparty (holder) is not exposed to the risks and benefits that are similar to those of a holder of an outstanding share of the entity's equity shall be classified as a liability.

28. If a free-standing financial instrument will be redeemed only upon the occurrence of a conditional event, redemption of that instrument is conditional and, therefore, the instrument does not meet the definition of mandatorily redeemable financial instrument. However, that financial instrument shall be assessed each reporting period to determine whether circumstances have changed such that the instrument meets the definition of a mandatorily redeemable instrument (that is, the event is no longer conditional). If the event has occurred, the condition is resolved, or the event has become certain to occur, the financial instrument shall be reclassified as a liability.

29. The classification of a free-standing financial instrument as a liability or equity shall only apply to the instrument issuer. Holders or purchasers of such instruments shall refer to the appropriate investment statement for valuation and reporting.

SSAP No. 72—Surplus and Quasi-Reorganizations

Capital Stock

3. The articles of incorporation set forth the number of authorized shares of capital stock and the par value of each share. The capital stock account represents the number of shares issued times the par value of each share. When no par value is set forth, the reporting entity shall declare a "stated value" and record such amount in the capital stock account. Changes in the par value of a reporting entity's capital stock shall be reflected as a reclassification between the capital stock account and gross paid-in and contributed surplus. Issued, free-standing financial instruments with characteristics of both liability and equity shall be reported as a liability to the extent described in SSAP No. 5R.

*SSAP No. 104R—Share-Based Payments, Exhibit A – Classification Criteria: Liability or Equity***Mandatorily Redeemable Financial Instruments**

3. A mandatorily redeemable financial instrument shall be classified as a liability unless the redemption is required to occur only upon the liquidation or termination of the reporting entity.

4. A financial instrument that embodies a conditional obligation to redeem the instrument by transferring assets upon an event not certain to occur becomes mandatorily redeemable if that event occurs, the condition is resolved, or the event becomes certain to occur.

5. In determining if an instrument is mandatorily redeemable, all terms within a redeemable instrument shall be considered. The following items do not affect the classification of a mandatorily redeemable financial instrument as a liability:

- a. A term extension option
- b. A provision that defers redemption until a specified liquidity level is reached
- c. A similar provision that may delay or accelerate the timing of a mandatory redemption.

6. If a financial instrument will be redeemed only upon the occurrence of a conditional event, redemption of that instrument is conditional and, therefore, the instrument does not meet the definition of mandatorily redeemable financial instrument in this statement. However, that financial instrument would be assessed at each reporting period to determine whether circumstances have changed such that the instrument now meets the definition of a mandatorily redeemable instrument (that is, the event is no longer conditional). If the event has occurred, the condition is resolved, or the event has become certain to occur, the financial instrument is reclassified as a liability.

Obligations to Repurchase Issuer's Equity Shares by Transferring Assets

7. An entity shall classify as a liability (or an asset in some circumstances) any financial instrument, other than an outstanding share, that, at inception, has both of the following characteristics:

- a. It embodies an obligation to repurchase the issuer's equity shares, or is indexed to such an obligation, and
- b. It requires or may require the issuer to settle the obligation by transferring assets.

8. In this statement, "indexed to" is used interchangeably with "based on variations in the fair value of." The phrase "requires or may require" encompasses instruments that either conditionally or unconditionally obligate the issuer to transfer assets. If the obligation is conditional, the number of conditions leading up to the transfer of assets is irrelevant.

9. Examples of financial instruments that meet the criteria in paragraph 7 of this Exhibit include forward purchase contracts or written put options on the issuer's equity shares that are to be physically settled or net cash settled.

10. All obligations that permit the holder to require the issuer to transfer assets result in liabilities, regardless of whether the settlement alternatives have the potential to differ.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): The Working Group addressed similar issue in agenda item 2019-43, and adopted language that was included in the "Existing Authoritative Literature" section, primarily in SSAP No. 5R.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group:
None

Convergence with International Financial Reporting Standards (IFRS): N/A**Staff Recommendation:**

NAIC staff recommends the Working Group move this item to the active listing, categorized as nonsubstantive, and expose revisions to SSAP No. 5R, SSAP No. 72 and SSAP No. 86 to reject *ASU 2020-06, Debt—Debt with Conversion and Other Options (Subtopic 470-20) and Derivatives and Hedging—Contracts in Entity’s Own Equity (Subtopic 815-40), Accounting for Convertible Instruments and Contracts in an Entity’s Own Equity* for statutory accounting as this update primarily addresses various convertible debt valuation models (a concept not employed by statutory accounting) as well as require bifurcating embedded derivative components (a concept not permitted under statutory accounting).

Staff Review Completed by:

Jake Stultz, NAIC Staff – September 2020

Status:

On November 12, 2020, the Statutory Accounting Principles (E) Working Group moved this item to the active listing, categorized as nonsubstantive, and exposed revisions to *SSAP No. 5R—Liabilities, Contingencies and Impairments of Assets*, *SSAP No. 72—Surplus and Quasi-Reorganizations* and *SSAP No. 86—Derivatives*, to reject *ASU 2020-06, Debt—Debt with Conversion and Other Options (Subtopic 470-20) and Derivatives and Hedging—Contracts in Entity’s Own Equity (Subtopic 815-40), Accounting for Convertible Instruments and Contracts in an Entity’s Own Equity* for statutory accounting, as illustrated below.

Issue: *ASU 2020-07 - Presentation and Disclosures by Not-for-Profit Entities*

Check (applicable entity):

	P/C	Life	Health
Modification of Existing SSAP	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>	<input checked="" type="checkbox"/>
New Issue or SSAP	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Interpretation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Description of Issue: *ASU 2020-07, Not-for-Profit Entities (Topic 958), Presentation and Disclosures by Not-for-Profit Entities for Contributed Nonfinancial Assets* intends to improve U.S. generally accepted accounting principles (U.S. GAAP) by increasing the transparency of contributed nonfinancial assets for not-for-profit (NFP) entities through enhancements to financial statement presentation and disclosure. The amendments address stakeholder input concerning the lack of transparency about the measurement of contributed nonfinancial assets recognized by NFPs, as well as the amount of those contributions used in an NFP's programs and other activities. These updates provide minor changes to U.S. GAAP disclosures for not-for-profit entities and require that contributed nonfinancial assets be reported on a separate line item in the statement of activities, apart from contributions of cash and other financial assets.

Existing Authoritative Literature: Disclosure requirements are included in most SSAPs, but none are specific to only not-for-profit entities.

Activity to Date (issues previously addressed by the Working Group, Emerging Accounting Issues (E) Working Group, SEC, FASB, other State Departments of Insurance or other NAIC groups): None.

Information or issues (included in *Description of Issue*) not previously contemplated by the Working Group: None

Convergence with International Financial Reporting Standards (IFRS): None

Staff Recommendation: NAIC staff recommends that the Working Group move this item to the active listing, categorized as nonsubstantive, and expose revisions to *Appendix D—Nonapplicable GAAP Pronouncements to reject ASU 2020-07, Not-for-Profit Entities (Topic 958), Presentation and Disclosures by Not-for-Profit Entities for Contributed Nonfinancial Assets* as not applicable to statutory accounting.

This item is proposed to be rejected as not applicable as ASU 2020-07 is specific to not-for-profit entities, which for statutory accounting purposes are not subject to different disclosure treatment than other entity types.
